Report Submitted to:

Professor Jefferson Alex Sphar

Professor Padini Nirmal

Doctor Benoît Jacquet

This report represents work of one or more WPI undergraduate students submitted to the faculty as evidence of a degree requirement. WPI routinely publishes these reports on its web site without editorial or peer review.

Abstract

The historic district of Kikuhama in Kyoto stands at an important crossroads. It faces profound challenges in balancing preservation of its rich cultural heritage with modernization and sustainable revitalization plans. As younger residents continue moving out, properties are being repurposed into short-term guest houses and hotels, leading to a burgeoning of vacant and deteriorating buildings that pose urban risks. At the same time, most of Kikuhama struggles to integrate tradition and innovation in a harmonious manner that retains its authentic essence.

This project utilizes robust methodology combining demographic census data analysis, geospatial mapping technology, and in-depth interviews with community members representing diverse generational perspectives. Key findings reveal a 10.7% population decline and demographic shifts towards an aging population over the past decade, even as Kyoto city continues a slower decrease in population. Locals express a difference of views on the area as a whole.

As Kikuhama navigates these pivotal socioeconomic transformations, this study spotlights how sustained community-engaged research and extensive local stakeholder collaboration remain vital to ensuring culturally-attuned, sustainable revitalization upholding Kikuhama's essence. Enabling inclusive community-driven commerce and productive use of vacant properties can lead Kikuhama towards a flourishing future.

Acknowledgements

We extend our heartfelt gratitude to our project sponsor, Benoît Jacquet, whose unwavering support and guidance were instrumental in shaping the success of this project. His expertise and dedication to our endeavor have been truly invaluable, and we are immensely grateful for his involvement.

Furthermore, we wish to express our profound appreciation to our esteemed IQP advisors, Professor Alex Sphar and Professor Padini Nirmal. Their commitment to our project was evident in the countless hours they devoted to advising us, offering their wisdom, and fostering an environment of intellectual growth.

The combined efforts of our project sponsor and advisor have been indispensable throughout this journey, and we acknowledge their pivotal roles in helping us attain our project goals. Their support and mentorship have been invaluable assets, and we are truly fortunate to have had the privilege of working with such outstanding individuals.

Executive Summary

Kikuhama, a historic district in Kyoto, Japan, stands at a pivotal juncture. As younger residents depart the neighborhood, properties are being converted into short-term rental accommodations like guesthouses and Airbnbs. This leads to vacant, deteriorating buildings that pose risks including increased crime, trash, and community anxiety. Kikuhama currently struggles to balance preserving its cultural heritage with modernization and sustainable revitalization plans.

This research project aims to develop an equitable framework aligning sustainability, community values, and cultural preservation for Kikuhama's future. We draw insights from Barcelona's Gothic Quarter, where medieval architecture has been successfully adapted alongside modern businesses, as an exemplar case study of harmonic revitalization.

Our robust methodology utilizes multiple data sources including demographic census analysis, geospatial mapping technology, and in-depth interviews with community members encompassing diverse perspectives. This multi-pronged approach enables a nuanced understanding of Kikuhama's current state and evolving trajectory within broader Kyoto development patterns.

The specific objectives are as follows:

1. To conduct an assessment of the Kikuhama district to gain an in-depth understanding of its current demographic composition and dynamics.
2. To take a visual inventory of the Kikuhama district, and document any findings.
3. To create a digital visual overview of Kikuhama and share it through a website

To conduct an assessment of the Kikuhama district to gain an in-depth understanding of its current demographic composition and dynamics we thoroughly reviewed past literature and data on topics related to urban change, tourism, and the effects of empty lots on communities. A summary of our key findings from this review can be found on page 13 of our report. In addition to reviewing past literature, we analyzed census data to understand demographic trends in Kikuhama's population and conducted interviews with members of the neighborhood. To take a visual inventory of the Kikuhama district, and document any findings we systematically

cataloged the type of each structure and lot in the area using maps. This data was then stored in a multitude of spreadsheets to ensure it stayed organized. To create a digital visual overview of Kikuhama and share it through a website, a virtual map of the district was created using QGIS. Our digital Kikuhama map compiles all the visual data we gathered into one easily accessible overview of the district. This has been published to a public open source website for all to access.

Key census findings reveal an intriguing population decline and shifting household demographics in Kikuhama over the past decade, aligning with the steady overall growth observed in Kyoto city during the same period. Interviews with locals highlight diverse sentiments on the area's history, challenges, and aspirations for the future. Comparisons of building usage data over several years emphasize dynamic changes underway in Kikuhama's architectural landscape.

The analysis brings to light demographic shifts, including an aging population and reduction in average household size. There has also been a sharp rise in abandoned buildings as younger residents move out, leading to urban decay. However, heritage sites continue being relatively well-preserved. Integration of tradition and modernity remains a key challenge, as does managing tourism amid revitalization.

As Kikuhama experiences profound socio-economic transformations, this study underscores that ongoing community-engaged research and extensive stakeholder collaboration are vital to ensure culturally-attuned, holistic, and equitable sustainable development plans are designed and implemented. By embracing the locale's rich history while innovating inclusively, Kikuhama can progress towards a more flourishing future.

We recommend that future mapping projects in Kikuhama build upon the foundation we have established this year in systematically cataloging and visualizing this area. Specifically, teams should focus efforts on the same geographical bounds, utilize consistent categorical schematics for documenting lot attributes, and capture updated photographic records.

Advance preparation in techniques and technologies relevant to urban mapping is highly advisable prior to field work. Software platforms like ArcGIS and QGIS offer powerful functionalities for spatial data management and analysis that teams should get acquainted with. Additionally, developing a strong theoretical grasp of leading urban mapping principles and methodologies will enhance contextual understanding.

For on-site mapping procedures, globally recognized iconographic conventions should be adopted for map symbols denoting distinct building types. High-resolution, wide angle photographic documentation will prove invaluable in representing the narrow streetscapes. Segmenting the terrain into localized clusters for hand-documentation onto printed base maps first may optimize efficiency in capture efforts.

With sustained diligence in adding each year's new learnings to the knowledge base via consistent documentation approaches, the longitudinally evolving visual information system on Kikuhama will become an increasingly valuable community asset.

Chapter 1: Introduction

In the bustling heart of Kyoto, nestled between the graceful flow of the Kamogawa river and the historic Takasegawa canal, lies the district of Kikuhama. A place steeped in history, Kikuhama has borne witness to centuries of cultural evolution, its streets echoing with tales of Japan's past. However, in recent years, winds of change have begun to sweep through this venerable neighborhood, prompting a careful reevaluation of its future. As we embark on this journey to understand and shape the destiny of Kikuhama, we find ourselves at the intersection of tradition and modernization, sustainability and progress, preservation of cultural heritage, and the cherished values of a vibrant community.

As many locals sell their properties and move away, the opportunity to repurpose these spaces into guest houses and hotels arises (Fujitsuka, 2004). While some older residents choose to stay, the decrease in homeownership has led to a proliferation of vacant houses and lots. These empty properties not only weigh upon the area but also pose potential risks such as increased crime, excessive trash, rodent infestations, and heightened community anxiety (Garvin, 2013).

The essence of Kikuhama's appeal lies in the delicate equilibrium between preserving its rich cultural heritage and historical charm while simultaneously embarking on a sustainable revitalization journey. Our aim is to ensure that the unique character and tight-knit sense of community in Kikuhama remain at the forefront, even in the face of modernization.

Figure 1.1: Takasegawa Shomen Children's Park in Kikuhama (Google Earth, 2022)

Unfortunately, most of Kikuhama grapples with the imbalance between tradition and progress, presenting the formidable challenge of coming up with a plan that harmonizes these

aspects. This challenge leads us to look around the world to draw inspiration from places where cities have grappled with similar challenges and opportunities.

Barcelona's Gothic Quarter also offers valuable insights into the challenges and opportunities of preserving historical districts while adapting to modern demands. Facing challenges similar to those in Kyoto, Barcelona's Gothic Quarter had to address the growing influx of tourists while also preserving its historical character (Roberts, 2019). However, it emerged from these pressures with a model that harmoniously integrates centuries-old architecture with modernity.

In this enchanting neighborhood, you will find Gothic structures dating back to the Middle Ages coexisting seamlessly with a vibrant street life, trendy boutiques, and modern cafes (Figure 1.7). The meticulous preservation efforts in this district have effectively transformed into a living museum, where contemporary businesses thrive within the embrace of historic structures. The result is a district that not only flourishes economically through tourism but also manages to preserve its cultural integrity (Gant, 2014).

Figure 1.2: Canonical House reconstructed by Jeroni Martorell (1300)

Figure 1.3: Royal Square in Barcelona by Kristina Spisakova (2017)

The district of Kikuhama stands at a crossroads of tradition and modernity, history, and progress. As we embark on this transformative journey, drawing inspiration from the alleys of

Barcelona's Gothic Quarter, we are guided by the profound lessons of sustainable preservation and community engagement. These global narratives serve as beacons illuminating the path forward for Kikuhama. By embracing our cultural heritage and empowering our community, we aim not just to preserve the echoes of our past but to weave them into a vibrant, sustainable future. Through collaborative efforts, adaptive reuse, and unwavering community spirit, we endeavor to create a Kikuhama that cherishes its history while embracing the promise of a flourishing tomorrow

Chapter 2: Background and Literature Review

This chapter explores the main research topics that we studied in order to understand the scope of our project. We researched the history of Japan and Kikuhama, urban revitalization strategies, and the impacts of tourism on neighborhoods and communities. These topics are outlined in detail in this chapter.

To understand the historical context, we delved into Japan's rich history to understand the city of Kyoto and the distinctive character of Kikuhama (Section 2.1). To gain a deeper understanding of the architectural backdrop shaping our project, we examined Japanese architecture and the housing challenges presented in Kikuhama (Section 2.2). Understanding the intricacies of urban planning was imperative, and we researched topics such as sustainable development, mapping, the complexities of gentrification, and the evolving landscape of neoliberal policies (Section 2.3). Lastly, recognizing the pivotal role of tourism in Kikuhama's future, we conducted an analysis of the drivers of tourism, explored the phenomenon of tourism gentrification, and dissected the specific dynamics that influence Kyoto's tourism sector (Section 2.4).

By understanding these background topics, we aim to equip ourselves with the essential knowledge and context needed to navigate the challenges and opportunities that lie ahead, ultimately working towards a Kikuhama that thrives as a testament to both its history and its potential for revitalization.

2.1 Introduction to Japan

2.1.1 History of Japan

The history of Japan unfolds as a captivating saga of resilience, and cultural transcendence. From its early origins shrouded in myth to the harrowing aftermath of World War II, Japan's historical narrative embodies the pursuit of identity, adaptation, and progress. Through each epoch, Japan emerges as a mosaic of tradition and modernity, offering insights into the complex interplay between a nation's heritage and its evolving place in the global arena.

The Meiji Restoration: Guided by Emperor Meiji, the Meiji era brought about a period of profound modernization and reform (Urushima, 2019). It saw the abandonment of feudal

structures that had bound Japan for centuries, replacing them with a merit-based system. The samurai relinquished their swords, and regional lords ceded power to a centralized government led by an emperor (Huffman, 2003). Land reforms and industrialization reshaped Japan's agrarian landscape and propelled it into the modern age. The Meiji Restoration not only transformed Japan's political landscape but also paved the way for its emergence as a global player.

Post World War II Resilience: The mid-20th century presented Japan with unprecedented challenges as it emerged from the ruins of World War II. In 1945, Japan found itself under Allied occupation, which oversaw significant changes in the country's political and societal structure (Office of the Historian, n.d.). Constitutional reforms, rooted in democratic ideals, breathed new life into a society recovering from militarism. The once-powerful Japanese military was disbanded, setting the stage for an era of peace and prosperity.

The subsequent decades witnessed a remarkable period of recovery and growth often referred to as the "Japanese Economic Miracle" (Shiohara, 2023). Japan, driven by unwavering determination, embarked on a rapid journey of post-war reconstruction. In less than a decade, the country's devastated infrastructure was rebuilt, and industries, particularly manufacturing and technology, propelled Japan to become an economic powerhouse.

This historical context sets the stage for our project in Kikuahama, which focuses on urban revitalization in the Kikuahama district of Kyoto. Understanding Japan's journey from ancient times to its post-World War II resurgence provides valuable insights into the societal and economic transformations that have shaped the region. Japan's transformation from Feudal times to the Meiji Restoration highlights the establishment of new industries and changes in land use (*Land Chapter | 水土里の軌跡*, n.d.) and post World War II reconstruction efforts changed the economy and workforce of the area (Hashizume, 2021). This historical perspective not only enhances our understanding of the region but serves as a guiding beacon for our urban revitalization project, offering insights into the nuanced challenges and opportunities that lie ahead.

2.1.2 History and Culture of Kyoto

The heart of Japan, Kyoto, is more than a city; it is a living testament to the interplay of history, culture, and tradition. With a legacy spanning over a thousand years as the imperial

capital, Kyoto stands as a veritable time capsule, where the modern world converges harmoniously with the rich tapestry of the past. The city, filled with ancient temples and preserved customs offers insights into the depth and allure of this captivating city.

Significance as Japan's Capital: In the annals of Japanese history, 794 C.E. emerges as a pivotal moment. It was during this year that Emperor Kammu (Kanmu) designated Kyoto as the capital, christening it “Heian-kyo”, which translates to “Capital of Peace and Tranquility” (Cartwright, 2017). The selection of Kyoto as the imperial seat heralded an era of cultural renaissance. This city became the epicenter of artistic and cultural innovation, where poetry, literature, and the performing arts flourished (Cary, 2017). Kyoto cultivated courtly etiquette and the Japanese way of life, carving its identity as a fountain of culture. Even when Kyoto was no longer Japan's administrative capital, it remained the ceremonial and spiritual heart of the nation.

