1. Abstract

To some students, homework can feel more like a chore than a learning experience. In some cases students will not even finish the entire assignment. We believe the problem is that the students are not engaged enough and instead become bored and quit. Our attempted solution to this problem was to infuse humor into the assignment problems to attempt to keep their interest long enough for them to complete the problem set. Using ASSISTments to test our theory, six Skill Builder problem sets were created, each one covering a different high school math topic. The first three problem sets had a comic in the body of each problem (Humor in Problem or HIP), while the second set (Humor Out of Problem or HOP) had a comic after every problem. In every problem set students were required to solve three math problems correctly in a row to complete it. The two types of problem sets were created to simultaneously test the effect of having a distraction inside of the problem compared to having the distraction outside of the problem. Data was collected from students over a four month period where some problem sets had a large sample size and while others had very few. From this small set of data we were able to come to the conclusion that putting distractions inside or outside the problems resulted in longer completion times for students while not increasing completion rate. Although these are the results from the data we collected, the problem sets will continue to be used so that more data can be collected for future study.

2. Introduction to Assistments and Skillbuilders

ASSISTments is a free public online tutoring program that provides immediate feedback to teachers, students, and parents. ASSISTments allows teachers to use pre-built problem sets, edit those pre-built problem sets, or even build their own. Skill Builders are problem sets based on one specific skill where the student is required to solve a pre-determined amount of questions correctly in a row. Students are informed immediately whether their answer is correct and can use hints if they need help, although using a hint marks the question as incorrect.

3. Research Questions

Primary Question

- Do homework problems infused with humor motivate students to complete assignments more often than the same assignments without humor?

Explanatory Question

- Is humor more effective if it is presented at the same time as the homework

problem, or if it is shown after the problem?

- Does the comic shown at the same time as the question act to distract the students from the problem set and increase the time it takes to complete the problem set?

6. Structure of Problem Sets from Humor Outside of Problem

Problems in these studies covered various topics in high school level mathematics

- Understand Vocabulary About Circles
- Law of Sines and Cosines
- Prove Simple Geometric Theorems

Students were given a set of twenty to twenty-five problems and needed to answer six questions correctly in a row in order to complete the assignment. Due to the filler, they actually only had to do three math problems correctly in a row.

- Control Group
 - First, a math question was given to the student
 - After completing this question they were given a filler question and asked to move on to the next math problem
- Experimental Group
 - A math question was given to the students in the same order as the control
 - After completing this question they were given a comic in a standalone problem
 - After the comic they moved onto the next math problem
- For both the control and experimental sets, the student automatically got the filler or comic question correct

In the second study, the math problems were completely normal Skill Builder questions. However, in between each of these normal problems there was either a filler question or a comic depending on which problem set (control or experiment) the student was given. These filler questions and comics can be seen in the examples below (6.1, 6.2).

7.1. Number of Students in the Problem Sets

In most of these problem sets, the ratio of students in the control group to students in the experimental group is pretty similar. Overall we do not have a large sample size for these studies and so our data is unlikely to be statistically different. The reason for the small sample size in these studies is mainly due to the fact that these experiments were run over the course of four months. Due to the way the studies are set up, a specific student's results can only be used once. In order to continue running this study and gather results there needs to be a constant supply of new students. Hopefully once the study is run over a larger time period, the results of the data will become more reliable.

Due to the fact that our results are not statistically different we can not be certain that these results are not just chance. However, we can still view and calculate trends in the data. While not statistically different, the trends can be useful in the future. Once more data is obtained for the studies, the trends that were seen in this study can be looked into further and better results can be obtained.

7.2. Completion Percentages of Different Problem Sets

The completion percentages for the control and experimental groups in all but one problem set are similar. Three of the problem sets have a difference of 7% or less

in the completion percentages. The other problem set, Simple Geometric Theorems, has a difference of 16% in the completion percentage, with the control group completing more often. This problem set only had 5 students, and so any data drawn from this set is not reliable.

One of the problem sets, the Law of Sines and Cosines, has very low completion rates. We believe this is due to a mistake made in the building of the problem set in ASSISTments. Five problems out of the 19 problem set were worded improperly. In these five problems, the students were asked to give their answer in terms of degrees. However, the accepted answer in ASSISTments was in terms of radians. This means that students would get this question incorrect even if they answered it correctly. This was an unfortunate mistake that was not caught until after the data came back. Therefore, we believe the completion rates would be similar to the rest of the problem set completion rates if not for the mistake.

