THIS REPORT REPRESENTS WORK OF WPI UNDERGRADUATE STUDENTS SUBMITTED TO THE FACULTY AS EVIDENCE OF A DEGREE REQUIREMENT. WPI ROUTINELY PUBLISHES THESE REPORTS ON ITS WEBSITE WITHOUT EDITORIAL OR PEER REVIEW. FOR MORE INFORMATION ABOUT THE PROJECTS PROGRAM AT WPI, SEE [HTTP://WWW.WPI.EDU/ACADEMICS/PROJECTS](http://www.wpi.edu/Academics/Projects).

## **Abstract**

This work addresses the legal and social dimensions of predatory lending and illegal foreclosure in Massachusetts. In collaboration with The Massachusetts Alliance Against Predatory Lending (MAAPL), we constructed a data system capable of centralizing state-wide foreclosure data. We requested data from all registries of deeds across Massachusetts and constructed a database to hold the data. We also created a user-friendly interface so that MAAPL volunteers, legal analysts, and others will be able to interact with the database. This report details the completed design, implementation, and documentation of the data system as well as suggestions for future work on the system. Our recommendations range from technical work on the database to analysis of legal stakeholder needs for court cases.

# Acknowledgements

We would like to extend our gratitude to the following people who assisted us with this project. We would first like to thank Grace Ross, MAAPL Coordinator and project liaison, for all of her expertise, ideas, and passion about the MAAPL's goals. We would also like to thank our project advisors, Drs. Rick Vaz and Chrys Demetry, for their guidance; as well as Dr. Scott Jiusto, project liaison, for his support and advice.

Additionally, we'd like to thank Steve Florida, MAAPL IT Expert, for his computer science expertise and system knowledge. Finally, we'd like to thank the helpful individuals across the Massachusetts Registries of Deeds and the Secretary of the Commonwealth's Office who assisted us with our data requests.

# Executive Summary

## Introduction and Purpose

If one is at all familiar with predatory lending—the practice of lenders taking advantage of borrowers through hidden fees or subprime loan offers—they are likely to associate it with the 2008 financial crisis. In reality, predatory lending has been around for hundreds of years, and is still a major problem in the 21st century. Moreover, predatory lending is difficult to fight because its definition is highly contested and a great deal of evidence is needed to prove its presence. As one might imagine, predatory lending often leads to borrowers falling behind on payments and defaulting on their loans.

Predatory mortgage loans can lead to foreclosure, which is a long, complex, and confusing process. In Massachusetts, the foreclosure process is typically non-judicial, meaning that lenders and other foreclosing mortgagees self-regulate the process outside of the state court system. Although the process mainly relies on the good faith of parties such as banks, there are many documents filed during the process—such as Affidavits—which attempt to prevent illegalities. However, exploitation of the process is still possible, and due to the complex nature of foreclosure, is difficult to address. In Massachusetts, there are 21 different regional registries of deeds where foreclosure documents are filed. Although each registry has a website where documents and data may be accessed, there is no centralized database which enables analysis of this publicly available data.

The Massachusetts Alliance Against Predatory Lending (MAAPL) is one organization that fights predatory lending and illegal foreclosures through activities such as protesting auctions, buying foreclosed homes, and spreading information about the foreclosure process. One of MAAPL's long term goals is to prosecute serial offenders of predatory lending and illegal foreclosure by analyzing Massachusetts foreclosure data. However, it's currently impossible to analyze all of this data because it is spread throughout the state and stored in the registries of deeds.

The goal of this work was to design and implement a user-friendly database for MAAPL to enable aggregation, research, and analysis of Massachusetts foreclosure data. In addition to creating the database, we collected foreclosure data from various Massachusetts registries of deeds. By continuing to collect and centralize this data, MAAPL hopes to perform analysis that will support court cases against serial predatory lenders and address illegal foreclosures in Massachusetts.

## Methods and Outcomes

To advance MAAPL's work, we pursued the following objectives:

1. Evaluating the current data management system
2. Collecting data from various registries of deeds
3. Implementing changes to the data management system
4. Generating an ongoing plan for the development of the data management system

Before creating the database, we first took a look at the work done by a previous research group in collaboration with MAAPL, which helped to guide the design of our database. We also consulted with some stakeholders to get a sense of how the database will be used, and

what MAAPL's long term vision for it is. Also during this time, MAAPL helped us create a list of documents of interest, shown below with their descriptions, to inform the creation of our data request to various registries of deeds and the organization of the database.

