

Tips to be energy smart now!

- **Turn off appliances at the plug** when not using them, especially entertainment systems. Standby power can account for more than 3% of your energy bill.
- **Take shorter showers**, ideally 4 minutes or less. Use a shower timer as a reminder.
- **Set the thermostat of your fridge to the most efficient setting**: your fridge should be set at 3° to 5° and your freezer at -15° to -18°.
- **Use cold water** when washing your hands or cleaning your teeth.
- **Dress for the weather** – before turning on the heating or cooling adjust your clothing to suit the temperature.

Who we are:

Worcester Polytechnic
Institute (WPI) students
from Massachusetts, USA.

Taking the Power Back: Designing a Replicable Neighborhood Grid for Halpin St

What we have done:

- Independent the options for and essential components of microgrids.
- Assessed resources for your street.
- Created appropriate materials that will help your neighborhood implement an alternative energy generation and monitoring systems.

Making it Advantageous

- Saving immediately and optimizing energy usage
- Buying in bulk allows for a cheaper price and producing your own energy saves money
- Storing energy together to use in peak pricing hours to save money.
- Saving money by buy collectively renting an electric car to share

- **Turn off appliances at the plug** when not using them, especially entertainment systems. Standby power can account for more than 3% of your energy bill.
- **Take shorter showers**, ideally 4 minutes or less. Use a shower timer as a reminder.
- **Set the thermostat of your fridge to the most efficient setting**: your fridge should be set at 3° to 5° and your freezer at -15° to -18°.
- **Use cold water** when washing your hands or cleaning your teeth.
- **Dress for the weather** – before turning on the heating or cooling adjust your clothing to suit the temperature.

Australian
Energy
Foundation

Who we are:

Worcester Polytechnic
Institute (WPI) students
from Massachusetts, USA.

Taking the Power Back: Designing a Replicable Neighborhood Grid for Halpin St

What we have done:

- Independent the options for and essential components of microgrids.
- Assessed resources for your street.
- Created appropriate materials that will help your neighborhood implement an alternative energy generation and monitoring systems.

Making it Advantageous

- Saving immediately and optimizing energy usage
- Buying in bulk allows for a cheaper price and producing your own energy saves money
- Storing energy together to use in peak pricing hours to save money.
- Saving money by buy collectively renting an electric car to share

Who we are:
