  - What is the Data?
  - Frequency Correlation Method
  - List of Factors We Analyzed
  - Charts
    - Single Factor
    - Dual Factor
    - Predictive vs. Known During Underwriting
- Conclusion
- Questions

# Genworth Financial

---

- Publicly traded global financial security company
  - Wrote its first policy in 1871 as The Life Insurance Company of Virginia
  - Fortune 500 company
  - Recognized in the S&P 500 Index
- Products include:
  - Long term care
  - Mortgage insurance
  - Annuities
  - Life Insurance

# Long Term Care

---

- Can be broadly defined as care provided by another party for the benefit of those who are unable to care for themselves.
- At least 70% of people over 65 will need long term care services at some point in their lives.
- Long term care insurance helps protect family and friends from the burden of caregiving.
- Helps recipients maintain control and choice of where they receive their care.

# What is the data?

---

- Contains 31,488 policies which had a claim between 1994 and 2003. 26,114 of these policies are closed.
  - *A policy is considered closed if Genworth is no longer making claim payments to it.*
- Of those closed policies in our data set:
  - 15,250 of them were due to death
  - 5,954 of them were due to recovery
  - 3,948 of them were due to benefit exhaustion
  - The remaining 962 were split between 12 miscellaneous reasons

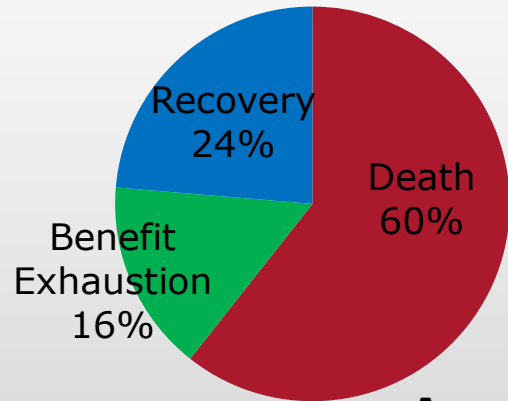

# What is the data?

---

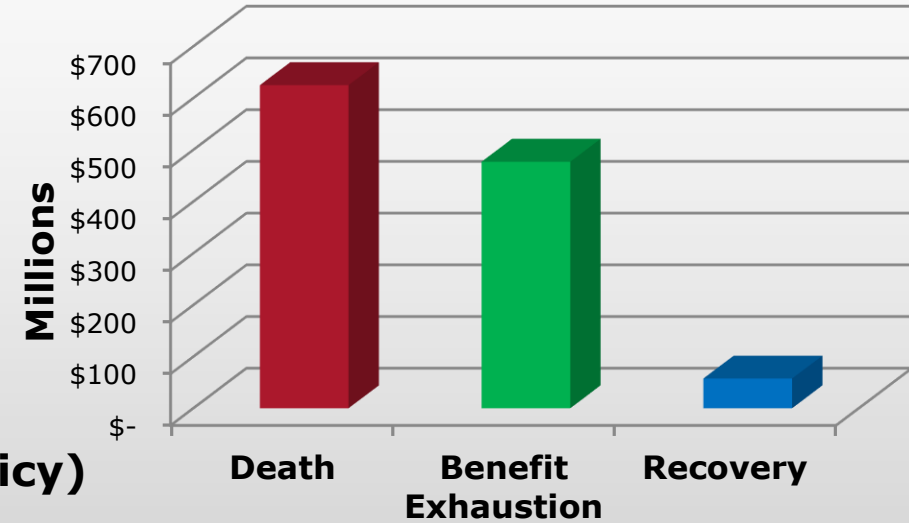

- Contains 31,488 policies which had a claim between 1994 and 2003. **26,114** of these policies are closed.
  - *A policy is considered closed if Genworth is no longer making claim payments to it.*
- Of those closed policies in our data set:
  - 15,250 of them were due to death
  - 5,954 of them were due to recovery
  - **3,948** of them were due to benefit exhaustion
  - The remaining 962 were split between 12 miscellaneous reasons

# Data Analysis

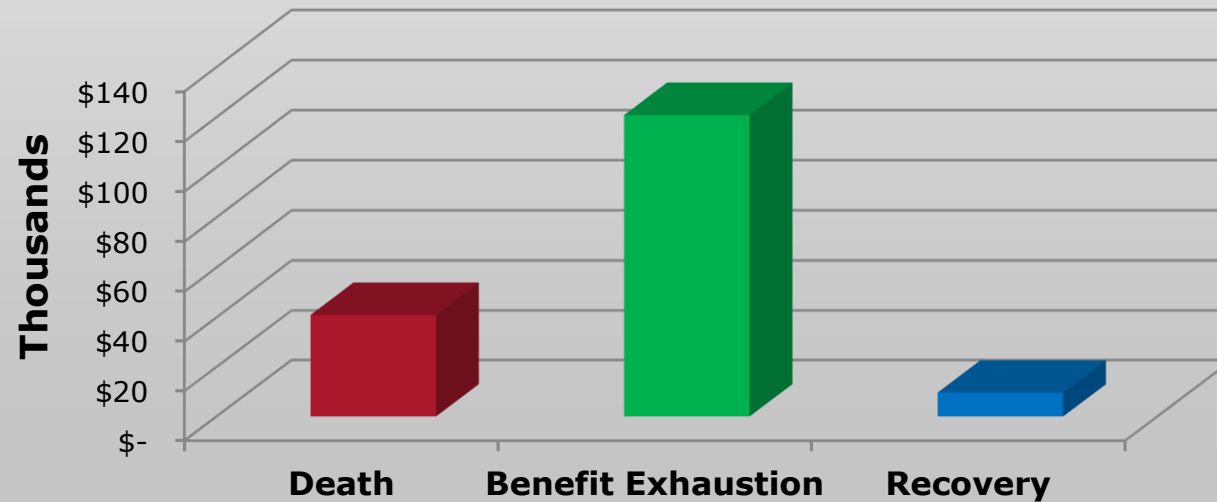

## Breakdown of 26,114 Closed Policies

## Total Claim Payments

## Average Total Claim Payments (Per Policy)

# Frequency Correlation Method

# Frequency Correlation Method

| Close Reason | Count of Exhausted Policies | Count of Closed Policies | Slope    | Total Exhausted Policies | Total Closed Policies |
|--------------|-----------------------------|--------------------------|----------|--------------------------|-----------------------|
| Death        | -                           | 15,250                   | 0.000000 | -                        | 15,250                |
| Recovery     | -                           | 5,954                    | 0.000000 | -                        | 21,204                |
| Other        | -                           | 962                      | 0.000000 | -                        | 22,166                |

| <b>Benefit Period &amp; Gender - 33.4%</b> |                |

- Not all factors are available to predict benefit exhaustion at time of underwriting.
- Not all factors that are available demonstrate predictive abilities.
- The most predictive factor is benefit period, where policies with smaller benefit periods tend to exhaust more frequently.
  - Followed by issue age, benefit increase option, gender, and marital status, respectively.
- When combining multiple predictive factors the result tends to be more predictive.
- This process should allow Genworth Financial to better predict which of their policies are going to close due to benefit exhaustion.
  - Knowing this information will allow Genworth to better refine their underwriting process