1. **Foreclosure Deed:** documents who purchased the home; usually is directly followed by Affidavit of Sale and Advertisement.
2. **Affidavit of Sale and Advertisement:** usually attached to a Foreclosure Deed; proof the lender followed the law requiring a home to be advertised in the local newspaper for three consecutive weeks, and documentation of the auction.
3. **Certificate of Entry and Possession Notice:** certifies that a home has been entered by a bank representative without contest, which means the home is 'foreclosed by entry'.
4. **Power of Attorney:** document that grants one party the power of attorney of the other. In a broad sense, this means that the grantee can sign documents on behalf of the grantor.
5. **Mortgage:** a type of loan, with documentation (the mortgage and the note) created when a person buys a house by borrowing money from a lender; details the terms of how the borrower repays the lender.
6. **Assignment of Mortgage:** documents a transfer of documents, in this case a mortgage and note, between two parties.
7. **Affidavit:** written and signed sworn statement of fact by a party; several different types may be filed during a foreclosure, i.e. swearing that the foreclosing mortgagee possesses the mortgagor's note
8. **Petition, Order of Notice, Complaint:** several types may be filed during a foreclosure; a Notice to Cure starts the foreclosure process by alerting a homeowner they are in default; a Complaint or Order of Notice is filed in Land Court which requests the military status of the defendant.
9. **Pooled Mortgage:** data stored by the Securities and Exchange Commission which contains information about how mortgages are bought and sold as loans.
10. **Tax Assessment Records:** home valuation records stored by town assessor's offices.

These documents can all be connected to predatory lending and foreclosure, because most of them are filed during the foreclosure process. Understanding the intricacies and content of the documents not only helped us acquire data, but also helped inform the structure and fields of the database.

### ***Data Collection***

We sent a public records request to all 21 registries of deeds across Massachusetts. We requested indexed data and documents related to the foreclosure documents listed above from 2004 to the time our request was processed.

Table 1 shows the registries that provided us with data, what type of data each registry provided, and a short description of the data. In total, we received indexed data from 57%

of the registries and documents from 19% of the registries. The two most common reasons given for not providing the data requested were a lack of IT resources, and that the registries' websites would allow us to manually get the data ourselves. However, the websites for the registries of deeds limit downloads to a maximum of 2000 documents at a time, and our requests covered hundreds of thousands of documents in total.

Table 1: Results of Public Records Request (abbreviated)

Registry	Indexed Data Received?	Document Images Received?	Details
Berkshire Middle	Yes	No	Received all indexed data from Secretary of the Commonwealth contractor
Berkshire North	Yes	No	
Berkshire South	Yes	No	
Bristol North	Yes	Yes	Received data on USB, Not indexed
Dukes	Yes	Yes	Received indexed data and images, images indexed in spreadsheet
Franklin	Yes	No	Data from Secretary of the Commonwealth contractor~
Hampshire	Yes	No	
Middlesex North	Yes	No	
Middlesex South	Yes	No	
Nantucket	Yes	Yes	Received indexed data and images, images indexed in spreadsheet
Plymouth	No	No	Gave access to downloading data through website, but the downloads were inefficient and pdfs instead of spreadsheets
Suffolk	Yes	No	Data from Secretary of the Commonwealth contractor
Worcester South	Yes	No	Received labeled indexed data in csv, it was entered into the database
Worcester North	Yes	Yes	Received indexed data (unlabeled), put images of documents on an external hard drive

### Database

To store the data from the documents deemed important to the foreclosure process, we created a database. This database, shown in Figure 1, was designed to relate most documents to the mortgage referenced in the document. Each mortgage has an ID comprised of unique identifiers: book, page, document number, and registry. Since each foreclosure case is associated with a mortgage, this unique ID for mortgages can be used as the ID of the foreclosure. This system allows for multiple foreclosures at the same address, as there are instances of that happening in the data we received.