The mistake was fixed once we found it in the problem set. The mistake was still present in the data we obtained our results from, and so we cannot determine anything of statistical importance from that problem set. Now that the mistake is fixed in ASSISTments, any further data obtained from this study should show a dramatic increase in the completion rates of The Law of Sines a Cosines problem set.

Out of the four problem sets that have enough data to establish preliminary trends, two problem sets have a higher control completion percentage and two problem sets have a higher experimental completion percentage. With the data that was collected the completion rates are too close together to determine definitely if the humor was effective in increasing completion rates. Hopefully, when more data is obtained from the studies more definite results can be shown about the effect of humor on the completion rates.

7.3. Average Problems Attempted

The average number of problems attempted per student gives us some insight into how difficult the problem sets were compared to one another. These average problem number attempts along with the completion rates can help show the relative difficulty of the problem sets.

For our three HIP problem sets, the average problems attempted for both control and experiment were roughly 4 problems. The completion rates of these three problem sets were also relatively close together, with the control all within 3% of each other. This data suggests that the three HIP problem sets were close in levels of difficulty.

The data for our three HOP problem sets in completion rates and average problem attempts is much more difficult to draw conclusions from. The Law of Sines and Cosines problem sets had errors in the Skill Builder itself, and so we cannot accurately judge difficulty based on completion rates or average problem attempts. The Simple

Geometric Theorems problem set only had 5 participants, and with such a small sample size it is impossible to determine relative difficulty. The third problem set, Understanding Vocab about Circles, had over a 94% completion rate for both control and experiment, but had higher number of average problems attempted than the three HIP problem sets. This is likely due to the fact that this problem set was multiple choice and the time spent to complete each problem was very low.

7.4. Average Times for Humor in Problem

The average times for the problem sets determines whether or not the comics acted as a distraction during the completion of the problem set. The average times for the 3 problem sets are not consistent. The Conditional Probability problem set had a larger average problem time for the control than the experiment. The other two HIP problem sets had larger average problem times for the experiment than control.

We are unsure whether or not the comics acted as a distraction and increased time spent on problem sets without significantly improving completion rate.

7.5. Average Times for fillers in Humor Outside of Problem

The important times to look at in the HOP problem sets are the amount of time spent on the filler and comic problems. If the students are spending a significant amount more time on the comic problems than the fillers, then the comics may only force the students to take more time than necessary. If the completion rates of the control and experimental groups have similar completion rates, and the comics only act to slow down the students then the comics were ineffective.

In all but the Simple Geometric Theorems problem set, we saw students spending around twice as long on the comic fillers compared to the regular fillers. This suggests that the students spend a significant amount more time looking at a comic than looking at a filler. This most likely means that the students wasted a significant amount of their time on fillers with no real benefit to their completion rates.

7.6. T-Test for Completion Rates

T-Tests are used to determine if two sets of data are statistically significant. The T-Test values for our various problem sets were unfortunately high, signifying that there was a high probability that chance played a large role in the results and that the infusion of humor was not a large deciding factor in the outcome. The problem set Understanding Vocab about Circles was the only one of the problem sets that had a statistically significant result. This problem set had a T-Test value of 0.0651, which is a statistically significant value.

This was expected to a certain extent because our sample sizes were very small. Hopefully as the tests are run for a longer amount of time, the T-Tests will improve.

7.7. T-Tests for Average Problem Time

The T-Test values for average problem times were still high. This means that chance most likely played a large role in the calculation of average problem times. The T-Test results will continue to get lower as more data is collected for the studies. However, there will almost always be a larger variation in average problem times than in completion rates. The Understanding Vocab about Circles problem set was the only set to have a statistically significant T-Test at 0.0455. This problem set had the largest sample size, and so it is more likely that T-Test will come back as a lower value.

Students take varying amounts of time in order to complete the same problem sets and even with more data this will not change. However, the times will begin to level out to an average time that more than likely indicates the difficulty level of the problem set rather than the extra time spent on the humor in the problem sets.