Preservation Efforts: Kyoto's commitment to preserving its rich heritage transcends duty; it is a sacred vow to history itself. As the guardian of Japan's cultural treasures, the city bears a weighty responsibility: ensuring the protection of these riches for generations to come.

Kyoto's commitment to preserving the authenticity of its historical districts, such as Gion and Higashiyama, is evident through meticulous conservation efforts that uphold the charm of the past (Traditional Kyoto, 2023). Stringent regulations govern every aspect of these districts' aesthetics, dictating everything from the colors adorning their facades to the materials used in renovations (Nishimura, 2020). Despite these preservation initiatives, Kyoto faces contemporary challenges, notably illustrated by debates surrounding a proposed 20-story, 5-star hotel in the central business district (Nakasendoway, 2021). Traditionalists express concerns that such a development could disrupt Kyoto's ambiance and harm its character, with temples sharing worries about the visual impact on the city's skyline. To navigate these challenges, Kyoto has enacted preservation laws. One of the laws enacted was the 1966 Ancient Capitals Preservation Law by which historically valuable old shrines, temples and monuments that are in harmony with their vicinities were designated as Historical Climate Preservation District, aiming to guide urban development and strike a delicate balance between tradition and modernity (Ikebe, 2012).

Among Kyoto's remarkable preservation successes are its UNESCO World Heritage Sites, including treasures like the Golden Pavilion (Kinkaku-ji). These sites have undergone preservation and restoration efforts, providing the world a glimpse into Japan's history (Hays,

2018). These endeavors safeguard both tangible and intangible heritage, while paying homage to the past as it coexists with the present and looks towards the future.

Chō (neighborhood associations): During the Sengoku period in the 16th century, the neighborhood association of Kyoto, or chō, emerged as an important institution in Kyoto as the city grew rapidly and economic activity flourished after a long period of war (Kobayashi, 2017). Each chō has its own rules, called chō shikimoku or chō sadame, covering property transactions, rituals, festivals, and dispute resolution. These rules adapted over time. The system persisted through the Meiji Restoration in 1868 and evolved into a municipal structure with neighborhood representatives (chō toshiyori) later becoming chō sodai (Tanwattana, 2012). In 1897, Public Agreement Associations (kōdō kumiai) were established within chō to manage functions like firefighting and sanitation. During the early 20th century, the nationwide neighborhood association system (chōnaikai) was modeled after Kyoto's chō for wartime efficiency. After WWII, chōnaikai was dissolved due to its militaristic history, but neighborhood groups reformed (Ajisaka, 2000).

Today, Kyoto's chō remain semi-formal community organizations, preserving traditions, facilitating events, liaising with authorities, and supporting local initiatives (Japan Living, 2023). They have adapted over time, showcasing local autonomy and resilience.

Tourism: Kyoto exemplifies the tension between preserving history and modernizing for tourism. After WWII, groups formed to protect historical sites, and laws were passed. But many significant sites were still destroyed in the name of modernization, actually hurting the tourist industry. (Horita, 2017). As seen in Figure 2.1, quite a few tourist areas are concentrated within a small area in Kyoto. While some areas have added tourist-focused shops and restaurants, these changes are minor compared to losing heritage sites. With over 2 million foreign tourists annually (Inoue, 2023), Kyoto cannot completely resist modernization from tourism. But through regulations, the city has minimized damage to its history and culture. Kyoto strives to find balance as a historical landmark as well as a modern tourist destination.

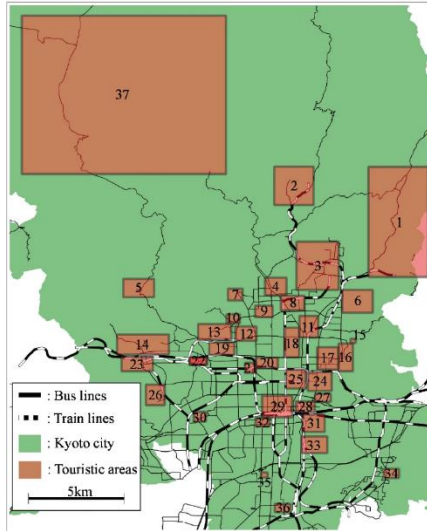

Figure 2.1: Touristic areas in Kyoto city (Tomoki Nishigaki et al., 2023)

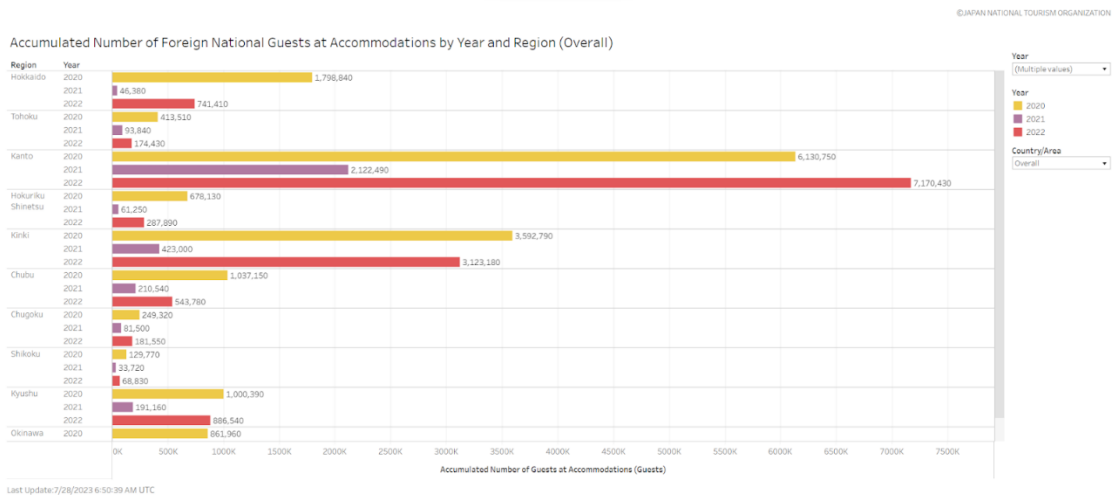

Figure 2.2: Accumulated Number of Foreign National Guests at Accommodations by Year and Region (Japan National Tourism Organization, 2023)

2.1.3 Kikuhama, District of Kyoto

Situated adjacent to the tranquil Kamo River of Kyoto's eastern region, the district of Kikuhama emerges as an intriguing subject for scholarly investigation. Frequently eclipsed by its more celebrated counterparts, Kikuhama's appeal resides in its subtle yet profound significance, representing a locus embodying the enduring resilience of Kyoto's cultural identity.

Historical Significance: Kikuhama is part of Kyoto's Shimogyo ku, and its historical roots trace back to an era when it was a notorious red-light district, a name that once carried the weight of illicit dealings and the shadowy presence of the Yakuza, Japan's organized crime

syndicate (Japan Experience, n.d.). The district was a hub for brothels and clandestine operations, casting a cloud of notoriety over the area.

The Hashimoto Yukaku district, like Kikuhama, was also a red light district under the control of the Yakuza for much of its history. The residents of the Hashimoto district, to this day, keep its past under covers. In an interview, a 79-year-old resident of the district said, “There is no need to remind our children of the past. Some residents do not want people to know about it” (The Nation, 2023). This sentiment is shared by residents of previous red-light districts all around Kyoto. Professor Akira Ide from Kanazawa University explains that the reason why it is so difficult to preserve and study yukaku history is because these areas are so controversial to Japanese history. These were places with the shadow of their criminal past imprinted in their walls, and because of this, the townscape of these districts is being replaced by ordinary houses and parking lots (The Nation, 2023).

Current Kyoto and Kikuhama: Today, Kyoto is a bustling metropolis, home to over 1.5 million residents, making it one of Japan’s largest cities (City Population, 2022). In recent years, Kyoto has grappled with the challenges of modernization and tourism. Efforts have been made to reduce clutter and regulate building designs since 2007 through the Miyako Landscape Guidelines, seeking a balance between the preservation of Kyoto’s cultural heritage and the demands of a modern urban center (Garnelis et al, 2020). Figure 2.3 shows the difference between a Family Mart sign in Kyoto vs. in other places around Japan. The Family Mart sign in Kyoto does not boast its brand’s loud colors and is instead in the brown/white color palette as described in the Miyako Landscape Guidelines. Kyoto’s enduring appeal lies in its ability to evolve while staying true and connected to its history.

Figure 2.3: Family Mart in Kyoto vs. Family Mart elsewhere in Japan by Victor Gusukuma (2020)

Currently, Kikuhama stands at a crossroads, poised for a transformative resurgence. With the implementation of urban revitalization efforts (Besch, 2019), the district has the

potential to transcend its historical stigma and embrace a brighter future. The vision for Kikuhama is one of sustainability, fostering a flourishing and close-knit community that breathes new life into this once-decaying neighborhood. By harnessing the district’s rich history and strategic location within Kyoto, Kikuhama has the opportunity to redefine itself as a desirable destination, where the echoes of its past are woven into a tapestry of modernity and cultural vitality.

2.2 Past IQP Data

Mapping Data: We can use the previous IQP’s mapping data to identify crucial buildings. There are two important datasets, the map created using computer aided design (*Figure 2.4 left*), and the data that categorizes each building on the map (*Figure 2.4 right*). Shown below is the breakdown of each category in which you can more accurately see the difference in data between 2019 and 2021.

Figure 2.4: Map of Kikuhama, and Data from the Map (WPI, 2021)

Evidently, there has been a reduction in the number of vacant lots, with some repurposed as active parking facilities and others developed into new structures. In contrast, the amount of closed buildings has increased. In parallel, the newly erected buildings on formerly vacant lots are expected to exhibit a departure from traditional design, leaning towards a more contemporary and modern aesthetic. Through a discerning examination of these categories, we gain insights into the prevailing architectural trajectory within the Kikuhama locale.

The 2021 IQP group was forced to map the Kikuhama area in Worcester due to the Covid pandemic. Because of this we will have to take their findings with a grain of salt. The amount of unknown buildings will throw off the rest of the buildings considering the discrepancies in other categories. For example, the 2019 IQP has approximately 100 more residences than the 2021 IQP. It is hard to believe that in 2 years 20% of the neighborhood's residents were either abandoned or repurposed. Because of this, the majority of the comparisons we will make will be between the 2019 and 2023 datasets.

2.3 Urban Planning

2.3.1 Sustainable Urban Development:

Urban landscapes worldwide in the 21st century transformation face complex challenges balancing sustainability, equity and resilience. Sustainable urban development provides an essential framework guiding growth to achieve social, economic and environmental goals. This approach promotes strategies like walkable neighborhoods, affordable and diverse housing, green transit, integrating nature, fostering community engagement and preserving heritage (Sustainable Urban Development, 2018). In the historic Kyoto district of Kikuhama, this project presents an opportunity to evaluate alignment with sustainability objectives. We can collect data assessing if recent growth is achieving equitable and resilient outcomes. Field observations, geospatial analysis, and community input can examine factors like housing diversity, transit access, green space, and cultural heritage. Comparing findings to sustainability benchmarks will help identify where Kikuhama currently falls short and inform proposals for improvement. Integrating traditional elements into revitalization will be key for honoring heritage. By linking to established sustainability criteria, the Kikuhama mapping aims to guide equitable urban growth amid rapid change.

2.3.2 Mapping

The rapid growth of informal settlements poses challenges for equitable urban mapping and development, as cadaster data often overlooks marginalized communities; however, as Gram-Hansen et al. demonstrate, machine learning and satellite imagery can help identify and analyze the needs of overlooked groups to direct aid (Gram-Hansen et al., 2019). In Kikuhama,

while informal settlements may not be a key focus, the mapping project could similarly leverage technology to represent the district inclusively. We can draw on the High Line example, where repurposing abandoned infrastructure into a public park catalyzed revitalization but also gentrification, showing how cities must balance improvements with protecting vulnerable residents (Diller et al., n.d.). Kikuhama's historic canal infrastructure represents an opportunity for adaptive reuse that uplifts the community, applying lessons on inclusion learned from the High Line. By guiding growth that sustains rather than displaces residents, the mapping project can help Kikuhama's diverse population benefit equitably from neighborhood improvements.