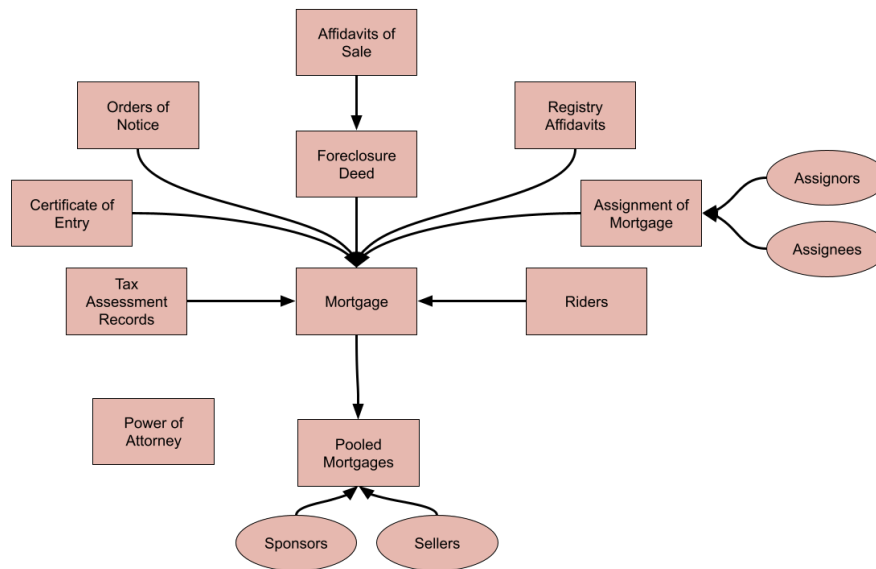

Figure 1: Simplified Entity Relationship Diagram (ERD)

### File System

In order to tie the indexed foreclosure information to the corresponding pdf documents, a file access hierarchy was designed so that individuals searching the database can directly access the relevant files relating to a foreclosure. A file system, depicted in Figure 2, was chosen instead of utilizing MySQL's pdf storage feature to ensure higher system performance.

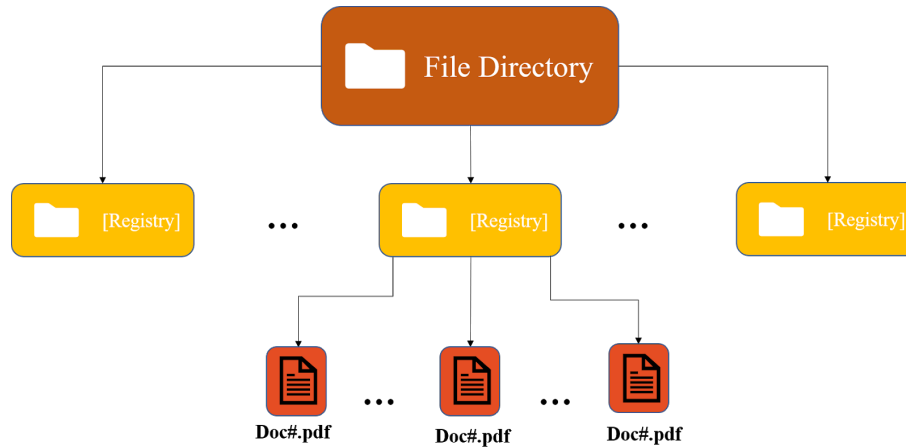

Figure 2: Proposed File access hierarchy for document access through the database.

### *User Interface*

A user interface was created to serve as a “portal” to the database and can be connected to a remote server where data is stored. Included in this interface is a form for searching the database based on certain fields of interest and a form for entering data into the database. Additionally, first steps were taken in implementing an automated data entry system for bulk file uploads. These features minimize the required technical knowledge of an individual using the data system and streamlines the frequent processes one might use the database for. The “portal” also contains a feature to export data from the database into a Comma Separated Value file format (.csv) for analysts to use in their research.

## Recommendations

### *Future Development Guide*

We created a Future Development Guide (Appendix B) with recommendations for the further development of the system, which we summarize here:

1. **Data Collection:** Automate data collection either by implementing Optical Character Recognition Software or scraping the websites of registries of deeds.
2. **Front End Updates:** Add functionality to the user interface, such as the ability to delete entries.
3. **Database Updates:** Add more documents, fields, and tables to the database as needed to fill gaps identified by our team and stakeholders.
4. **File System Implementation:** Implement the file hierarchy designed on the permanent server and connect file references to the database.
5. **Security and Account Management:** Ensure that the front end is secure and user accounts have different permission levels that are strongly enforced. This is a prerequisite before the front end can be made public and linked to other features such as a case intake form.

