Plastic Pollution Findings

Case Study Findings

Consumer Survey Analysis

Conclusion

# Project Goal

Our goal was to analyze the **implications of regulating single-use waste plastics** in Costa Rica and to provide recommendations regarding the implementation of **MarViva's green tax**.

## **Objective ONE**

Environmental and Health Impacts

## **Objective TWO**

Case Studies regarding Plastic Policies

## **Objective THREE**

Consumers' Willingness to Pay

## **Objective FOUR**

Recommendations and Supporting Evidence

# Overview of Deliverables

Fact Sheets

Presentation

Elaborated Research

## Fact Sheet: Green Tax on Single-Use Plastic

### Environmental Threats

- The human population has produced more plastic in the past 10 years than it has in the past century.<sup>1</sup>
- In Costa Rica, only 9% of the one million tons of waste collected each year is treated and the remainder is emptied into rivers.<sup>2</sup>
- Approximately 8 million tons of plastic are disposed of worldwide into the ocean every year.
- 690 species of organisms have encountered debris in the ocean and 92% of this debris is plastic.<sup>3</sup>
- From 1960 to 2010, the amount of seabirds found to have plastic in their stomachs increased from less than 5% of seabirds to 80% of seabirds, and this number is predicted to continue rising to 99% of seabirds by 2050.<sup>4</sup>
- Recycling rates in Costa Rica are extremely low, with a plastic recycling rate of only 15%.<sup>1</sup>

### Human Health Threats

- Plastic is non biodegradable and can only break down into very small pieces of plastic called microplastics, which are extremely difficult to remove from the ocean. Fish consume plastic microfibers floating around in the ocean which then move up the food chain to humans.
- Bisphenol A (BPA) is used in many plastic products and is harmful to human health. Exposure to phthalates and BPA from plastics can cause health issues like increased rates of heart disease and diabetes.<sup>5</sup> BPA can also affect the brain and prostate glands in fetuses and newborns.
- Nano-size particles, between 1nm and 100nm, can enter the placenta and blood-brain barrier of an organism in addition to causing negative impacts to the gastrointestinal tract and lungs.<sup>7</sup>
- The chemicals nonylphenol and styrene monomers that are commonly used in plastic products have the ability to attract particles in the ocean including metal fragments. The pollutants are ingested and disperse throughout organisms' digestive and endocrine systems, and spread carcinogens and mutagens throughout the environment and into humans.<sup>1</sup>

## La Importancia de un Impuesto Ecológico Sobre los Plásticos de un Único Uso

# Plastic Pollution

“The human population has **produced more plastic** in the **past 10 years** than it has **in the past century**”<sup>1</sup> (2014)

**8 million tons**

of plastic are disposed of into the ocean every year<sup>2</sup>

**Over 690 marine species**

are harmed by ocean debris<sup>2</sup>

**2%**

of trash is recycled in Costa Rica<sup>3</sup>

# Plastic Pollution: Environmental Threats

# Plastic Pollution: Human Health Threats

- Microplastics in food chain
  - Study found microplastics in 25% of individual fish sampled, 22% of shellfish, and 67% of all species sampled.<sup>4</sup>
- Bisphenol A (BPA) causes health issues

# Plastic Pollution: Human Health Threats

- Nano-size particles enter the placenta and also cause negative impacts to the gastrointestinal tract and lungs<sup>5</sup>

# Case Studies

On Single-Use Plastic Policies

# PLASTIC REGULATIONS AROUND THE WORLD

<b>Case study</b>	<b>Regulation Type</b>	<b>Evaluation of Success</b>
<b>Ireland</b>	<b>Tax</b>	<b>Positive outcome</b>
<b>South Australia</b>	<b>Ban</b>	<b>Positive outcome</b>
<b>Germany</b>	<b>Tax</b>	<b>Positive outcome</b>
<b>Buenos Aires, Argentina</b>	<b>Tax</b>	<b>Positive outcome</b>
<b>Israel</b>	<b>Ban</b>	<b>Positive outcome</b>
<b>Portugal</b>	<b>Tax</b>	<b>Positive outcome</b>
<b>Belgium</b>	<b>Tax</b>	<b>Positive outcome</b>
<b>China</b>	<b>Ban</b>	<b>Positive outcome</b>
<b>South Africa</b>	<b>Tax</b>	<b>Short term success</b>
<b>Delhi, India</b>	<b>Ban</b>	<b>Neutral outcome</b>
<b>France</b>	<b>Ban</b>	<b>Neutral outcome</b>

# Ireland

- 2002: Tax of 22 euro cents (€155)
- 94% decrease in plastic bags within weeks<sup>9</sup>
- Initial costs: 1.9 million euros (€1.3 billion)
- Funds within the first year: 10 million euros (€7 billion)<sup>10</sup>

[https://en.wikipedia.org/wiki/Geography\\_of\\_Ireland](https://en.wikipedia.org/wiki/Geography_of_Ireland)