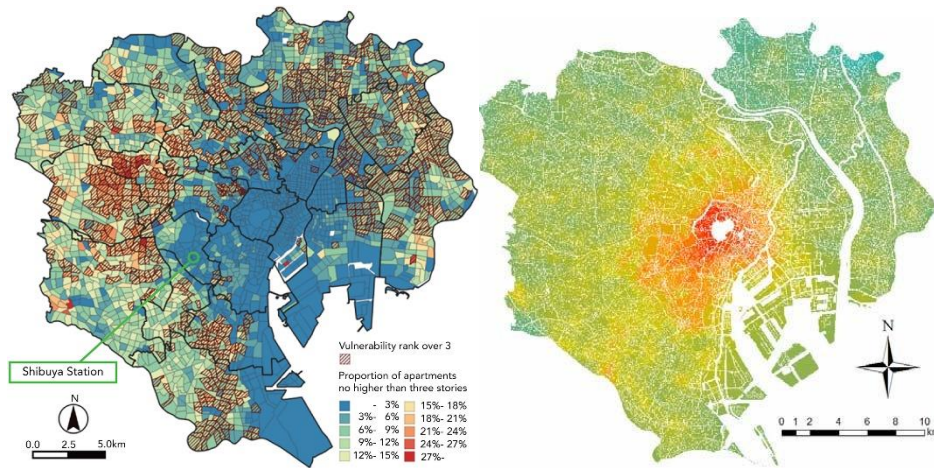

Figure 2.5: Satellite imagery for measuring income, overcrowding, and environmental deprivation (Suel et al., 2021)

2.3.3 Gentrification

The gentrification patterns in Brooklyn's Bushwick neighborhood highlight revitalization's complex impacts and displacement risks, as pioneering artists organically transformed warehouses without immediately displacing poorer residents, but subsequent luxury development waves led to rapidly rising rents that displaced many (Singhal, 2016). Similar trends manifest across Asian cities, where state-backed redevelopment initiatives actively displace marginalized informal settlement residents to enable upscale amenities catering to elites, as seen in Bangkok (Kidokoro et al., 2022). Looking closer to Tokyo we can see the number of high-rises displacing poorer residents and the land price in those areas (Figure 2.6 & 2.7)

Figures 2.6 & 2.7 Map of Tokyo

2.6 Left: Apartment Heights (Kidokoro, Fukuda, et al., 2022)

2.7 Right: Land Price Change in Tokyo (Inoue et al., 2007)

Gentrification expanded outward from Kyoto's central business district (CBD) between 2005-2009 and 2014-2018, as evidenced by major land price increases in the CBD during these periods (Figure 2.7) (Yoshida, 2022). At the same time, population data revealed growth in the 15-64 years age group in the CBD and outskirts from 2005-2015, while the elderly population declined in nearby areas such as Higashiyama (Yoshida, 2022). This demographic shift suggests young professionals were displacing older residents. In 2007, new building height restrictions under the Kyoto Landscape Ordinance limited development, especially in the CBD. This policy, known as "downzoning," drove up land values and initiated a "first wave" of gentrification.

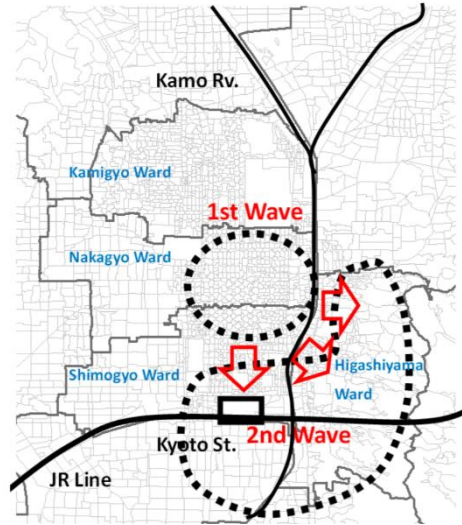

Figure 2.8: Waves of Gentrification (Yoshida, 2022)

Additionally, a 2016 revision relaxing rules on small lodging houses led to a boom in Airbnb-type vacation rentals across Kyoto (Kato, 2020). Table 2.1 reveals that guesthouse density negatively impacted household changes, yet hotel density showed no effect. Standard hotels have a secondary and less direct impact on tourist gentrification compared to short-term rentals. Hotels tend to transform the local business environment rather than the housing market. Areas with many hotels become dedicated "tourist spaces", where businesses cater more to tourists for higher profits. So, while hotels may attract more tourists, they mainly change the commercial landscape, unlike short-term rentals which directly affect residential housing. This implies the rapid guesthouse increase, rather than hotels, drove the household decline. Numerous houses vacated by the elderly were converted into tourist lodging, producing a "second wave" of gentrification.

	B	SE	p
Density of Guesthouses (N/m ²)	-3283.735	1501.592	0.029
Density of Hotels (N/m ²)			
Density of Ryokans (N/m ²)			
Density of Hotel & Ryokans (N/m ²)			
(Constant)	2.532	0.327	0

B: regression coefficient, SE: standard error, p: significance level.

Table 2.1: Effect of the number of household changes on the density of hotels (Kato, 2020)

The increase in lodging houses was particularly concentrated in districts bordering the CBD, like Higashiyama and Shimogyo, where aging populations had declined. While preserving

historic urban fabric and promoting tourism by offering public benefits, Kyoto's experience shows these policies can also accelerate gentrification and demographic turnover (Yoshida, 2022). The consequences for disadvantaged older residents' merit thoughtful consideration.

For Kikuhama, we can trace gentrification indicators like rising housing costs to assess if long-term residents are being displaced amid changes. Mapping can also identify spaces of community-centered transformation that uplift rather than uproot residents. By highlighting vulnerable groups as anchors of Kikuhama's heritage and directing development accordingly, we can illuminate inclusive growth sustaining the district's diversity.

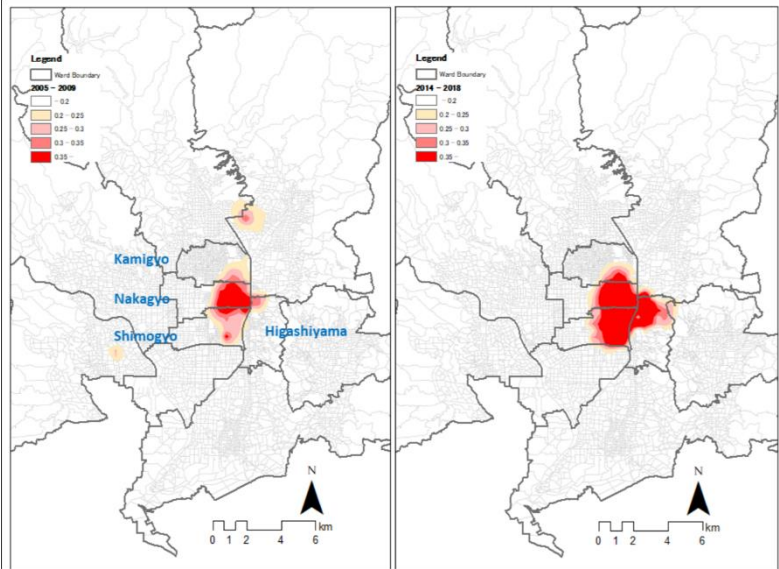

Figure 2.9: Increase Ratio of Land Price of Kyoto in Two Periods. Left: 2005–2009 Right: 2014–2018 (Yoshida, 2022)

Figure 2.10: Increase in Permitted Businesses by the “Hotel Business Act” in Kyoto City 2014–2020 (Yoshida, 2022)

2.3.4 Neoliberal Shifts

Research on Asian megacities reveals how market-driven urban policies concentrate amenities and infrastructure in affluent central districts and gated communities while critically neglecting marginalized informal settlements, exacerbating inequality (Kim & Holifield, 2022). This glaring imbalance underscores an ethical imperative: development must meet all residents' needs. Although not an Asian megacity, signs of uneven investment may emerge in Kyoto's Kikuhama district amid rapid revitalization. Comprehensive mapping and tracking of socio-spatial indicators over time can reveal potential divides, assessing if lower-income areas are disproportionately underserved. Extensive on-site investigation and conversations with residents will further illuminate where targeted interventions are needed to ensure equitable access to amenities for all. By proactively mapping inequality, this community-centered project can provide compelling spatial evidence to guide policy reforms. The goal is balanced investment uplifting the entire neighborhood toward a more just urban future in Kikuhama.

2.4 Stakeholders

2.4.1 Residents

Thoughts on Tourism: The number of households has decreased due to the rapid increase in the number of guest houses from 2015 to 2020 in the central area of Kyoto City. With the increase of guest houses, there is also an increase of disturbance in the neighborhood as tourists

are generally seen as loud and inconsiderate. (Kato, 2020). Because of this, residents of Kyoto City, and by extension residents of Kikuhama feel negatively towards tourists.

Machizukuri: The Machizukuri, or “town building” is a community participation process in which people in the community balance peaceful living with the appropriate income of business. It uses the opinion of the residents to create policies and activities with personal and public benefit (Poomchalit, 2022). In other words, The Machizukuri voices what the community would like to preserve and improve the local public spaces in a collective manner (Amkreutz, 2022). This process is important to gather information on the wants and needs of the residents of Kikuhama. It is also important that it is an established community practice as it can gather an aspect of trust, we as outsiders would not be able to.

Residents and Households: The number of residents is also important to understanding the accuracy of our research into the residents of Kikuhama. In *Figure 2.11*, Kikuhama is the second to last row of data.

国勢調査統計区別推計人口(令和3年11月1日現在)				
国勢統計区	世帯数	総数	男	女
下京区	48,237	82,344	37,865	44,479

崇仁	836	1,324	606	718

Figure 2.11: Population of Kikuhama Highlighted (# of Households, Total people, Men, Women) (City of Kyoto, 2018)

From this data, there are 1703 total people in Kyoto, 819 male, and 884 females. When conducting our research through surveys and interviews we can compare the amount of people we collect data from to the amount of people in the neighborhood. This way, we can determine how accurately our data portrays the residents of Kikuhama.

Buraku People: Historically, Shimogyo-ku has been home to a minority group known as the Tokushu Burakumin, often simply referred to as the Burakumin, meaning “special village people” (Shimahara, 1984). These communities can be found throughout Japan, with prominent groups residing in Kyoto. The Burakumin were marginalized and ostracized during the Tokugawa period (1603-1867) and continue to face discrimination through various social policies, including opposition to intermarriage with members of the other social groups, religious bias, and residential segregation.

2.4.2 Business Owners

Yamauchi Foundation: The Yamauchi Foundation is the organization in charge of the Takase River Revitalization Project. Their goal with the region is to revitalize the once beautiful Takase river which has somewhat dried up due to damage to the seawall and leakage. They are providing the funds to carry out this initiative. Their end goal is to revitalize all Kikuhama over a 30-year period, and they are just starting with this river restoration (AMP, 2022). The previous years IQP has discovered that this initiative can sometimes be at odds with the desires of residents. This is because the workers of the river restoration project are cutting down greenery that is in their way (Amkreutz, 2022).

Our project sponsor Benoit has lived in the area for over 20 years. According to him, the dominance of the Nintendo family in acquiring machiya properties, along with their controversial demolition of two houses, has stirred discussions about the neighborhood’s evolving landscape. Yamauchi Foundation’s initial foray into the neighborhood introduced a hotel, but their second project, involving shipping container structures, has faced resistance from some locals. The controversial plans to alter the Takasegawa Canal, including the planting of GMO sakura and canal waterproofing, reflect ambitious development efforts, albeit with concerns about dwindling biodiversity in the area.

2.4.3 Neighboring Districts

Movement of People Within Kikuhama: In order to get an idea of the community within Kikuhama, we must ask ourselves questions such as who is there? One part of this question is asking whether people in Kikuhama are generally there to work, or if they reside in the neighborhood. Data from the 2019 IQP would suggest that there are more commuters leaving from Kikuhama than commuters entering, as seen in *Figure 2.12* (Besch, 2019).

Figure 2.12: Movement of People in Kikuhama Per Minute (Besch, 2019)

Derived from this data is the fact that there are more people who live in Kikuhama, than there are people who go to the district to work. This data is informative; however, it only measures the commuter aspect of Kikuhama’s population. The total population of Kikuhama (seen in *Figure 2.11*) is 1,703 people (City of Kyoto, 2018). From the data approximately one third of Kikuhama’s population, meaning a significant number of people in the district are commuters.

2.4.4 Local Government

New Town Development Project: Starting in 2010, the local government in the Shimogyo Ward implemented a plan to guide the area’s urban development for the next 10 years. This was to be done in a multitude of ways, with a few end goals that the government wanted to achieve. The most overarching goal that the government had was to create a stronger community within the Shimogyo ward, making the area a safe and inviting place to live. To achieve this, the government worked with residents, beautifying neighborhoods around the ward and promoting community events. Along with the supporting of communities, the local government also helped to preserve individual neighborhoods’ histories. These programs show a general support for the

development of neighborhoods within the Shimogyo Ward and imply that the government would be invested in the revitalization of Kikuhama. However, this development isn't just for the good of the residents that live in the ward. Multiple times the idea of making the area a place where visitors don't just pass through, instead spending time there, is introduced (City of Kyoto, 2011). The government is also concerned with attracting visitors to the ward and is doing so while promoting community growth.

2.4.5 Tourists

Why Tourists?: Although it is tempting to ignore the desires of tourists and only focus on the people that actually live in the Kikuhama community, their presence cannot be passed over. Data from the 2021 IQP indicates that about 15 percent of the total lots in the district are either guesthouses or standard hotels. Now in 2023, under the Japanese Private Lodging Business Act, there are 5 properties in the Kikuhama district that are considered private lodging (Appendix F for data). Not only is the amount of tourist accommodations a significant percentage of the lots in Kikuhama, it has actually increased by 3.31 percent in the years from 2019 to 2021.

What do Tourists Want?: In Kyoto the majority of tourists are interested in the historical significance of the city (Horita, 2017). However, this isn't the only thing tourists look for when deciding where to travel. While a location's history is important, a factor of almost equal importance is its relative modernity. Tourists look for up-to-date accommodation, preferring to stay in a place of comfort while traveling to historic sites. This will most likely hold true in Kikuhama, and should influence how tourists are taken into account when considering the different stakeholder parties.

2.5 Conclusion

Blending tradition and innovation, this project focuses on the equitable revitalization of Kyoto's Kikuhama district, poised for renewal after overcoming its past stigma. Through interdisciplinary analysis, we aim to inform policies upholding Kikuhama's diverse and vibrant urban community. Our background research revealed critical context: Japan's evolution from feudalism to modernity highlights the complex dynamics between heritage and progress defining its national narrative. Kyoto stands as the spiritual heart of this narrative with its imperial legacy and tireless dedication to preserving culture amid modernization pressures. Kikuhama embodies

this timeless resilience, now ready for sustainable rebirth. Moving forward, balancing preservation and development presents challenges needing holistic solutions.