7.8. T-Tests for Average Problem Filler Times

The T-Tests that we calculated for the average problem filler times were statistically significant. The average filler times for the experiment took twice as much time as the average filler times for the control. For the HOP problem sets, the control fillers simply told the student to move on to the next question. The experiment fillers consisted of the comics and the students were then asked whether they liked the comic or not. From our results, we can definitely say the comics slowed the students down when completing the problem set. This is a statistically significant result from the data we obtained. Once enough data is collected to bring the T-Tests for the completion rates down, we can better determine if the comics are slowing down the students unnecessarily. If the completion rates for the experiment end up being lower than the control while the students are still taking more time on the experiment, then it can be shown the HOP problem sets are detrimental.

8. Final Results

The data showed that both humor inside and outside of the problem does not affect student's problem set completion rates and also has a negative externality of increasing the time taken to complete the problem set. These are the general conclusions we can make with the data we currently possess. These conclusions are about the general trends that were noticed in the results, and should continue to be pursued as more data becomes available. While some of our findings are statistically

significant, most of the problem sets simply have too few participants to draw statistically significant results.

9. Further Research

These studies will continue to be run in ASSISTments for a longer period of time. The methods that we used gather useful information from the data is well-documented in this report. This will make it much simpler in the future to take the data dump from ASSISTments and gather useful information. ASSISTments continues to improve the data recorded from the students working on problem sets. As the amount of useful data recorded by ASSISTments increases, the more results and trends can be researched. Some areas of further research might include the possible effect of humor on retention rates. Another area that could be researched is whether humor has a more beneficial effect on the students who struggle to grasp the concepts in the problems.

10. Appendices

10.1. Excel Formulas and Techniques Used

Deciding if a student was control or experimental:

If the problem set is linear, and IF statement can be used to check if the first problem each student did was the control or experimental problem. Depending on which one they did we knew which condition they were in. Formula Example:
=IF(CellWithProblemNumber = ControlProblemNumber, "Control",
IF(CellWithProblemNumber = ExperimentProblemNumber, "Experiment", ""))

Counting how many students complete the control or experimental problem sets:

To do this we first filled out if each student was control or experimental. If they were we then checked if they had mastered the problem set. We used a countIF after to count how many fulfilled that criteria. Formula Example: =COUNTIFS('Data With Calculations'!\$J:\$J,"Control",'Data With Calculations'!\$K:\$K,"mastered")

Calculating time taken to complete each problem:

To calculate the time take to complete each problem we simply did the end time minus the start time, and then checked to make sure the times were not negative or extremely large (taking a break). Formula Example: =IF(AND((EndTime-StartTime)<=600,(EndTime-StartTime)>0),(EndTime-StartTime),"")

Calculating time taken to complete each filler:

To calculate the time taken to complete each filler we created a Lookup table in another sheet in the excel document. This lookup table contained all the problem numbers for the fillers. If a problem number matched a number in the lookup table then we added that problems time to a separate filler list. Formula Example:

```
=IF(COUNTIF('Lookup Table'!$G$2:$G$42,CelltoCheckifinLookupTable),timeTaken,"")
```

CountIF was used here because it returns a 1 or a 0 which the IF statement can read as true or false.

Algebra:

✓ 0.227272727272727

✓ 0.23

Hints:

- Use the formula for conditional probability

$$P(\text{TestB}|\text{TestA}) = \frac{P(\text{TestA and TestB})}{P(\text{TestA})}$$

Note: $P(\text{TestB}|\text{TestA})$ means "TestB given TestA" and is the probability of second event happening given first event already happened.

- Now we substitute in the values we know

$$P(\text{TestB}|\text{TestA}) = \frac{0.1}{0.44}$$

The attendance of a football game depends on the weather. 60000 people will attend if it is sunny, 40000 will attend if it is cold, and 30000 will attend if it rains. The weather for next season is predicted to be 70% sunny, 5% cold, and 25% rainy. Find the expected attendance for a single game next season.