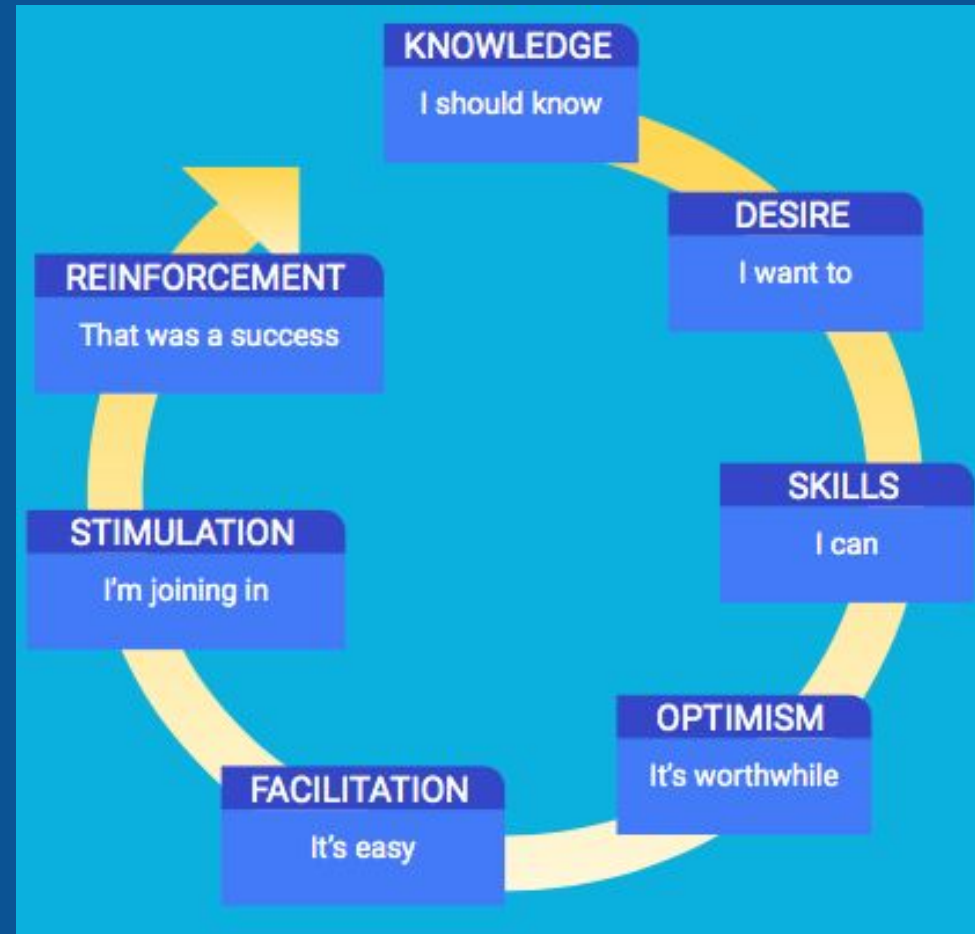

<http://www.zimbo.com/pictures/213VUnq4038+Australia+Barra+Plastic+Bags+in+ug51C2in>

# South Australia

- 2005: Phase out of single-use plastic bags
- 45% decrease in the use of plastic bags<sup>13</sup>
- 8 out of 10 customers were in support of the ban

[https://en.wikipedia.org/wiki/Geography\\_of\\_Australia](https://en.wikipedia.org/wiki/Geography_of_Australia)

# Buenos Aires, Argentina

- 2008 Single-use plastic bag tax evolved into a ban in 2012
- Tax of 0.50 pesos (¢14) for medium sized bags and 7.95 (¢227) pesos for large bags
- About 50% increase in reusable bags<sup>9</sup>

Reusable Bag Use in Supermarkets in Buenos Aires  
(Jakovcevic, et al., 2014)

[https://commons.wikimedia.org/wiki/File:Argentina\\_Blue\\_Marble.png](https://commons.wikimedia.org/wiki/File:Argentina_Blue_Marble.png)

# Delhi, India

[https://en.wikipedia.org/wiki/Geography\\_of\\_India](https://en.wikipedia.org/wiki/Geography_of_India)

- 2009: Ban on the use of all plastic bags
- Ineffective as 94% of people still used plastic bags due to lack of awareness<sup>12</sup>
- A 42.9% decrease of plastic bag usage

## Delhi slaps blanket ban on plastic bags

New Rules To Be Implemented Within A Year

**WHY THIS BAN HAS MORE BITE**

- The ban includes use of all types of plastic bags in all parts of the city.
- It is a blanket ban across the city, so it is not restricted to malls, the party or retail, big hotels, hospitals, schools etc.
- Even so-called phony bags, made from off-bite issues or recycled plastic.
- City gets one full time worker to deal with the matter of the bag.
- The ban is not a total ban. Officials to evaluate the ban.

**FULL COVERAGE For Government of India**

Delhi: After a five-year struggle, Delhi on Tuesday announced a blanket ban on plastic bags. The Delhi cabinet on Tuesday approved implementation of the ban from the use, manufacture and distribution of plastic bags in the city.

The new law, more comprehensive and longer than the one, will be enforced by the end of January 2010. The ban will cover all types of plastic bags used in commercial areas.

"There will be no exemptions in implementing the ban on plastic bags. The ban will be more aggressive this time," chief minister Sheila Dikshit said.

A modification of the ban will be made soon and the government will have one year from the start of the ban to review the law.

The new ban failed to make any difference as the city largely has no good replacement. Therefore, the government has moved on plastic bags to the list.

The ban has been extended to include all types of bags, even those made of recycled bio-degradable plastic of so-called 'eco-bags', which had previously been permitted. The only exemption will be for pharmaceutical bags under the Bio-Medical Waste Management and Handling Rules of 2003.

The ban now includes manufacturing of plastic bags and use of plastic bags for packaging books, magazines or cards.