Keeping this research and our objective in mind, questions emerge needing answers. How do we manage tourism after urban revitalization of Kyoto? How do we integrate Japanese architectural elements into our proposals, ensuring inclusive growth and enhancing sustainability? How has the district changed since the last IQP group visited Kikuhama? We explore these questions in detail and create proposals to solve them in our next chapter.

Seeking answers through updated data collection, spatial analysis, and community perspectives can provide insights to guide decision-making. Ultimately, by learning from the past while innovating for the future, we hope to help Kikuhama write a new chapter as a thriving, equitable and resilient urban district.

Chapter 3: Methodology

Our overall goal for our project was to map the Kikuhama district of Kyoto, and develop proposals for revitalization while considering sustainability, preservation of cultural heritage, and community. In terms of methodology, our project utilized the interpretation of social factors like culture, income, discrimination, etc., and advanced mapping technologies to gain insights into the Kikuhama area. Our aim was to offer a novel perspective that will inform recommendations tailored to this particular locale. The specific goals of our project included:

3.1 Objective 1

To conduct an assessment of the Kikuhama district to gain an in-depth understanding of its current demographic composition and dynamics.

In recent years, the district of Kikuhama has undergone rapid changes driven by tourism development and investment. To gain a deeper understanding of the shifting demographic landscape and better inform policy decisions, a resident assessment study was undertaken. The study delved into the profiles and motivations and origins of current residents, investigated the reasons behind residents who have left, analyzed the motivations and origins of individuals purchasing land in Kikuhama, and examined the demographics and origins of individuals purchasing land in Kikuhama. By shedding light on the complex population dynamics at play, this assessment provided invaluable insights on how best to strike a balance between development and community stability in the evolving landscape of Kikuhama.

3.1.1 Analyze census data to understand demographic trends and shifts in Kikuhama's population.

In order to analyze the population trends in Kikuhama, we executed a methodological approach leveraging the Kyoto Open Data website. This online platform served as our primary source for accessing pertinent census data. The data, originally in Excel files and pdfs, posed a linguistic challenge due to its Japanese context. To overcome this obstacle and enhance our understanding of the data within these files, we undertook the translation of the data files into English.

Our analytical scope extended over several decades, spanning back to 1960, to capture a comprehensive historical perspective. The data included population figures, age distributions, number of households, birth rates, death rates, and people moving in and out of Kikuhama. This extensive timeframe facilitated a thorough examination of the population dynamics in Kikuhama. Subsequently, to gain further insights and anticipate further trends, we implemented a population prediction model. This model was designed to extrapolate and project potential shifts in the population based on the historical data. By employing this approach, we aimed to provide a nuanced analysis of the demographic evolution in Kikuhama over the years.

3.1.2 Identify and document current residents, including those facing changing circumstances.

To gain an in-depth understanding of the demographic landscape within Kikuhama, we conducted an assessment of Kikuhama's residents. This endeavor aimed to provide a profound understanding of the district's historical demographic composition and dynamics. Central to this effort was the meticulous identification and characterization of its diverse array of residents, each with a unique set of circumstances that contributed to the rich tapestry of Kikuhama's community.

This demographic characterization endeavor encompassed individuals from a broad spectrum of backgrounds and life stages. From the long-standing elderly residents who had witnessed the district's evolution over the years to the newer, younger renters who brought fresh perspectives and energy, every facet of Kikuhama's population was examined. The process delved into the intricacies of household size, shedding light on the dynamics of families and shared living arrangements. Furthermore, the assessment analyzed income levels, a crucial aspect that shaped the socio-economic diversity within the district. Additionally, a keen focus was directed toward dissecting various housing arrangements, from traditional family homes to apartments and rental properties, capturing the essence of how residents interacted with their living spaces. By gathering these data points and attributes, we aspired to create a profile that encapsulated the essence of those who called Kikuhama home.

In essence, this characterization method sought to create a vivid portrait of the residents who were a part of the lifeblood of Kikuhama. Their diversity and unique circumstances were the pillars upon which the district's community thrived. Through this in-depth analysis, we aspired

to not only gain a comprehensive understanding of the district's historical demographic composition but also to lay the groundwork for informed decision-making that ensured Kikuhama's continued prosperity while preserving its rich cultural heritage.

3.1.3 Investigate the reasons behind residents who have left, their destination, and motivations for leaving.

To gain an understanding of Kikuhama's evolving demographic landscape, we recognized the significance of understanding former residents who have chosen to leave the district. Through a structured approach, we conducted exit interviews and surveys targeting individuals who have bid farewell to Kikuhama. Our primary objective was not only to ascertain their destinations but to delve into the intricacies of their motivations, which ultimately drove them to leave this once-familiar neighborhood.

These interviews offered a unique window into the decision-making process of former Kikuhama residents. We discovered whether they remained within the district, relocated within the city of Kyoto, or ventured outside the area entirely. Understanding the spatial dynamics of their departures provided valuable insights into the urban fabric and how Kikuhama's attractiveness compares to other localities within Kyoto. This knowledge was instrumental in mapping the flows of people and the areas that draw them away from Kikuhama, ultimately contributing to a more comprehensive understanding of the district's evolving social dynamics.

Moreover, the analysis of the collected data was extended beyond the surface, delving into the multitude of reasons behind these departures. By conducting surveys and exit interviews, we uncovered the underlying motivations - be they economic, social, cultural, or a combination thereof - that led former residents to relocate. This deeper insight into individual decision-making not only provided context but also served as a foundation for policymakers and urban planners seeking to shape the future of Kikuhama in a way that addresses the concerns and desires of its community members.

3.1.4 Analyze the individuals that own land, and Airbnb hosts within the district.

Property transactions in Kikuhama serve as a rich source of information, offering a comprehensive insight into the motivations and backgrounds of individuals investing in this district. Our research places a crucial emphasis on analyzing real estate transaction data,

providing nuanced insights into the diverse demographics, historical residences, and defining characteristics of those contributing to Kikuhama's evolving community.

A notable transformation is underway as property owners repurpose their homes into Airbnb rentals. This shift in land usage not only alters the physical landscape but also carries profound implications for the district's socio-economic fabric. Our research delved deeply into this phenomenon, gaining a comprehensive understanding of the demographics and origins of these property owners who play a pivotal role in reshaping Kikuhama.

To gather this information, we conducted on-site investigations, inspecting nameplates on buildings throughout the neighborhood to identify property owners. Additionally, we identified Airbnb listings in the area and explored any associated owners or stakeholders connected to these properties.

3.1.5 Conduct interviews with members of the neighborhood.

To gather insights, we used interviews as integral components of our research methodology. Our interview questionnaires are tailored to four key demographics: local business owners, students, and older members of the community. We chose these particular groups to cover the demographic of the district. Local business owners can shed light on the impact of urban revitalization efforts on local commerce, challenges faced by businesses, and opportunities for growth. Students represent the younger generation and future residents of Kikuhama. Older members of the community see the area in different ways than the younger population and have seen the area grow and change. Their perspectives can provide insights into the aspirations, preferences, and expectations of the community's future, helping shape urban development strategies that align with the evolving needs of younger demographics. Older community members likely possess historical knowledge and have witnessed the evolution of Kikuhama. Their perspectives can provide valuable insights into the cultural heritage, community traditions, and the potential impact of revitalization efforts on the existing social fabric.

These interviews focused on changes observed over the past four years, feelings regarding these changes, areas of cultural significance with preserving, distinctions between traditional and modern buildings, structures that stand out, and visions for future development and improvement. Our approach to selecting interviewees involved reaching out through email, and during our on-site presence in Japan, we actively engaged with shopkeepers, business

owners, and residents to conduct the interviews. Our interview questions are located in Appendix A and B for reference. This structured approach ensures that our research efforts are focused, meaningful, and aligned with the nature of Kikuhama’s evolution.

3.2 Objective 2

To take a visual inventory of the Kikuhama district and document any findings.

After establishing an overview of the community in Kikuhama we took a visual inventory of the buildings. We did so by finding differences, or consistencies from the data of previous IQPs.

The first task to face within this objective was splitting the neighborhood into six main groups, and multiple subgroups based on street blocks (seen in *Figure 3.1*).

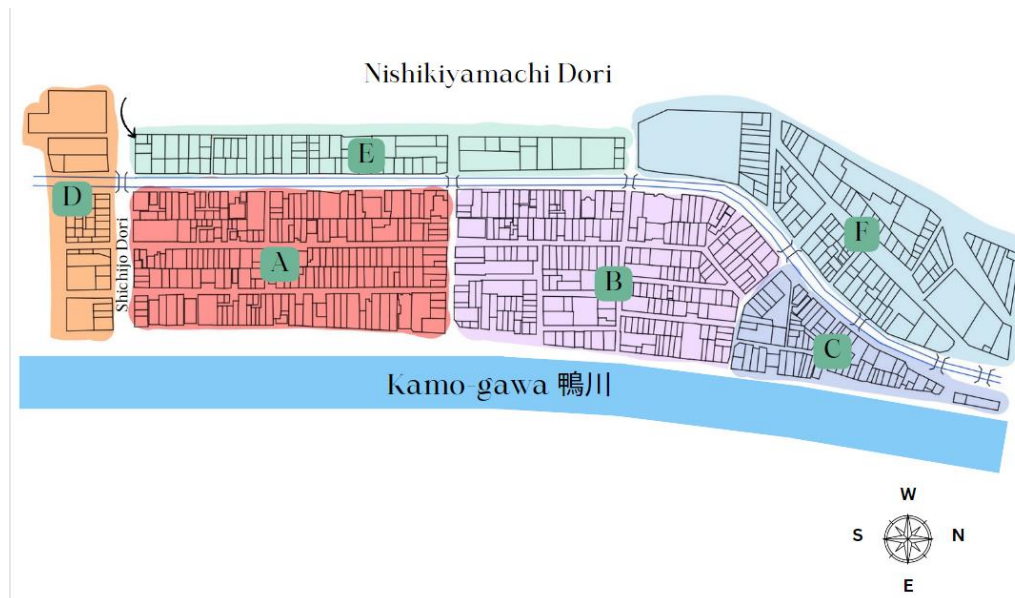

Figure 3.1: Map Sections in Kikuhama (2023)

After the categories were created, we gave each building a tag using the formula section-subsection-building number (ex. B-1-4). We kept the same order of buildings by starting in the top left corner of a subsection, as seen in the arrow next to E, and moving clockwise around the whole subsection. Section A-3 was the only exception, instead starting in the bottom left corner. We then created a spreadsheet with data in this format and input the data into a map on QGIS.

While we numbered all the buildings, we also categorized each building based on its use. These categories mainly revolved around the ones outlined in the 2021 IQP project and included

hotels, guest houses, residential homes, local businesses, places of worship, parking lots and empty lots. In addition to these we also looked for schools, parks, public buildings, museums, and properties that doubled as a business and a residence. If a building was abandoned, regardless of its previous use, it was labeled as such.

3.3 Objective 3

To create a digital visual overview of Kikuhama and share it through a website

Throughout the course of this project multiple different types of data were collected through various methods. Because of this data storage played an important role in ensuring that everything ran smoothly. There were two main data sets collected during the project, observational data taken from surveying the Kikuhama district on foot, and interviews performed with members of different sectors of Kikuhama.

Observational Data: The observational data was stored within multiple spreadsheets. For each building, its data was first stored within a sheet containing the buildings in its sub-section. This data included its label, observed building type, the property owner's name if available, and a current picture of the location. Once every building in the district had been recorded, all of the data was collected into a single spreadsheet. All of the earlier points of data were included for every building.

Interviews: Interviews, because of their more qualitative nature, had to be stored differently from the other data sets. In most cases the interview transcript was stored in an individual folder, along with a recording if possible. Along with this, the interviewer provided any notes that they took during the interview, or wrote down after it concluded, putting them into the same interview folder.

Mapping the Data: Collected data was used to create a map of the Kikuhama district. For this map the main dataset used was the observational data, as the interview data was not applicable. The software that was used to perform the mapping was QGIS, a free program that allows for the creation of 2D maps. To start, a baseline map was made that outlined all of the buildings included within the district. Next, data points were placed to indicate each of the buildings, containing an auto generated unique id, the building label we gave based on our naming convention, the type of building, whether the building was under construction, and the

property owner's name if possible. To finish the map off, each building was color coded based upon its type.

Website: A website was created using HTML, JavaScript, and CSS programming languages, hosted locally, to facilitate seamless access to the collected data for subsequent project groups. The incorporation of React.js, an open-source library for user interface creation, enhanced the site's interactive capabilities. The website's code was open sourced on GitHub, ensuring the post-project ownership transition to the school, thereby granting future groups the flexibility to modify it.

The website provided an accessible repository for the datasets amassed during the project, featuring an interactive map and presenting the group's conclusions. The site featured an informative page offering detailed insights into the project center, catering to the curiosity of students intrigued by the Kyoto location. This comprehensive approach to website development served not only to disseminate research outcomes effectively but also to foster a collaborative and secure platform for ongoing academic endeavors.

3.4 Limitations

The methodology outlined in this chapter presents several potential limitations that were addressed to ensure the reliability and validity of the research findings. One significant concern lay in the sampling strategy for interviews, which may not have fully represented the diversity of the Kikuhama population if certain demographics are inadvertently excluded or hard to reach. To address this, we expanded outreach efforts by utilizing local connections to help increase the diversity of participants, ensuring a more representative sample.