Algebra:

✓ 51500

Hints:

- The formula to find the Expected value is:

$$E(x) = \sum_x xP(x) \text{ where } P(x) \text{ is the probability of } x.$$

- Substituting the values of the probability distribution into the formula gives:

$$E(x) = (60000 \cdot 0.7) + (40000 \cdot 0.05) + (30000 \cdot 0.25)$$

- Simplifying the substitution gives:

$$E(x) = (42000) + (2000) + (7500)$$

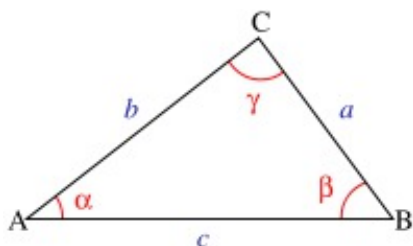

Therefore:

$$E(x) = 51500$$

Enter 51500 as your answer.

 35) Problem #PRAVGUF "PRAVGUF - Law of Sines"

If you are given

- the length of side b to be 8 feet
- the measure of angle β to be 24 degrees
- the measure of angle γ to be 103 degrees

What is the length of side c of the triangle?

Round your answer to the nearest tenth place.

Algebra:

- 19.2

Hints:

- The Law of Sines can be used to solve for side c.

$$\frac{b}{\sin(\beta)} = \frac{c}{\sin(\gamma)}$$

- Plug in the known values for b, β , and γ .

$$\frac{8}{\sin(24)} = \frac{c}{\sin(103)}$$

- After plugging in the values of b, β and γ you get the equation:

$$c = 8/\sin(24)*\sin(103)$$

$$c = 19.1646379813121$$

$$c \approx 19.2$$

The length of side c is 19.2. Type in 19.2.

37) Problem #PRAVGUN "PRAVGUN - Law of Cosines"

If you are given

- the length of side a to be 8 feet
- the length of side b to be 19 feet
- the measure of angle γ to be 39 radians

What is the length of side c of the triangle?

Round your answer to the nearest tenth.

Algebra:

18.5

18.545634218397

- Remember to round to the nearest tenth.

Hints:

- The Law of Cosines can be used to solve for side c .

$$c^2 = a^2 + b^2 - 2ab\cos(\gamma)$$

- After plugging in the values of a, b and γ you get the equation:

$$c^2 = a^2 + b^2 - 2ab\cos(\gamma)$$

$$c^2 = 8^2 + 19^2 - 2*(8)*(19)*\cos(39)$$

$$c^2 = 64 + 361 - 304*\cos 39$$

$$c^2 = 425 - 304*\cos 39$$

$$c^2 = 425 - (81.06)$$

$$c^2 = 343.94$$

- Lastly we square root each side of the equation.

$$\sqrt{c^2} = \sqrt{343.94}$$

$$c = \sqrt{343.94}$$

$$c = 18.545634218397$$

The length of side c is 18.545634218397. **Remember to round to the nearest tenth.**

Type in 18.5 for the answer.

Problem Set "Internal/External Division G-GPE.B.6 EX" id:[PSAJDQN] **Select All** **1) Problem #PRAV4GA "PRAV4GA - Section Formula Internal Division Positives"**

Given the points $A=(4,11)$ and $B=(12,3)$ find the point P that divides the line segment AB internally in the ratio $1:3$.

Enter your answer in the form (x-coordinate,y-coordinate).

Use no spacing.

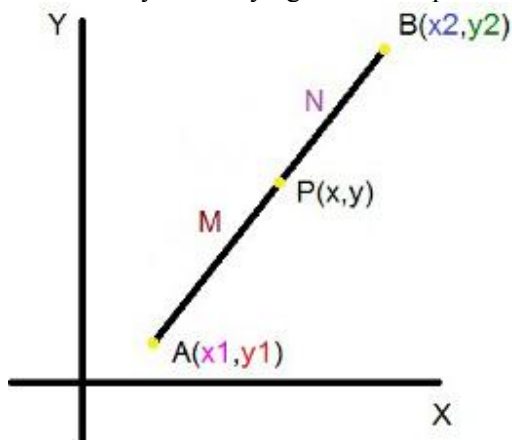

For example. If the x-coordinate is zero and the y-coordinate is zero, the answer would be (0,0).

Fill in:

✓ (6,9)

Hints:

- Remember you are trying to find the point P that divides the line AB internally in the given ratio $m:n$.

For the points (x_1, y_1) and (x_2, y_2) and the ratio $m:n$

The formula for the point is: $(\frac{mx_2 + nx_1}{m + n}, \frac{my_2 + ny_1}{m + n})$.