# Contributing Factors for a Successful Plastic Policy

- A Green Tax
- Informing Consumers
- A Strong Campaign Strategy
- Slowly Introducing the Green Tax
- Providing Alternatives

# Consumer Survey Analysis

# CONSUMER ANALYSIS BASED ON LOCATION

**198 respondents**

# ■ Survey Methods

- Contingent Valuation (CV) Method
- Research Questions:
  - Consumer Habits
  - Willingness to Pay
  - Environmental Awareness
  - Demographics
- Eliminating Bias

# Consumer Habits

## Single-Use Plastic Bags Used per Week

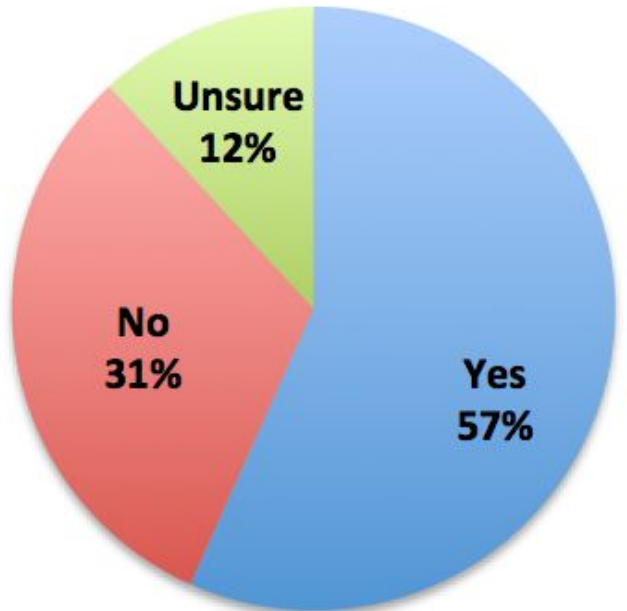

## Single-Use Plastic Bottles Used per Week

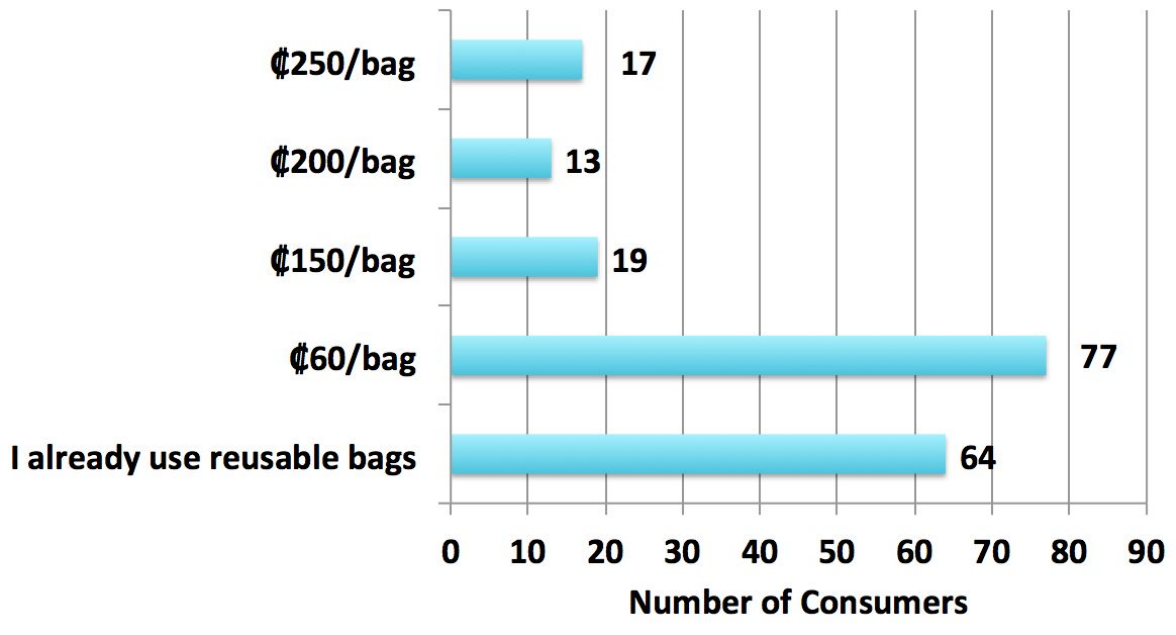

# Willingness to Pay: Single-Use Plastic Bags

## Willingness to Pay

## Price Point

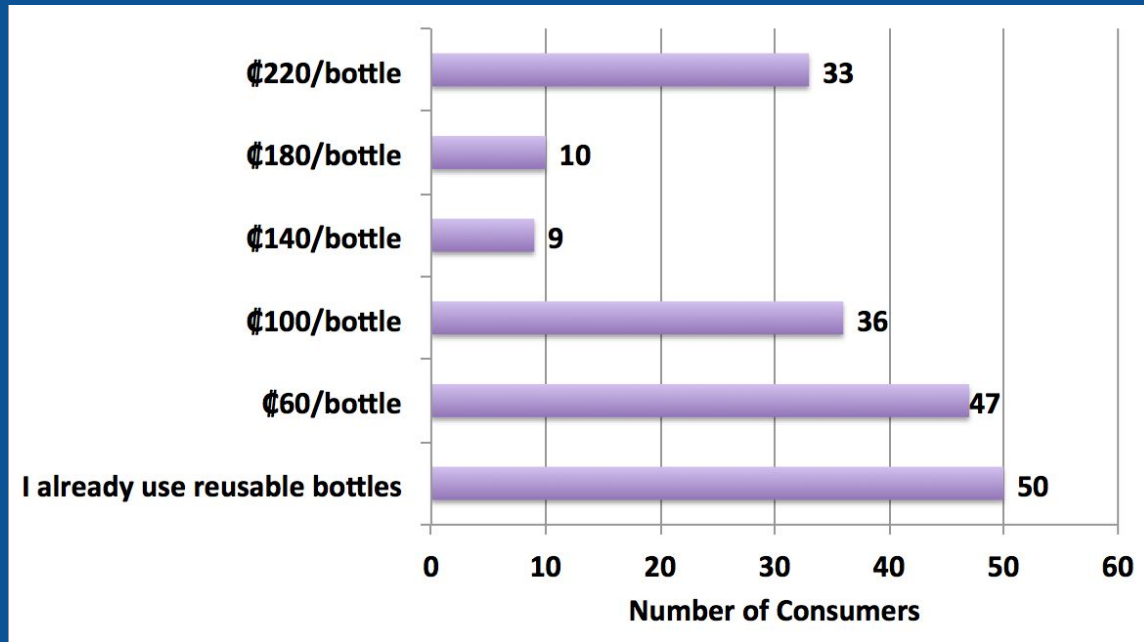