Another limitation we faced was that residents of the neighborhood warned us against taking photos of residences. To address this, we had to “be like shadows, like detectives” (Jaquet, 2023). Another way we addressed this issue was by explaining our “project in a very clear and simple way” to “generate some goodwill” (Sphar, 2023). Because of this, we were not able to take panoramic photos as we had previously hoped. That being said, we were still able to get individual photos, so changes to the buildings will still be visible.

When collecting data from the official census, we noticed that the map provided by the government had borders much larger than the one given to us by previous IQP groups. For any data pulled from the census, it wouldn't accurately represent the district unless the borders of our

own map expanded as well. Faced with the decision of spending extra time expanding the borders or not including census data at all, we choose to invest the time and grow our effective map to match that of the government's. Although this ended up taking more time than we initially planned for, it allowed our group, and any following groups, the ability to reference census data with confidence.

3.5 Project Timeline

<i>Week 1</i>	<i>Week 2</i>	<i>Week 3</i>	<i>Week 4</i>	<i>Week 5</i>	<i>Week 6</i>	<i>Week 7</i>	<i>Week 8</i>
Meet with sponsor	Start interviewing residents				Finish up documentation of Kikuhama	Draft and finalize final IQP report	
Walk around neighborhood to get feel	Collect survey data				Finish up interviews	Create and practice final presentation	
Meet with local authorities, introduction	Document people's movements in and out of Kikuhama				Analyze survey data		
Meet with university students, translators	Document changes in the neighborhood						

Chapter 4: Introduction to Findings & Analysis

This section presents the key findings and analysis from the research study on the Kikuhama area in Kyoto. The findings and analysis aim to address the research questions and objectives outlined earlier in Section 3. By bringing together the key components of data, analysis, and discussion to shed light on the Kikuhama research context and research problem established at the beginning of the study.

4.1 Census

During the course of the research endeavor, we undertook an examination of available Kyoto regional census data. Our primary objectives centered around discerning nuanced insights into demographic shifts, population shifts, population dynamics, and geographical delineations, with a specific focus on the Kikuhama area throughout recent historical periods.

Notwithstanding our commitments to rigorous analysis, we encountered certain limitations during the scrutiny of Kyoto's census records. Predominantly, language barriers impeded a comprehensive interpretation of certain materials, as the intricacies of Japanese content were challenging to fully capture through translation, resulting in the selective extraction of pertinent excerpts. Furthermore, the inherent challenges posed by the eligibility and unusability of earlier historical records constrained our scope, compelling us to concentrate primarily on comparative analyses between the latest available reports from 2015 and 2020.

Nevertheless, the recent census data brought forth compelling revelations regarding notable trends within Kikuhama's evolving socio-demographic landscape. The juxtaposition of these findings against broader Kyoto city ward trends over the corresponding five-year interval yielded substantive insights. The intricate population metrics, maps, and neighborhood specific details provided an illuminating localized snapshot into Kikuhama's transformation amidst the rest of Kyoto's ongoing development.

4.1.1 Census Data (Overall)

The 2020 Kyoto census indicates the population of Kikuhama to be approximately 1701 current residents, representing a small 10.7% decline from the 1905 people recorded in 2015.

Total households numbered 1,174 in the latest 2020 count, down 9.41% from 1,296 five years prior.

In stark contrast, the broader Kyoto prefecture experienced a 0.8% population decrease between 2015 and 2020. According to the regional census data, the number of residents in Kyoto city decreased from 1.475 million to 1.463 million during the same period (Appendix G-N). This decrease in population, however, is accompanied by a 3.4% rise in total households citywide, indicative not only of a small population decline but also heightened demands for housing density.

This contrasting narrative suggests that while the larger Kyoto urban area continues to attract and lose residents and witness increased residential construction, Kikuhama faces a diminishing allure among the younger, professional demographic, resulting in a decline in both population and household numbers. The implications of this trend, particularly in the context of the burgeoning growth in surrounding high-rise wards, merit a deeper exploration into the driving forces behind these divergent trajectories.

Further analysis of the census data unveils that over 23% of Kikuhama residents in 2020 were aged 65 or over, a figure surprisingly lower than the citywide average of 28.2% for the elderly population. Additionally, the average household size in Kikuhama has exhibited a gradual reduction over the past few decades, decreasing from 1.54 persons per household in 2015 to 1.445 in the latest census. While this aligns with broader Japanese trends favoring smaller nuclear families, the discernibly swifter pace of reduction in Kikuhama stands in contrast to the relative stability observed in household sizes across the wider metropolitan area. These demographic nuances underscore the unique socio-cultural dynamics at play within the Kikuhama locality and warrant a nuanced investigation into the factors shaping its distinctive population trends.

4.1.2 Census Map

During our research on the census, it came to our attention that the number of households in the census data was far greater than the previously used Kikuhama map. For the past 80 years, the Kyoto Census map has stayed the same, especially the Kikuhama area. This area spans from the Kamogawa river on the east, the western buildings on the Nishi-Kiyamachi-dori, Gojo-dori on the north, and the southern buildings on Shichijo-dori (*Figure 4.1*). The map previously used

by other WPI projects spanned Kamogawa river on the east, the buildings east of the Kamogawa, Gojo-dori on the north, and Shichijo-dori (Figure 4.2).

Figure 4.1: Kikuhama Census Map (2023)

Figure 4.2: Previous Kikuhama IQP Map (Kachadoorian et al., 2021)

This census map had approximately 25-35% more households than the map previously used by previous IQP's rendering any census data used obsolete. For 5 years, projects done by previous WPI students did not properly portray Kikuhama. While the previous incorrect map mainly includes buildings like residences, parking lots, abandoned lots, and small businesses, this census map includes different buildings like schools and parks.

By identifying and correcting the map that will be used for our research, visualizing how Kikuhama transforms over the years will become easier and more streamlined as we are now able to utilize census data and any changes that follow.

4.1.3 Kyoto City Statistical Monthly Report (Population)

Utilizing the vast Kyoto Open Data website to identify data that is catered about Kikuhama, we were able to find population data from the 1960 census and the Kyoto City Statistical Monthly Report. This report is “a [monthly] compilation of the latest information in all fields, including population, number of households, industrial economy, urban facilities, culture, and tourism, both city-wide and by administration (Kyoto City General Planning Bureau,

n.d.).” Year, month, number of households, number of populations, number of male, number of female, births, deaths, number of people who entered, and data on number of people who exit were collected.

Year	Date	Month	Household	Population	Man	Female	Birth	Death	Num People Entry	Num People Exit	Other
2015	15-Nov	November	1296	1905	934	971	0	1	24	25	2
2016	Nov-16	November	1268	1870	916	954	0	1	14	21	1
2017	Nov-17	November	1234	1807	868	939	1	4	11	22	0
2018	Nov-18	November	1198	1733	841	892	0	1	25	26	2
2019	Nov-19	November	1183	1715	850	865	0	0	13	14	0
2020	Nov-20	November	1172	1697	828	869	0	1	11	14	0
2021	Nov-21	November	1168	1703	819	884	0	1	12	12	3
2022	Nov-22	November	1210	1716	841	875	0	1	19	15	3
2023	23-Nov	November	1238	1764	853	911	0	1	28	13	0

Table 4.1: Kikuhama Population Data (2023)

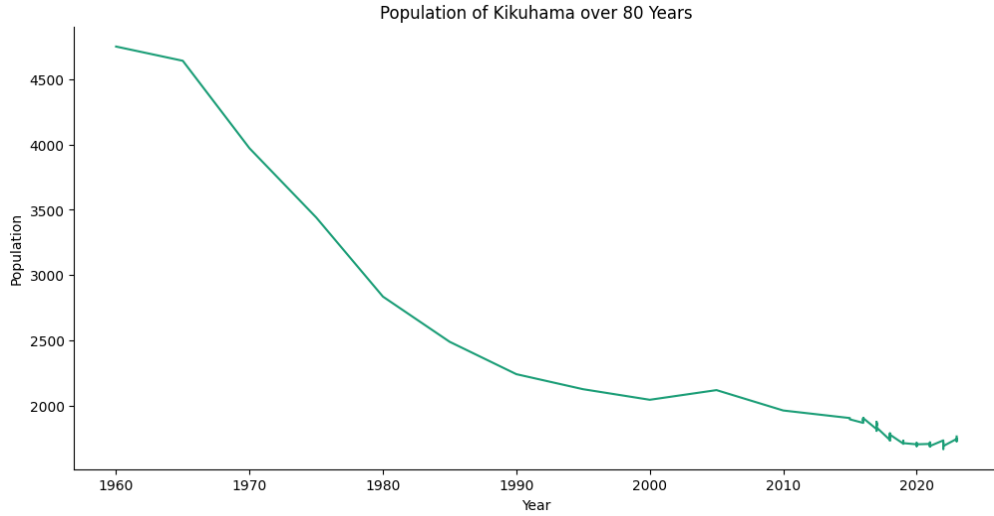

Figure 4.3: Population of Kikuhama over 80 Years (2023)

Using this data, to visualize how the Kikuhama area will grow, we fit a linear regression model to predict the future population of Kikuhama. This model only considers population and year as of right now and can accurately predict the future population with 91% accuracy. Using this prediction, we can see that with the current trends, the population of Kikuhama will continue to decrease at a slow rate.

Figure 4.4: Linear Regression Population of Kikuhama Prediction (2023)

However, we utilized the Facebook Prophet model, a time series forecasting model that was open sourced by Facebook's data science team, which is optimized for business forecasting and operational time series data as it can fit non-linear trends better. This model results with 50 years in the future resulting in a predictable continuous decrease in population and after 2033, there is a possibility of the population increasing. All the code for these models and graphs can be seen in Appendix P. Hopefully as time continues, more people move into the area and bolster the already shrinking community.

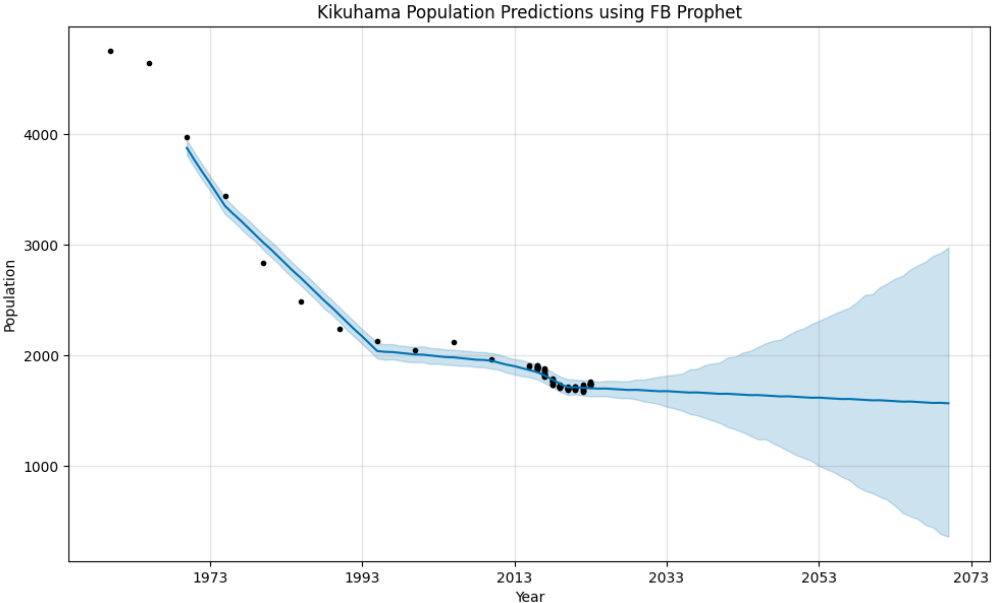

Figure 4.5: FB Prophet Population of Kikuhama Prediction (2023)

4.1.4 Census Conclusion

Overall, delving into the available Kyoto regional census data unveiled several telling trends about Kikuhama’s shifting population and demographics in recent years. When positioned against wider city growth patterns, the population declines and transformations surface a potential need for greater support, resources, and appeal among the Kikuhama community specifically amidst Kyoto’s overall expansion. The census analysis provides a fact-based foundation for evaluating residential, development, business, and tourism impacts on Kikuhama. As modern Kyoto continues rapidly evolving, ensuring equitable revitalization of its constituent local areas will require ongoing understanding of these data.

4.2 Mapping Data

The neighborhood map created with QGIS for our 2023 analysis expands significantly upon efforts from previous years to fully align with the Kyoto Census map boundaries. Due to the widened scope of our mapped area, we can utilize updated building data in conjunction with newer census data to conduct a more accurate examination of the neighborhood.

Integrating the expanded datasets required adding each missing building to census blocks, but it provides an incredibly detailed view of the neighborhood makeup. As seen below in Table 4.2, we categorized each identified structure by type, then further sorted by percentage prevalence within Kikuhama.

Color Legend	Building Category	# of Building	% of Building
	Residential	397	53.87
	Guesthouse	74	10.04
	Business	72	9.77
	Abandoned	68	9.23
	Parking Lot	50	6.78
	Business/Residential	31	4.21
	Empty Lot	18	2.44
	Hotel	16	2.17
	Temple	4	0.54
	Government Buildings	3	0.41
	Museums	2	0.27
	Schools	1	0.14
	Parks	1	0.14

Table 4.2: Building Categories (2023)

With 397 identified residential buildings, we can estimate the average number of occupants per residence by dividing the total neighborhood population of 1764 people by the number of homes. This results in approximately 4.44 people per residential building. However,

this estimation should be considered cautiously, as both single family homes and large multi-unit apartment high rises are grouped under the residential category despite their vastly different occupancy levels.