NOTE: The midpoint formula is the same except that the ratio is $1:1$ so you just have:

$$(\frac{x_2 + x_1}{2}, \frac{y_2 + y_1}{2})$$

- The variables correspond to the numbers given.

$$(x_1, y_1) = (4, 11)$$

$$(x_2, y_2) = (12, 3)$$

$$m:n = 1:3$$

Substituting for the formula gives:

$$\frac{(1*12)-(3*4)}{1-3}, \frac{(1*3)-(3*11)}{1-3}$$

Further simplification gives:

$$\frac{(12)-(12)}{4}, \frac{(3)-(33)}{4}$$

• Final simplification gives:

$$\frac{24}{4}, \frac{36}{4}$$

which is equal to:

6,9

Enter "(6,9)" without the quotes as your answer.

- The variables correspond to the numbers given.

$$(x_1, y_1) = (-4, -3)$$

$$(x_2, y_2) = (-2, -7)$$

$$m:n = 1:3$$

Substituting for the formula gives:

$$\frac{(1 \cdot -2) - (3 \cdot -4)}{1 - 3}, \frac{(1 \cdot -7) - (3 \cdot -3)}{1 - 3}$$

Further simplification gives:

$$\frac{(-2) - (-12)}{-2}, \frac{(-7) - (-9)}{-2}$$

Enter your answer in the form (x-coordinate,y-coordinate).

Use no spacing.

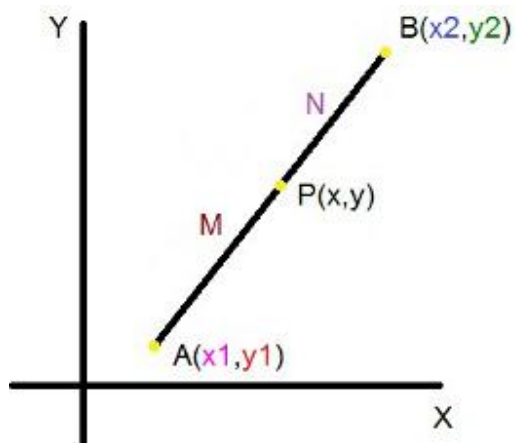

For example. If the x-coordinate is zero and the y-coordinate is zero, the answer would be (0,0).

Fill in:

- ✓ (-15,17)

Hints:

- Remember you are trying to find the point P that divides the line AB externally in the given ratio $m:n$.

For the points (x_1, y_1) and (x_2, y_2) and the ratio $m:n$

The formula for the point is: $(\frac{mx_2 - nx_1}{m - n}, \frac{my_2 - ny_1}{m - n})$.

- The variables correspond to the numbers given.

$$(x_1, y_1) = (-12, 2)$$

$$(x_2, y_2) = (-10, -8)$$

$$m:n = 3:5$$

Substituting for the formula gives:

$$\frac{(3*-10)-(5*-12)}{3-5}, \frac{(3*-8)-(5*2)}{3-5}$$

Further simplification gives:

$$\frac{(-30)-(-60)}{-2}, \frac{(-24)-(10)}{-2}$$

- Remember you are trying to find the point P that divides the line AB internally in the given ratio $m:n$.

For the points (x_1, y_1) and (x_2, y_2) and the ratio $m:n$

The formula for the point is: $(\frac{mx_2 + nx_1}{m+n}, \frac{my_2 + ny_1}{m+n})$.

NOTE: The midpoint formula is the same except that the ratio is 1:1 so you just have:

$$(\frac{x_2 + x_1}{2}, \frac{y_2 + y_1}{2})$$

- The variables correspond to the numbers given.

$$(x_1, y_1) = (3, 12)$$

$$(x_2, y_2) = (11, 4)$$

$$m:n = 3:5$$

Substituting for the formula gives:

$$\frac{(3*11)-(5*3)}{3-5}, \frac{(3*4)-(5*12)}{3-5}$$

Further simplification gives:

$$\frac{(33)-(15)}{8}, \frac{(12)-(60)}{8}$$

- Final simplification gives:

$$\frac{48}{8}, \frac{72}{8}$$

which is equal to:

6,9

Enter "(6,9)" without the quotes as your answer.