# Willingness to Pay: Single-Use Plastic Bottles

## Willingness to Pay

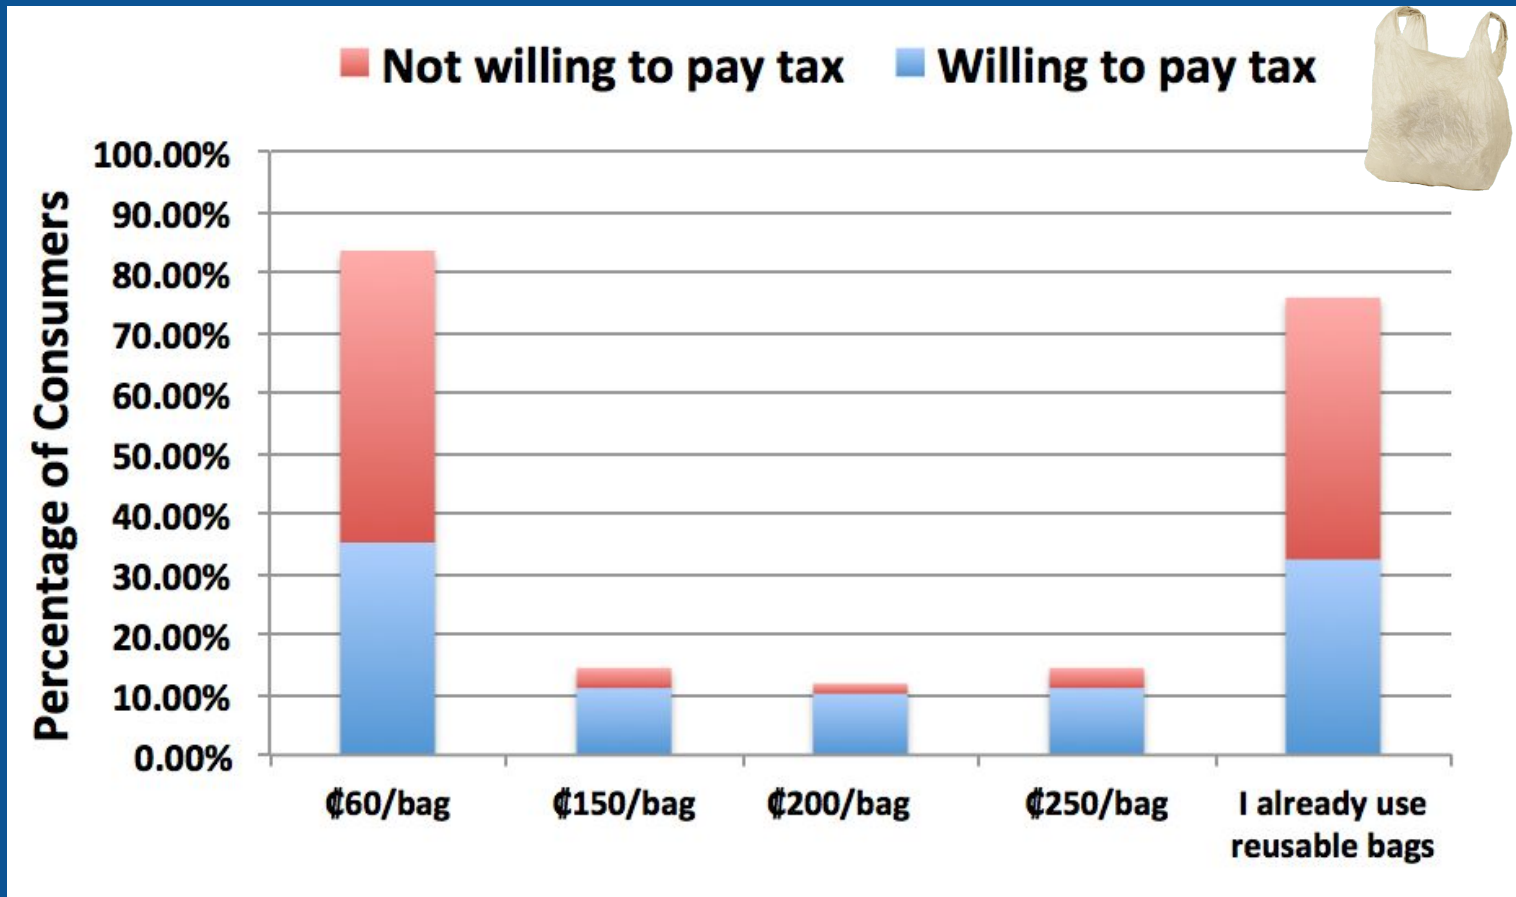

## Price Point

# Key Findings

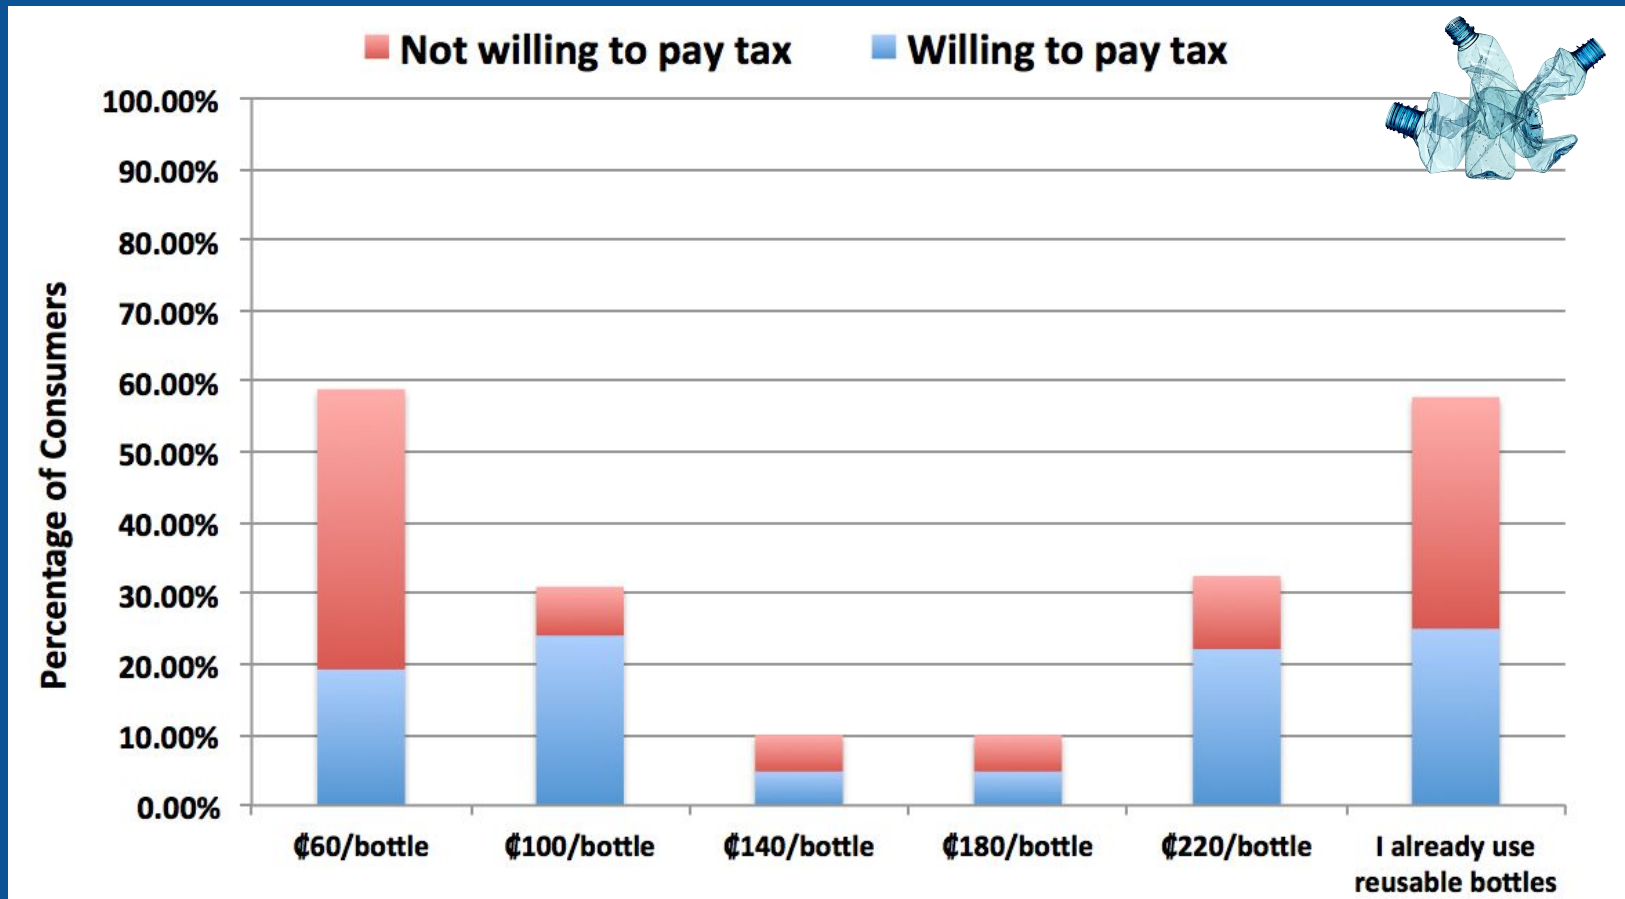

- Consumers choose extremes
- Different interpretations of questions
- 26 consumers not willing to pay, but use reusable bags
- 19 consumers not willing to pay, but use reusable bottles
- Already using the reusable option