The expansion of our map to align with the census boundaries opened up beneficial new dimensions of data collection, such as the ability to distinctly identify less common building types like museums and parks. Moving forward, having these additional categories available in our building data will enable more targeted analyses that were not previously possible. For example, cross-referencing the number of museums or entertainment venues against demographic data may uncover interesting usage patterns among different age groups or ethnicities in our community.

4.3 Changes from Past Years

To understand how the neighborhood is changing, we compared our gathered data on building categories to the 2 previous IQPs. As the map area has expanded, comparing the data directly would be inaccurate. Therefore, only data of sections A, B and C are compared.

Figure 4.6: Smaller Map of Sections A, B, and C (2023)

We have compiled the data from this and previous years into a side-by-side comparison to get a better idea of what is changing.

Color Legend	Building Category	2019 # of Building	2019 % of Building	2021 # of Building	2021 % of Building	2023 # of Building	2023 % of Building
	Residential	313	61.49	220	41.50	282	53.82
	Business	46	9.04	86	16.20	53	10.11
	Business/Residential	N/A	N/A	N/A	N/A	19	3.63
	Guesthouse	51	10.02	59	11.13	56	10.69
	Hotel	8	1.57	20	3.77	13	2.48
	Empty Lot	23	4.52	14	2.60	12	2.29
	Parking Lot	20	3.93	38	7.20	32	6.11
	Government Building	N/A	N/A	N/A	N/A	1	0.19
	Temple	6	1.18	11	2.00	1	0.19
	School	N/A	N/A	1	0.18	0	0.00
	Museum	N/A	N/A	N/A	N/A	2	0.38
	Abandoned	17	3.34	22	4.20	53	10.11
	Unknown	N/A	N/A	41	7.70	N/A	N/A
	Storage/Warehouses	25	4.52	18	3.40	N/A	N/A

Table 4.3: Comparison of Building Categories Between 2019, 2021, and 2023 (2023)

In this table, the most notable trend is the dramatic rise of abandoned buildings. This notable surge may be attributed to the inclusion of buildings currently undergoing construction but erroneously categorized as abandoned in our analysis. It is pertinent to note that the Yamauchi Foundation is actively engaged in the construction of numerous guest houses in the area. Consequently, it is reasonable to anticipate a future increase in the number of guest houses, thereby contributing to the observed rise in abandoned building numbers.

However, a discrepancy is observed in the 2021 data, which can be attributed, in part, to the remote mapping undertaken by the previous IQP group. Their inability to physically navigate the neighborhood led to a significant number of unidentified buildings, categorized as unknown. Despite their classification as unknown, it is assumed that these structures likely comprise residences, indicating a potential underrepresentation of residential buildings in the 2021 dataset (Kachadoorian et al., 2021). While these disparities are substantial, minor inconsistencies may also be attributed to variances in category assignments. Though the current map may not be employed for precise census data analysis, it substantiates the prevailing trend of a diminishing

population. This demographic decline is corroborated by the building data, underscoring a reduction in the number of residences alongside an increase in abandoned structures.

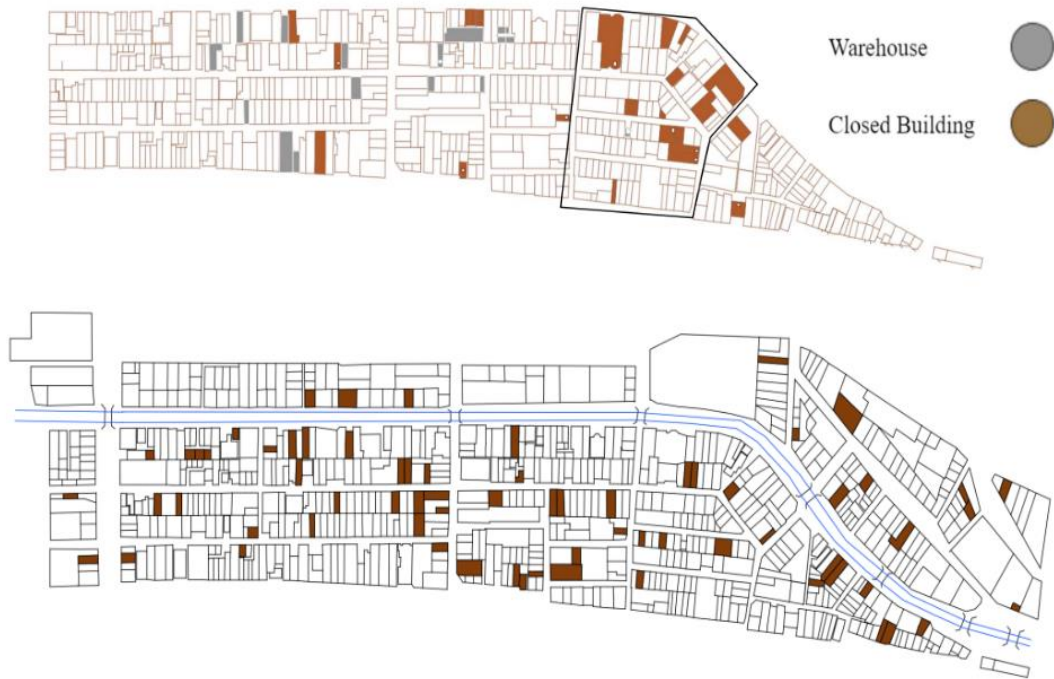

Figure 4.7: Comparison of Abandoned Buildings 2021, and 2023 (Kachadoorian et al., 2021) (2023)

The distribution of abandoned buildings has changed between 2021 and 2023. In 2021, abandoned buildings were concentrated in the northern end of section B. However, by 2023 they have become more dispersed. In addition, there are now more abandoned buildings in section A compared to 2021. This is concerning given that section A contains the highest density of residential buildings, as evidenced by Figure 4.8.

Figure 4.8: Residential Buildings (2023)

With the increase of abandoned buildings in residential areas it is evident that the population is declining, even in the smaller areas consisting of only sections A, B, and C. This demographic shift is indicative of challenges faced by the community, posing significant implications for its socio-economic fabric and vitality. Furthermore, a noteworthy development in the neighborhood is the adaptive repurposing of abandoned buildings into guest houses by the Yamauchi Foundation. While our classification currently includes their structures under the abandoned category, it is crucial to anticipate their completion in future projects, leading to a shift from an increase in abandoned buildings to a rise in guesthouses.

As these repurposed buildings become operational, it introduces a new dimension to the neighborhood, potentially attracting more tourists. The Yamauchi Foundation's commendable efforts to enhance the aesthetic appeal of Kikuhama may inadvertently contribute to the area transforming into a tourist hub. This shift, while making the neighborhood visually appealing, raises concerns about the potential impact on the existing negative stigma associated with Kikuhama.

Examining the commercial aspect of Kikuhama over time reveals a consistent composition of dedicated businesses, guesthouses, and hotels. However, a noteworthy addition to the commercial categories is the emergence of a business/residential group. This category unveils a previously overlooked cluster of commercial activities nestled within residential areas, highlighting a deeper integration of commerce within the neighborhood. The identification of this business/residential category brings attention to the evolving nature of Kikuhama's economic dynamics, suggesting a more intricate interplay between residential and commercial functions. This trend invites further exploration into how these integrated spaces contribute to the overall character and sustainability of Kikuhama as it undergoes transformations over time.

Figure 4.9: Businesses, Hotels and Guesthouses compared between 2019, 2021 and 2023 (Kachadoorian et al., 2021) (2023)

Sections A, B, and C, except for the northernmost part of section F, contain most of the commercial buildings. These insights, derived from comparison of previous maps, ensure a more accurate assessment of trends, rectifying anomalies observed in the 2021 map that exhibited an over-tagging of businesses. The alignment with the standard set in 2019 establishes a reliable foundation for understanding the distribution and evolution of commercial spaces within Kikuhama.

Amidst the fluctuating building types, parking lots emerge as the most stable building, as they are easily identifiable structures from a bird’s eye view. Notably, parking lots increased by approximately 3% over 4 years, signaling shifts in transportation habits and infrastructure

demands to accommodate a growing number of cars. Monitoring this trend becomes crucial for shedding light on the development pressures exerted on the Kikuhama area.

2019 Parking Map

2021 Parking Mapping

Figure 4.10: Comparison of Parking Lots Between 2019, 2021 and 2023 (Kachadoorian et al., 2021)

While the overall appearance of the parking lot map remained relatively consistent between 2021 and 2023, a discernible increase became evident when comparing data from 2019. The challenge of effectively differentiating parking lots from vacant lots without on-site observation became apparent, contributing to the misclassifications by the 2021 group. Despite this, the overarching trend points decisively towards a surge in parking development, showcasing the evolving landscape of Kikuhama.

In addition to noteworthy growth in parking lots, our research indicated a lower percentage of empty lots compared to the findings of the 2019 group. This insight suggests

potential shifts in land use patterns and development strategies within Kikuhama. The expanding scope of our mapping efforts, encompassing updated building data and census boundaries, enhances the accuracy and depth of our observations, providing a valuable resource for future research initiatives in the area.

4.4 Interviews

In Kikuhama, a complete comprehension of the intricate historical fabric and social dynamics proves paramount. Our engagement with the local community through interviews served as an invaluable means to gain insights and perspectives unattainable through online sources. During our meticulous mapping endeavors, we encountered and interviewed two distinct individuals: Interviewee 1, Jiro-san, a male resident, and Interviewee 2, a female resident who preferred to remain anonymous (Interview notes in Appendix D.). While both individuals reside within the Kikuhama locale, their divergent viewpoints on the future trajectory of the area were particularly noteworthy.

In our conversation with Interviewee 1, Jiro-san, 56 years old, started off with a brief overview of his life and a few interesting aspects of the Kikuhama area. He has lived in Kikuhama for his entire life with his mom and sister and his recent girlfriend who comes from outside Kikuhama over the weekends. He works a relaxing job outside of the area, driving people in need and helping them clean. We asked him what building his favorite is and the most crucial. “My favorite building is Ume-yu (Bathhouse). It is so relaxing you should visit it.” This can be seen as one of the more important buildings in the Kikuhama area. As Ume-yu is always full of locals and tourists during the nights according to Jiro-san. He also mentioned his favorite restaurant in the area is the Oden restaurant in Section B. “If I could go anywhere in the world to live, I would stay in Kyoto more specifically in Kikuhama as it is close to train stations, quiet, and enjoyable”. “The only thing that is missing from Kikuhama is a Kyoto souvenirs and boutiques shop.” Overall expressing his happiness and feelings of content with the Kikuhama area. He believes that Kikuhama has been improving and will continue to improve in the next coming years.

Interviewee 2 on the other hand was negative about the area and what the future could bring for the area. She spoke about how her family has lived in the area for generations and that the area is not as nice as it seems. “Kikuhama is a nice place, but you need to be weary there are

some bad people around here.” In addition to expressing concern about the increase in hotels and short-term lodging. The increase of guesthouses in future years will most likely have a negative impact on her and other members of the community that share her views. However, similarly to Interviewee 1, Jiro-san, the bathhouse is the most important building and that Kikuhama should be safer and have more shops in the future. Overall expressing a more negative view of the Kikuhama area and that one still needs to be wary and unhappy with some of the changes.

Chapter 5: Conclusion and Future Recommendations

Our research on Kikuhama, Kyoto, has unveiled multifaceted insights into the evolving dynamics of this locality. By delving into census data, mapping analyses, and community interviews, we sought to address critical questions about demographic shifts, socio-cultural changes, and the overall trajectory of the area. Our findings provide a nuanced understanding of Kikuhama's current state, positioning it within the broader context of Kyoto's urban development.

The census analysis revealed intriguing trends, indicating a decline in population and household numbers within Kikuhama, in stark contrast to the overall growth observed in Kyoto city. The area's demographic landscape, characterized by an aging population and shrinking household sizes, underscored the need for a nuanced exploration of the factors influencing these distinct trends. The interviews with residents, particularly Jiro-san and Interviewee 2, added a qualitative dimension to our research, highlighting diverse perspectives on Kikuhama's past, present, and future.

The discrepancy in the census data and mapping records from previous years brought to light the importance of accurate mapping for reliable analyses. The corrected census map, aligning with Kyoto Census boundaries, rectifies past inaccuracies and lays the groundwork for more precise future research. The comparison of building categories over the years, especially the rise in abandoned buildings and changes in commercial dynamics, further emphasizes the dynamic nature of Kikuhama's built environment.

Looking forward, our study suggests that Kikuhama faces a pivotal juncture, marked by demographic shifts, changing building landscapes, and divergent community sentiments. It is imperative for future research endeavors to consider the cultural richness, engage with community stakeholders, and leverage diverse data sources to capture the essence of Kikuhama.

In the context of the global trend towards urbanization, Kikuhama's unique challenges and opportunities demand thoughtful consideration. As the community navigates these changes, ongoing research, community engagement, and adaptive strategies will be crucial for ensuring the sustainable development and preservation of Kikuhama's cultural heritage.

Our study contributes not only to the academic understanding of urban dynamics but also serves as a practical guide for future researchers, policymakers, and community leaders, invested

in the holistic development of Kikuhama. By embracing these insights and recommendations, stakeholders can work collaboratively to shape a future for Kikuhama that respects its past, responds to present challenges, and embraces the opportunities for continued growth and vibrancy.

5.1 Future Recommendations

As our exploration of Kikuhama comes to a close, it is imperative to cast a future focused gaze and delineate actionable recommendations for future research endeavors. Grounded in the lessons learned and insights gained from our study, these future recommendations serve as a compass for researchers, community leaders, and policymakers navigating the path ahead. From cultural understanding to community engagement, data diversification, and technological integration, the recommendations outlined herein aim to fortify the foundation for future projects in Kikuhama, fostering a holistic and sustainable approach to the area's development. Through these proposed strategies, we aspire to provide a roadmap that not only addresses current challenges but also charts a course for the preservation of Kikuhama's cultural heritage and the cultivation of a thriving, resilient community.