6. **Bug Fixes & Code Refactoring:** Address any major bugs, inefficiencies, or deficiencies in the system. There does not need to be a dedicated effort for this, but future developers should be cognizant of addressing major issues and refactoring the system to improve performance and readability.
7. **Data Cleaning:** Create a process to filter out extraneous data and standardize the format of the indexed data received from the registries of deeds.
8. **Data Entry:** Create more scripts to enter data in bulk from the registries of deeds into the database.
9. **Legal Analysis:** Tangential to the work on the data system itself, we recommend analysis be completed on the needs of legal analysts who will make use of this database. Work should be completed on identifying the legal process, designing an analysis pipeline, and ultimately implementing or finding an appropriate application to serve those needs.

### *Server Recommendations*

The database is currently hosted using WPI resources. It is our recommendation that a more permanent server solution be found. From our discussions with key stakeholders and our own analysis, it appears a custom server is the preferred solution.

### *Data Recommendations*

We recommend any future data requests be made directly to the Secretary of the Commonwealth's office. Nine of the registries that sent indexed data did so through a contractor through the Secretary of the Commonwealth's office. A few of the registries who did not send data because of a lack of IT resources suggested contacting the Secretary of the Commonwealth's office instead. This also presumably makes collecting the data easier as there should be one contact person and a bulk data hand-off.

# 1 Introduction

Many of those who default on their mortgage or are foreclosed upon are victims of predatory lending. Predatory lending occurs when a lender unfairly and maliciously takes advantage of a borrower. Indicators of predatory lending in the mortgage industry include: hidden fees, subprime loans, adjustable interest rates\* (especially a rate that only adjusts up), and balloon payments† at the end of the loan’s life—all of which can drastically increase the overall loan repayment amount (O’Neil, 2018) (Ross, 2019b). As a separate industry, mortgage lending institutions arose outside of stricter traditional bank regulations beginning in the 1990s (Aaron, 2009); (Ross, 2019b). It is for this reason that the practices listed above are still so pervasive today. Although laws restricting predatory lending were tightened after the crash of the housing market and the subsequent foreclosure crisis in the late 2000s, current laws still have loopholes or are weakly enforced (Ross, 2019b). Furthermore, predatory lenders have an extensive history of targeting people of color, particularly Black and Latino people (Leffall, 2003) (Steil, Albright, Rugh, & Massey, 2018).

Many organizations, such as the Massachusetts Alliance Against Predatory Lending (MAAPL), exist with the mission to spread awareness of, and repair the damage caused by predatory lending practices and the foreclosure crisis. In order to do this, these organizations need to prove the existence of predatory lending and illegal foreclosures. Additionally, they intend to prove that specific communities have been targeted by predatory lenders. What makes this task difficult is that the definition of a predatory loan is contested, and while there may be a lot of anecdotal evidence from individual foreclosures, it is impossible to prove a pattern of predatory lending using evidence from just one case (Leffall, 2003). Data analysis of a large sample of documents relating to foreclosures across Massachusetts would be much more compelling, and may show an aggregation of illegal activity in the foreclosure process by lenders and mortgagees, or show trends of subprime loans targeting specific populations (Leffall, 2003) (Ross, 2019c). However, the data required to perform such analysis does not exist in a centralized location, but instead is scattered across 21 separate registries of deeds in Massachusetts.

If a central database‡ containing all Massachusetts foreclosure documents existed, trends in foreclosure could be more easily identified through data analysis. In 2020, MAAPL sponsored the work of a research group in starting the development of such a system. This group created a proof of concept database to store indexed data from foreclosure documents with the intent of enabling analysis of said documents (Riley, Noel, Dionne, Campbell, & McCarthy, 2020).

Our work intended to take the proof of concept inherited from the previous research group and implement a fully functional data management system§. This system contains a working user interface¶, a comprehensive database, and a large collection of data from 12 of the 21 Massachusetts registries of deeds. In addition to the data system, we provide detailed manuals, guides, and documentation to ensure that future developers will be able to continue working on the system without learning all the intricacies of it. This system and

---

\*Adjustable Interest Rate: An interest rate that can change over the course of the life of the loan.