# Distribution of Price Point Responses Based on Willingness to Pay for Green Tax

Single-Use Plastic Bags

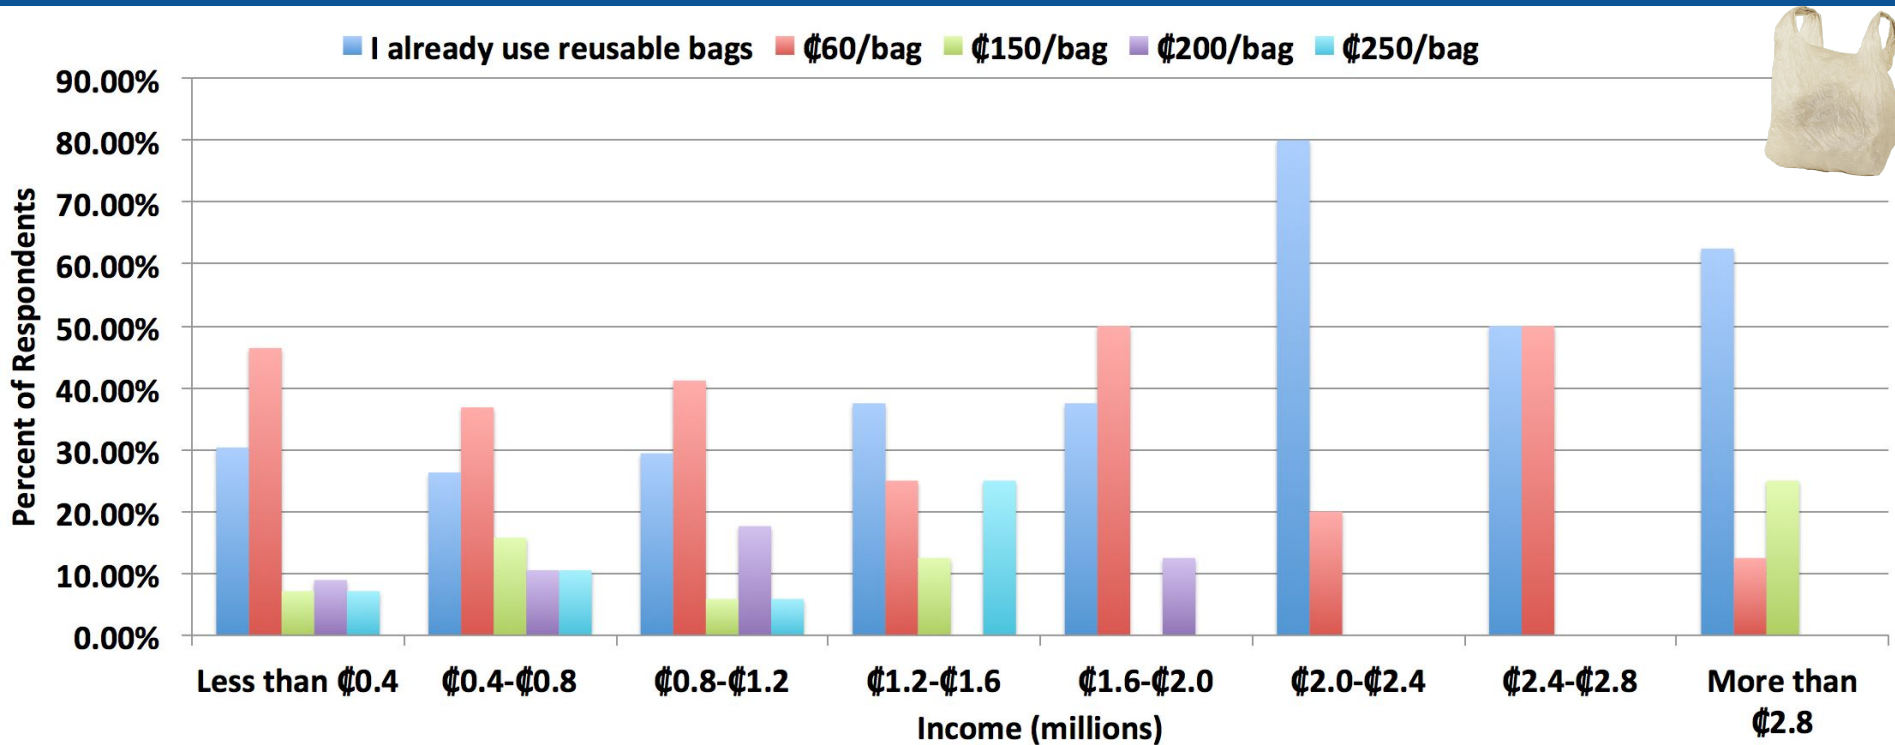

# Distribution of Price Point Responses Based on Willingness to Pay for Green Tax

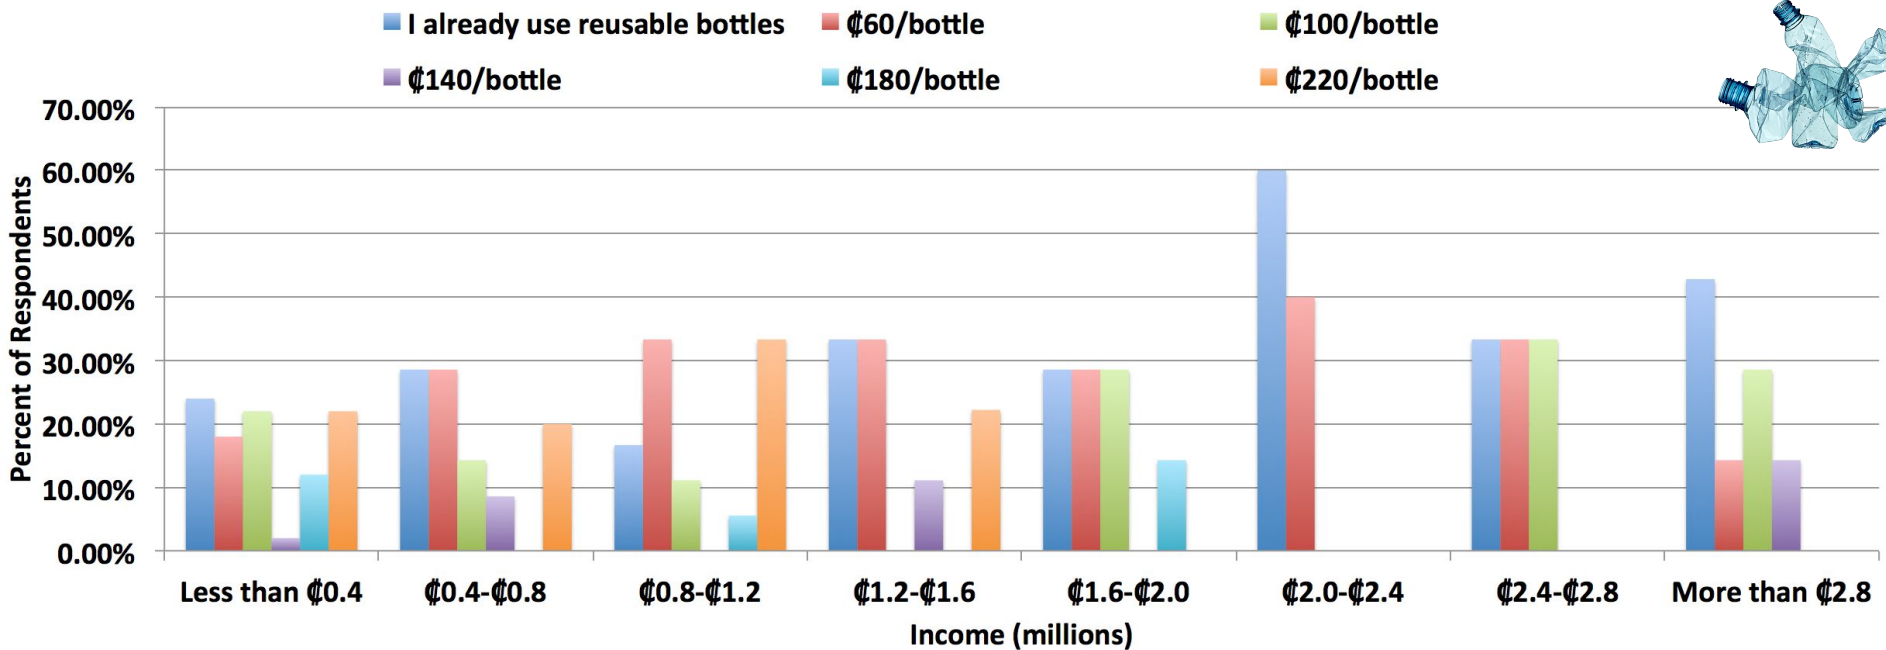

Single-Use Plastic Bottles

# Price Point Preference on Single-Use Plastic Bags Based on Income

# Price Point Preference on Single-Use Plastic Bottles Based on Income

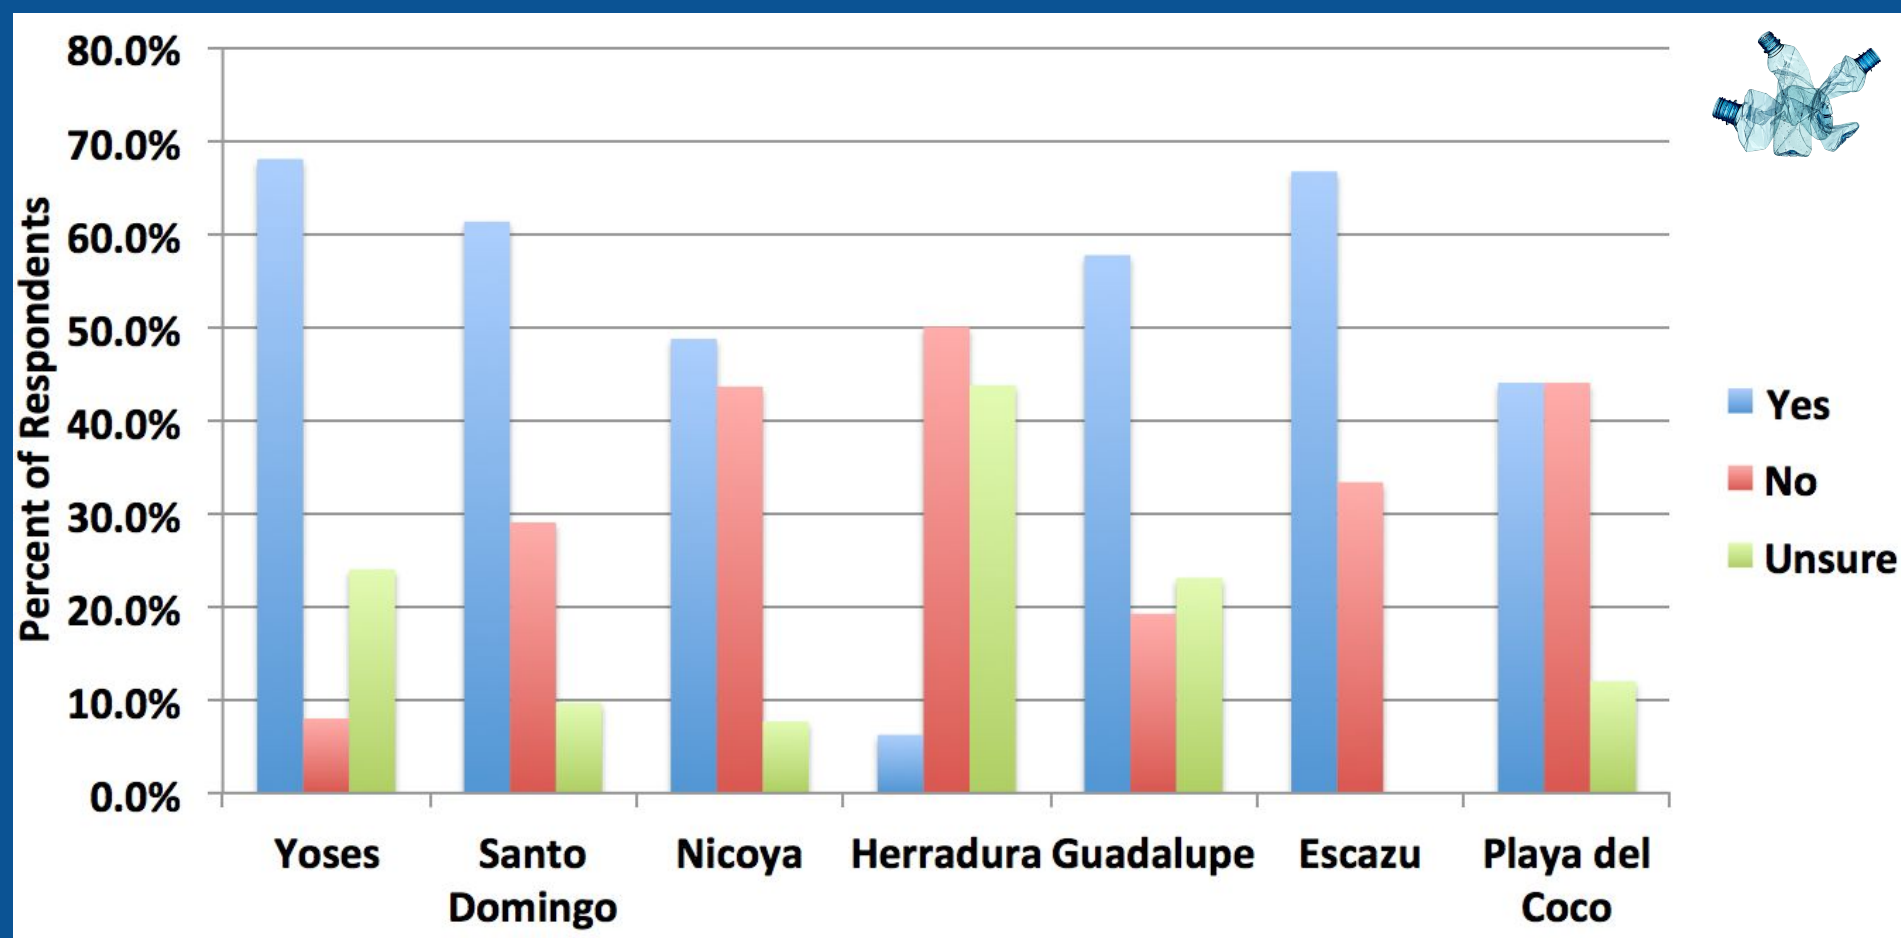

# Willingness to Pay for Single-Use Plastic Bags Based on Location

■ Yes  
■ No  
■ Unsure

# Willingness to Pay for Single-Use Plastic Bottles Based on Location

**88.5%** of consumers

believe disposable plastics are harmful to the environment

**57%** of consumers

are willing to pay a green tax on single-use plastic **bags**

**55%** of consumers

are willing to pay a green tax on single-use plastic **bottles**

**70%** of consumers

believe that a green tax on single-use plastics would reduce plastic pollution

# ₱100

as price of tax for single-use bags and bottles

- 26% chose a price point higher than ₱60 for bags
- 34% already use reusable bags
- 46% chose a price point higher than ₱60 for bottles
- 27% already use reusable bottles

Possible revenue with 50% decrease in single-use plastic use:

₱57,885,622,600 from bags\*

₱33,573,633,600 from bottles\*

\*Very rough estimate based on our collected data

# ■ Recommendations

- **Public/retailer education on new tax**
- **Provide options for alternatives for retailers to use**
- **Focus on rural area education on new tax**
- **Price Tax at 100 Colones for single-use bags and bottles**
- **Follow up study of success of tax**
- **More accurate estimation of economic benefits of reduction**

# ■ Conclusiones

- **High possibility of success in Costa Rica**
- **Increased funding for marine ecosystems**
- **Positive impacts of tax**
- **Convincing evidence for legislators**