5.1.1 Understanding cultural nuances

To grasp the cultural nuances of Kikuhama, it is imperative to delve into the local customs and etiquette prevalent in the community. This exploration should extend beyond surface-level observations to understand deeply ingrained traditions, such as the emphasis on maintaining a quiet atmosphere, the adherence to Japanese cultural norms, and the importance of respecting privacy. Acknowledging and respecting these customs will lay the foundation for positive and meaningful interactions between researchers and the local community.

In tandem with exploring local customs, researchers should embark on an in-depth exploration of the historical significance of Kikuhama. A pivotal aspect of this historical inquiry is the transition of Kikuhama from a red-light district in 1966. By examining societal shifts, cultural transformations, and community adaptations during this period, researchers can uncover the layers that contribute to the area's identity. Collaboration with historians and community members becomes essential in understanding this transformative phase in Kikuhama's history.

A demographic analysis focusing on the gender and age composition in Kikuhama will provide crucial insights into the community's fabric. The historical context, marked by a higher number of women than men and a prevalence of older residents, requires a thorough examination. Researchers should explore how these demographic dynamics influence the social landscape, contributing to the area's unique cultural evolution. It is worth noting that during our fieldwork, we encountered challenges in approaching some older residents. Older ladies in particular (around 65+ in age), expressed their hesitation or declined interviews when approached. This reluctance may stem from historical factors, including the area's past association with the Yakuza, as alluded to by a concerned elderly resident who cautioned us about the presence of individuals not receptive to strangers. This aspect adds an additional layer of complexity to our cultural exploration, necessitating nuanced and respectful engagement to bridge any existing gaps and foster a more inclusive understanding of Kikuhama's rich cultural tapestry.

By amplifying community voices and navigating sensitivities, researchers can ensure that the research process aligns with the diverse perspectives and unique experiences of Kikuhama's residents, contributing meaningfully to its preservation.

5.1.2 Utilizing Past IQP Projects and Japanese Sources

Building upon the accumulated knowledge gained from prior IQP projects serves as a cornerstone for our research, grounding it firmly within the historical and contextual tapestry of Kikuhama. As we chart our course forward, a heightened awareness of the pivotal role played by Japanese sources in unraveling the nuanced intricacies of the local landscape becomes indispensable. The translation of Japanese files into English transcends mere language barriers; it becomes a bridge fostering cross-cultural collaboration, enriching our research endeavors with a depth of understanding that transcends geographical boundaries.

In the specific context of our project, the utilization of Japanese sources facilitated a significant refinement of the definition of the boundaries of Kikuhama. By tapping into census data through Japanese channels, we expanded our understanding of the area beyond the 2019-2022 IQPs, aligning with the official Kyoto census definition of Kikuhama. This only represents a methodological triumph but also underscores the crucial role that Japanese sources play in delineating the true essence of Kikuhama.

The diversity of data, derived notably from the comprehensive visual documentation of buildings and their meticulous categorization, highlights the imperative of sorting the expansive Kikuhama area into smaller, more manageable sections. A robust foundation for the organization of data invites future researchers to navigate the complexities of Kikuhama with enhanced efficiency. By establishing a framework that promotes clarity and accessibility, we contribute to the continuity of informed exploration and discovery within the unique tapestry of Kikuhama's cultural and demographic landscape.

5.1.3 Proactive Engagement with Community Leaders and Businesses for Future Interviews

In reflecting on our research methodology, the value of engaging with the local community through street-level interviews has been evident. However, as we look to refine and optimize future research initiatives, a strategic shift towards involving community leaders and local businesses in the interview process emerges as a key recommendation. Building relationships with influential figures in the community, such as community leaders and business owners, can offer unique perspectives and access to a more diverse array of voices.

Future research teams are encouraged to proactively reach out to community leaders and local businesses at the beginning of their projects. Establishing these connections early on can not only streamline the interview process but also provide valuable insights into the cultural nuances, historical significance, and ongoing developments within Kikuhama. Business, as integral components of the local fabric, can offer distinctive viewpoints on economic trends, changing demographics, and the evolving socio-cultural landscape.

This strategic shift aims to enhance the depth and breadth of the research findings by tapping into the wealth of knowledge held by those who play pivotal roles in shaping the community. It aligns with a more comprehensive approach to data collection, ensuring a well-rounded understanding of Kikuhama that extends beyond the individuals on the streets to encompass the perspectives of community leaders and business stakeholders.

While our research endeavors in Kikuhama have provided valuable insights and laid a strong foundation for future projects, certain considerations must guide the recommendations for future projects. Recognizing the constraints of limited time during our project, future aspects are addressed within the available time frame. The expansion of the project scope, as witnessed during our exploration, highlights the dynamic nature of research environments. Despite the inherent challenges of managing an evolving scope, future teams should embrace this dynamism and adapt their methodologies to effectively navigate unforeseen developments.

Furthermore, the complexity of Kikuhama's cultural landscape and historical transitions necessitates a nuanced and multifaceted approach. The growing scope of research, especially in understanding local customs, historical significance, and demographic dynamics, demands collaboration with community leaders and businesses. This shift towards engagement with influential figures ensures a more comprehensive exploration of the community's fabric, providing depth and authenticity to the research findings.

In the face of challenges and evolving scopes, maintaining organization and methodical approaches to data collection remain paramount. The lessons learned from our endeavor emphasize the significance of careful organization, particularly in handling diverse data sets, categorizing buildings, and managing interview narratives. As the scope expands, future researchers should prioritize structured methodologies to extract meaningful insights and ensure the efficacy of their projects.

While our project may not have achieved every outlined goal within the set timeframe, it serves as a stepping stone for future initiatives. The recommendations aim to guide subsequent research teams in navigating the intricate layers of Kikuhama, fostering a deeper understanding of its unique cultural tapestry, and contributing to the preservation of its rich heritage.

- What sustainable business practices do you currently have or hope to implement in the future?
- What kind of relationship/communication do you have with local government regarding business regulations, development plans etc?
- How do you feel about new types of businesses opening up in the neighborhood?
- What makes doing business in Kikuhama unique compared to elsewhere?
- What challenges have you faced operating a business here? How have you adapted?
- What support or resources would be most helpful to your business going forward?

For older residents:

- How long have you lived in Kikuhama? What changes stand out to you?
- What was Kikuhama like when you first moved here compared to now?
- What are your favorite landmarks or community gathering places?
- Do you feel the needs of older residents are considered in local planning decisions?
- What traditions or buildings are most important to preserve here?
- What would you like to see improved or developed in the future?
- What memories do you most treasure from your time living in Kikuhama?
- What traditions or cultural elements would you most want future generations to preserve?
- What are your biggest hopes and concerns for the future of the neighborhood?
- If you could change one thing about Kikuhama, what would it be?

For students:

- What school do you attend in Kikuhama? How long is your daily commute?
- How long have you lived/studied in Kikuhama?
- What changes have you noticed in the last few years?

- What do you like or dislike about the mix of traditional and modern buildings?
- Are there any places that are special to you culturally?
- What changes would you like to see in the future?
- What mode of transportation do you typically use to get around Kikuhama?
- Where do you like to spend time with friends in the neighborhood?
- What concerns do you have about maintaining a sense of community among younger residents?

For local government workers:

- What are the specific sustainable development initiatives you are working on?
- What development priorities do you have for Kikuhama in the next 4 years?
- How are you balancing preservation and revitalization?
- Have residents provided feedback about changes they want to see?
- Are you drawing inspiration from other neighborhoods in Kyoto or beyond?
- How are you soliciting and incorporating feedback from residents and business owners?
- What challenges have you faced in balancing different stakeholders' interests and needs?

Other Questions

For students:

- What's your perspective on living and studying in Kikuhama?
- Where do you and your friends like to spend time in the neighborhood?
- What opportunities do you see for students in Kikuhama compared to elsewhere?
- How well do you feel Kikuhama's amenities and activities cater to students?
- If you could change one thing to improve student life here, what would it be?

For cultural organization leaders:

- How does your organization preserve and promote Kikuhama's heritage?
- What cultural practices and spaces in Kikuhama are most vital to safeguard?
- How could heritage preservation be better balanced with modernization?
- What are your concerns about cultural loss amidst neighborhood changes?
- What role would you like your organization to play in Kikuhama's future?

Appendix C

Interview Consent Script

We are a group of students from an American college doing research on the Kikuhama community. We will be asking you questions about yourself and your preferences. We believe that this research will lead to a thriving community in Kikuhama that caters to the needs and preferences of its residents and visitors, making it an appealing place to live, work, and visit.

Participation in this interview is completely voluntary and you can stop at any time. The information collected here will be published, but the answers given will remain anonymous. No identifying information will be published.

This interview should take around 30 minutes. If you are interested a copy of the final paper can be provided at the conclusion of our study. Before we begin do you have any questions?

Appendix D

Interview Notes:

Interview 1 (Jiro-san):

Jiro interview

- Overall Life
 - 56 years old
 - lives with his mom, sister
 - Girlfriend comes over sometimes but not from Kikuhama (Weekends)
 - He works Monday Tuesday Wednesday Friday 9-2
 - Cleans and dries not in Kikuhama area (Relatively Easy)
- Buildings
 - Favorite building is the bathhouse
 - Favorite restaurant is the Oden place next door
 - A Kyoto souvenirs and boutiques shop would make Kikuhama better in his opinion
- Takase River
 - Takase river looked good before, and probably will look good after
 - No thoughts on it at this moment
- Overall Kikuhama
 - Nintendo has improved kikuhama
 - In the past Kikuhama was yakuza/prostitution
 - Unsure of if there are actually yakuza members and says it is pretty safe area
 - Land prices have increased
 - Rent has gone up by a decent amount as well
 - Amount of foreigners in the area have increased after Covid
 - Number of Hotels are projected to increase in the coming years
 - Reputation of the area is getting better
 - Container building used to be yakuza headquarters, now owned by nintendo

- No thoughts on it he is interested in how it will develop
- If he could live anywhere it would be Kikuhama because it is close to train stations and it is very convenient and close to major streets

Interview 2:

- 75 years in Kikuhama
 - Parents and grandparents lived in Kikuhama too
- Retired
 - Tends to the crops outside, talks to others
 - Lives with one other person
- Likes Kikuhama but also thinks it is pretty dangerous
 - Weary of Kikuhama (Opposite of Jiro)
 - Still have Yakuza
 - Asked us to be weary of the “bad people” in the neighborhood especially while taking pictures
- Bathhouse is the most important building
- The number of hotels and short term lodging is surprising
- Takase River should be improved
 - Not sure about the outcome of the Yamauchi Foundation project but is positive
- Make it more safer and more shops

About the basic tabulation results such as population of 2015 census

Of the 2015 census conducted as of October 1, 2015, Kyoto City

The basic population statistics (hereinafter referred to as "confirmed figures") were released today by the Statistics Bureau of the Ministry of Internal Affairs and Communications.

We would like to inform you that it has been announced as follows.

Recall

1 Summary of results

(1) All cities -Population is increasing amid a nationwide declining trend-

The population of Kyoto City is 1,475,183 people and the number of households is 705,874.

Compared to the 2010 census results (hereinafter referred to as "2010 results"), the

The number of households increased by 1,168 (0.1% increase) and the number of households increased by 24,293 (3.6% increase).

Table-1 Overview of population and number of households

				3.2

Unit: (10,000 people)

Figure-1 Changes in population and number of households in Kyoto City

(2) Administrative division -Population is increasing in central wards-

Compared to the 2022 results, Nakagyo Ward had the largest increase in population by 4,035 people (previous year).

(up 3.8% compared to the previous survey), followed by Shimogyo Ward with an increase of 3,381 people (up 4.3% compared to the previous survey), and Shimogyo Ward (up 4.3%)

1,849 people increased in Ward (2.2% increase), 1,319 people increased in Ukyo Ward (0.6% increase), and Minami Ward increased by 1,319 people (up 0.6%).

The population increased in these five administrative regions, with an increase of 1,183 people (1.2% increase from the previous year).

Additionally, the number of households increased in all administrative districts.

Figure-2 Composition ratio of population and number of households by administrative division

2 Others

The final figures announced this time, as well as the aggregated results to be published by the government in the future, will be published in Kyoto.

After conducting the city's own analysis, etc., the information and statistics department's homepage "Kyoto City Statistics Port" is published.

In addition to being released sequentially on "Kyoto Taru", a booklet "Kyoto" that summarizes information on population by age and households, etc.

"Urban Population" is scheduled to be published at the end of March 2017.

that's all

Appendix H

2020 Census Data (Machine Translated so there are a few mistakes)

Summary of aggregation results

The population is decreasing and the number of households is increasing

1 Population and number of households

(1) Summary of results and time series comparison

According to the 2020 census, the population of Kyoto City is 1,463,723 people and the number of households is 729,524 households. Compared to the results of the previous survey in 2015 (hereinafter referred to as the "previous survey"), 11,460

The number of people decreased (0.8% decrease), and the number of households increased by 23,650 households (3.4% increase).

Looking at the population by gender, there was a decrease in both men and women, with 692,279 men and 771,444 women.

The number of women decreased for the first time since the 1990 survey, and the number of men has continued to decline since the 1985 survey. sex ratio (female

The number of men per 100 people was 89.74, the lowest value since the survey began.

The number of households has been consistently increasing since the first survey in 1919.