†Balloon Payment: A large payment at the end of the life of the loan covering the remaining principal amount of the loan.

§Data Management System: A system that not only holds data, but accounts for and manages the ways in which the system might function.

¶Interface: A medium which enables interaction with a complex system in a simplified manner.

corresponding documentation will enable MAAPL to immediately begin using its database.

## 2 Background

This chapter discusses several topics relating to predatory lending, foreclosure, and some related nonprofit organizations. We will begin by providing some background on what predatory lending is, its history and common victims, and the Massachusetts foreclosure process. Next, we mention how the government and nonprofit organizations work to combat the foreclosure crisis. Then, we present information relating to a Massachusetts nonprofit that is fighting illegal foreclosures and evictions by providing services to homeowners at a statewide level. Finally, we review the data management system that this organization currently has in place, and some next steps to ensure its stability.

### 2.1 Predatory Lending’s History and Main Targets

Predatory lending occurs when lenders take advantage of borrowers through avenues such as disclosing hidden fees in fine print or, more commonly, offering subprime–higher interest–loans to (typically) high risk borrowers. A national study of subprime loans from 2004-2010 found that “although subprime loans are typically intended for borrowers who do not qualify for prime loans, research finds that between 10 and 40 percent of subprime [mortgage] borrowers could have qualified for lower-priced prime mortgages” (O’Neil, 2018). Subprime loans can be categorized as loans with an interest rate of 7% or more, or a mortgage that is more than 100% of the value of the home (Ross, 2019b). While a subprime loan does not necessarily signal predatory lending, the vast majority of predatory loans are subprime (Leffall, 2003). Aside from subprime loans, adjustable rate<sup>‡</sup> mortgages and balloon payments<sup>\*\*</sup> are also potential indicators of predatory lending (Ross, 2019b).

Predatory lending is difficult to fight because its definition is highly contested and the line between legal subprime loans and predatory loans is arguable (Leffall, 2003). How does one with little understanding of loans and finance recognize if they are receiving an unfair loan? In a case of predatory lending, the lender knows something about the loan that the borrower does not know or understand.

Although many predatory loans end up with the borrower defaulting on payments, lenders still make money from these loans because of the high interest rates that they charge the borrowers. Additionally, lenders can recover money from borrowers who have defaulted by foreclosing on borrowers’ homes, which we will discuss more in the next section (Feb 20, 2008). While predatory lending is commonly associated with the 2008 housing crisis, abusive lending practices have been around for hundreds of years in the United States, primarily victimizing people of color (Geisst, 2017). Historical discriminatory practices—such as redlining<sup>††</sup>—have systematically disadvantaged minority groups, resulting in predatory loans being more common in those communities (Steil et al., 2018). The consequences are seen today as the primary victims of predatory lending are still mainly Black and Latino people—regardless of class (Leffall, 2003).

The mortgage industry started out completely separate from the banking industry in the 1990s, which led to an expansion of predatory lending throughout the 2010s and into the 2020s. (Aaron, 2009); (Ross, 2019b). Due to the separation of mortgage lenders and banks,

<sup>‡</sup> An interest rate that can change over the course of the life of the loan

<sup>\*\*</sup> A large payment at the end of the life of the loan covering the remaining principal amount of the loan

<sup>††</sup> The act of denying someone a loan or other service due to their occupancy in a low income area. Historically this practice has been used to deny African-Americans and other people of color loans and further segregate wealth and wealth production across racial lines.

mortgage lenders did not have to abide by the same regulations as bankers. In his article, “A Matter of Life and Debt,” Jabulani Leffall notes several statistics pertaining to the demographics of predatory lending victims, including the fact that “from 1995 to 2001 the number of subprime purchase loans to African Americans rose 686%” (2003). Additionally, he notes that although White people procure the largest number of subprime loans, “African Americans are three times more likely than whites to receive a subprime loan,” and even higher-income Black Americans are more likely to receive subprime loans than lower income White Americans (Leffall, 2003). These racial disparities are not localized as they are seen all over the country (Leffall, 2003). Leffall proposes a few reasons why these disparities may still exist, such as a lack of popularized prime lenders in Black communities, and the widespread use of profit-seeking “Ghetto Banks” in poorer communities (2003). Until there are targeted policy changes or widespread studies, predatory lending will continue to be a widespread issue with no foreseeable end.