Comparing the results of the current Reiwa 2nd survey and the first survey in 1920, the city area is approximately 13.7 times larger.

The population has increased by approximately 2.5 times, and the number of households has increased by approximately 5.7 times.

(2) Quantitative comparison within the current city area

Kyoto City has undergone numerous changes in its area since its incorporation on April 1, 1899, including mergers with other municipalities. I am. Therefore, if you want to make quantitative numerical comparisons from the past, it is important to consider the effects of these city area changes. will need to be eliminated.

Therefore, the values in the chart below are obtained by re-aggregating the various indicators in (1) above according to the current city area. I will. (Figure-2 and Table-2)

Table-2 Trends in the number of households and population (based on current city area)

Reiwa 2 (21st)	729,524	1,463,723	692,279	771,444	11,460	0.8	1,768	2.01	89.74	198.8	

The population decreased in eight wards other than Nakagyo Ward, Shimogyo Ward, and Minami Ward. In Higashiyama Ward, the number of households has also decreased.

(3) Population and number of households by administrative division

Looking at the population and number of households by administrative division, the administrative district with the largest population and number of households is Fushimi Ward, followed by Ujiyo Ward, then Sakyo Ward. On the other hand, the administrative district with the smallest population and number of households is Higashiyama Ward, followed by Kamigyo Ward and Shimogyo Ward. The number of households was in Kamigyo Ward and Shimogyo Ward. Compared to the previous survey, the population increased in three wards: Nakagyo Ward, Shimogyo Ward, and Minami Ward, but the population increased in the other eight administrative wards. The number of households increased in 10 administrative wards except Higashiyama Ward.

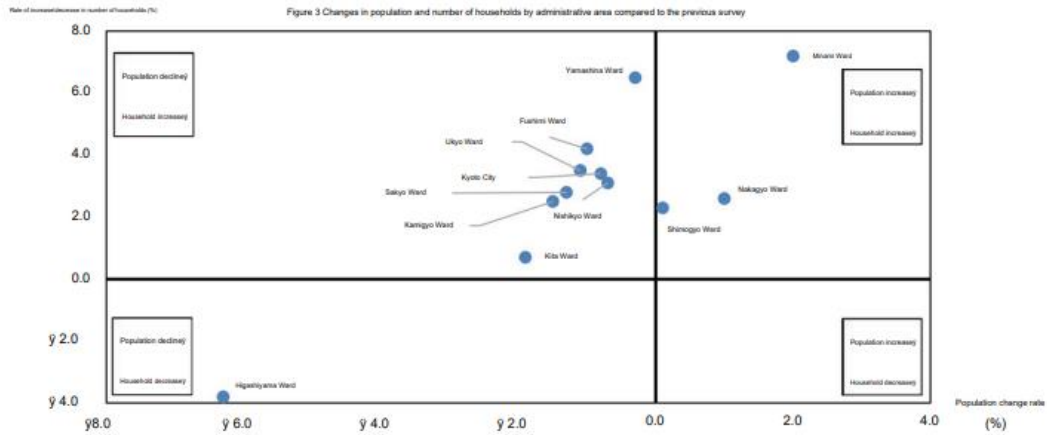

Table-3 Population and number of households by administrative division

Area (ky)	Reiwa 2nd year census results

Young population is at an all-time low, elderly population is at an all-time high

2 Population by age

(1) Population by age 3 categories

Looking at the population by three age categories, the number of children under the age of 15 was 153,610 (10.5%); The working age population up to the age of 64 is 896,782 (composition ratio 61.3%), and the elderly population aged 65 and over is 413,331. (Composition ratio: 28.2%), the elderly population increased, and the working-age population and young population decreased. result, large Since the survey began in 1999, the youth population has reached its lowest level, and the elderly population has reached its highest level. Figure 4 shows the population by three age groups and the composition ratio by administrative area. The proportion of young population in Kyoto City as a whole (10.5%) The four administrative wards, in descending order, were Nishikyo Ward, Minami Ward, Ukyo Ward, and Fushimi Ward. Also, The elderly population is higher than the composition ratio of Kyoto City as a whole (28.2%) in Higashiyama Ward, Yamashina Ward, Kita Ward, and Fushimi Ward. There were six administrative wards: Ku, Ukyo Ward, and Nishikyo Ward.

Figure 5 shows the trends in the aging rate by administrative area over the past 30 years. The pace of aging of the population varies by administrative district. You can see that each is different.

(Note) Regarding the handling of persons whose age is unknown

Persons whose age is unknown in surveys conducted before 2015 are included in the total population, but are not included in the population of each of the three age categories.

Not included in the Release 2nd National Census, the Statistics Bureau of the Ministry of Internal Affairs and Communications divided the population of unknown ages into each age category.

(Unknown supplementary population) has been published, and this table shows the value.

a) Post-gun population (population excluding military personnel and civilian civilians)

b) This is the population published by the Statistics Bureau of the Ministry of Internal Affairs and Communications at the time of publication of the 2010 National Population Census, and does not include persons of unknown age in the three age categories.

c) This is the unadjusted supplementary population of the 2010 Census, which was published by the Statistics Bureau of the Ministry of Internal Affairs and Communications at the time of publication of the 2020 Census.

d) The rate of increase/decrease is calculated by comparing with the population in c).

There are many people born during the second and first baby boom periods and people between the ages of 20 and 24.

(2) Population by 5-year age group

Looking at the population by five-year age groups, the largest group is those aged 45 and over, including those born during the second baby boom. 49 years old, and the next largest group is 70 to 74 years old, which includes people born during the first baby boom (so-called baby boom generation). was. The population of children and young people (15-34 years old) is decreasing nationwide due to the declining birthrate. In our city, the number of people aged 20 to 24 is relatively large. It's a transfer of university students from other cities. is considered to be the main factor. In particular, Kita Ward, Kamigyo Ward, and Sakyo Ward have the largest population aged 20 to 24. It is assumed that students are concentrated around large universities.

Looking at the situation in other administrative wards, in Shimogyo Ward, the average age is 25 to 29, and in Nakagyo Ward, Minami Ward, Ukyo Ward, Nishikyo Ward, and Fushimi Ward. In Higashiyama Ward and Yamashina Ward, the age group with the largest population is 45 to 49 years old, and 70 to 74 years old in Higashiyama Ward and Yamashina Ward.

vnagar.

(Note) Regarding the handling of persons whose age is unknown

In the 2020 National Census, the Statistics Bureau of the Ministry of Internal Affairs and Communications has published the population of persons whose age is unknown and allocates them to each age category (unknown supplementary population).

This table shows the values.

Trends in the population pyramid. Due to the declining birthrate and aging of the population, the shape has changed to a pot shape.

Figure-6 Changes in population pyramid (past 30 years)

The unmarried rate is increasing. The trend of marrying later in life continues

(3) Population aged 15 and over by marital status (4 categories), age (5-year groups), and gender

Looking at the population aged 15 and over by marital status, male and female
 For both sexes, the unmarried rate (the number of unmarried people as a percentage of the population aged 15 and over)
) is increasing. (Table-7)

Looking at the 5-year age group, the unmarried rate for people aged 25 to 29 is
 This is over 80% of men and 70% of women. (Table-6)

Compared to the previous survey, we found that
 In the generation 25-39, all age groups are unmarried.

The rate of marriage is increasing, and the trend toward later marriage continues.

Figure 7-1 Comparison of unmarried rates by 5-year age group (male)

Figure 7-2 Comparison of unmarried rates by age group (female)

Table-6 Trends in unmarried rate for people aged 25 to 39 (see Table-7 for annotations)

(Note) Regarding the handling of persons whose age and marital status are unknown

Those whose age is unknown and whose marital status is unknown in surveys conducted before 2015 are not included in Tables 6 and 7, and the composition ratio and unmarried rate are not included in Tables 6 and 7. are also excluded from the calculation. (However, the "total number" in Table 7 includes those whose marital status is unknown.)

In the Revisa 2nd National Population Census, the Statistics Bureau of the Ministry of Internal Affairs and Communications will divide persons whose age is unknown and whose marital status is unknown and allocate them to each age and marital status.

The total population (known supplementary population) has been published, and the population, composition ratio, and unmarried rate in Tables 6 and 7 are listed using those values.

a) This is the value published by the Statistics Bureau of the Ministry of Internal Affairs and Communications at the time of publication of the 2015 National Population Census, and does not include persons whose age is unknown or whose marital status is unknown.
 b) This is the unspecified supplementary value of the 2015 Census, which was published by the Statistics Bureau of the Ministry of Internal Affairs and Communications at the time of publication of the 2020 Census.
 c) Unspecified supplementary values for the 2020 Census, published by the Statistics Bureau of the Ministry of Internal Affairs and Communications at the time of the publication of the 2020 Census.

The number of single-person households and two-person households increased, while the number of households with three or more people decreased. Households are becoming smaller in number.

3 households

(1) Household size Out of

the total households, those living in facilities such as dormitories and hospitals
 The number of "general households" excluding "households" is 728,744 households.
 The number of households increased by 23,602 (3.3%) compared to the previous survey.
 I added it. Also, the average number of people per household is
 1.97 people, a decrease of 0.08 people compared to the previous survey.
 I did. (Table-8)

Looking at the number of general households by household size, single-person households and
 The number of households with two or more people is increasing, and the number of households with three or more people is decreasing.
 Masu. (Figure-8)

Looking at the number of general households by administrative division, Higashiyama Ward is excluded.
 It increased in 10 administrative districts. The highest rate of increase is
 Minami Ward (7.2% increase from the previous time), followed by Yamashina Ward (6.5% increase from the previous year)
 (up 4.2%) followed by Fushimi Ward (up 4.2%), and
 The rate of increase in single-person households was large throughout the city, and Yamashina
 ward (up 23.3%), Fushimi ward (up 16.1%), Minami ward (up 16.1%)
 This was a particularly large increase (up 14.9%).

Looking at the number of general households over time, we find that
 As the number of single-person households and two-person households increased rapidly,
 The number of employees is decreasing. Second in 1975

Four-person households, which used to be the most common household structure, have decreased since the Heisei era.
 The number continues to decrease and ranks fourth in this 2020 survey.
 I did.

Figure 8: Changes in the number of households by household size

(Note) Until the 1980 survey, where the definition of "household" was different from the current one, "one person semi-household" was added to "ordinary household" and reclassified.

The number of elderly single-person households and elderly couple households is increasing.

(2) Households with elderly people

Among general households, the percentage of households with members aged 65 or older (elderly) was 36.2%.

By administrative division, the percentage exceeds 40% in Yamashina Ward and Nishikyo Ward, and in all areas except Nakagyo Ward and Shimogyo Ward.

The percentage exceeded 30% in all administrative districts.

The number of "single-person households with a member over 65 years old" (elderly single-person households) was 95,220, an increase of 8,910 from the previous survey. Households (10.3%) increased.

Additionally, there were 72,500 "households consisting of only married couples, where the husband is 65 years of age or older and the wife is 60 years or older" (elderly couple households), which was the largest in the previous year.

This is an increase of 2,484 households (3.5%) compared to the previous survey.

Table-9 General households with household members aged 65 or older

	Total number	Percentage of total number of general households	Relatives only			single household (=elderly living alone)	elderly couple household (husband over 65 years old, wife over 60 years old)	
			Nuclear family household	Living husband and wife only

(Note) The increase/decrease rate for 2005 is calculated by comparing with the 2000 results for the current area.

4 General households living in houses

(1) Housing ownership relationship

Looking at the relationship between housing ownership among general households, we find that was the most common at 390,265 households (composition ratio 54.0%).

This was followed by privately rented houses with 276,471 households (38.2%); 35,221 households rented by public, Urban Renaissance Agency, and public corporations (4.9%).

A comparison with the previous survey shows that the number of homeowners increased in the city as a whole, but decreased in Kamigyo Ward and Higashiyama Ward. I did. The number of privately run rental houses increased in the city as a whole, but decreased in Kita Ward, Sakyo Ward, Nakagyo Ward, and Nishikyo Ward. Ta. The number of publicly-run, Urban Renaissance Agency, and public corporation rented houses decreased significantly, while the number of salaried housing and rented rooms increased.

(Note) In the 1980 survey, where the definition of "household" was different from the current one, "one-person quasi-households" were added to "ordinary households" and reclassified.

Furthermore, "Publicly managed/organized/public corporations" refers to "Publicly managed/Urban Renaissance Agency/Public corporation rented houses," and up until the 2000 survey, "Publicly managed/Public corporations/Public corporations"

In the 2005 survey, these were listed as "Publicly managed, urban organization, and public corporation leased houses."

(2) How to build a house

Regarding housing in which general households live,
Looking at the percentage, 384,947 households (composition ratio) live in apartments.
53.3%), followed by detached houses (328,739
Households (45.5%), 8,650 row house households (1.2%)
The order was as follows.

Looking at households living in apartment buildings by the number of floors of the building,
While the number of households living in one- and two-story buildings has decreased,
The number of households living in buildings that are larger than the original building has increased.

Figure 9: Percentage of households by housing construction method

Table-12 How to build a house for a general household living in a house

(Note) The total number includes statuses persons and persons whose country is unknown.

The rate of increase/decrease in 2005 is calculated by comparing the results of 2000 for the current area.

Due to changes in survey classification in 2005, the "Southeast Asia/South Asia" category was deleted and the new categories of "Indonesia" and "Vietnam" were created.

Due to the change in survey classification in 2015, a new category of "India" was created.

Due to the change in survey classification in 2020, a new category of "Nepal" was established.

>> indicates that the value was included in "Others (including "x")" on the right side of the table in a survey before each category was established.