## 2.2 How Predatory Lending Connects to Foreclosure

Subprime mortgages, a form of predatory loans, are so-called “doomed-to fail” mortgages because they often lead to foreclosure. In the 2008 *Commonwealth v. Fremont* Decision, Massachusetts ruled that predatory loans were illegal and set up borrowers to fail (Ross, 2019b). Foreclosure is a complex process that varies state-to-state, and in this study we focus on the process in Massachusetts. As we have previously noted, the mortgage loan industry is separate from the traditional banking industry. While traditional banks have strict regulations, the mortgage loan industry is less regulated, which can enable predatory lending practices. Based on her years of experience helping people through predatory lending and illegal foreclosure, Grace Ross—a lead organizer of the Massachusetts Alliance Against Predatory Lending (MAAPL)—believes that most homes purchased after 2002 have likely been over-appraised, leading to mortgages that are 120-140% of the actual value of the home (Ross, 2019b). Additionally, in the case of many undisclosed no-doc loans<sup>‡‡</sup>, lenders may exaggerate the income of a borrower so that they are offered a larger loan that they would not normally qualify for (Ross, 2019b). Although the 2008 *Commonwealth v. Fremont* decision states that so-called “doomed to fail” subprime mortgages are illegal and banks must modify these types of loans, there is little enforcement of this decision (*v. Fremont*, 2008) (Ross, 2019b).

Two main categories of foreclosure are judicial and nonjudicial, the latter meaning that the foreclosure process occurs outside of the state court system. While there are multiple foreclosure processes in Massachusetts, the most popular is foreclosure by sale, a nonjudicial foreclosure process. In her series of videos targeted at victims of foreclosure, Grace Ross (Ross, 2019c) explains the complex process of foreclosure by sale by breaking it down into each step:

1. **Default and Cure:** If a borrower can not keep up with their mortgage payments as per the terms set by their mortgage, the lender can declare them in default. The lender must send a specifically-worded default letter to the borrower, which defines a right to cure period, typically 90 days. During this time, the borrower can find ways to get back on top of their mortgage payments, or renegotiate and modify their loan.
2. **Active Military Service:** After the cure period passes, the borrower must show up to Land Court for a test of active military service. If the borrower is an active military

---

<sup>‡‡</sup>a loan which does not require employment documents from the borrower

service member, the foreclosure must be delayed. If not, the process continues. As this process is nonjudicial, the court summons letter may be the only time that the borrower will receive correspondence from a court.

3. **Affidavits in Registry:** Next, the bank submits one or two affidavits to the registry of deeds. The homeowner is not directly notified. These affidavits vary depending on the terms of the mortgage, and commonly establish that the bank has the mortgage and the note, and that the bank is swearing to follow Massachusetts law.
4. **Notice of Sale and Auction:** Afterwards, the formal foreclosure process begins, and the lender must advertise a notice of sale for three consecutive weeks through a local newspaper. The lender must also send a letter to the borrower giving at least two weeks' notice before the date that the borrower's residence will be auctioned off. This letter must include a copy of the lender's note, as well as some background information about the mortgage. The property is then auctioned off. At this time, the lender may also buy back the property.
5. **Post-Foreclosure Notices:** After the auction, the lender must give several specific kinds of notices to the borrower. If the standards for these notices are not met, the lender cannot evict the borrower while the lender still owns the property, and cannot collect any payment from the borrower.

As one may imagine, the foreclosure by sale process can be very difficult for a borrower who knows little about it. Grace Ross notes in her videos that although lenders have many obligations—since the process takes place outside of the courts and many borrowers do not understand the process—it is not rare for lenders to skip steps or not fully fulfil their duties (Ross, 2019c). It is also important to note that even though a property may be auctioned off, that does not mean that the borrower suddenly has to leave the residence, and also does not mean that the borrower has no chance to win back their property. In Massachusetts, ownership of property is separate from the right to occupy a home, and these two parts of law are very different. Post-foreclosure, the lender must legally evict the borrower as a tenant in housing court, where the legal rights of a tenant are much easier to protect. This facet of the law—that foreclosure does not mean eviction—is extremely important for borrowers to understand, as many people win post-foreclosure cases (Ross, 2019a).

Due to the complicated foreclosure and eviction process, homeowners who lack knowledge about the process can be taken advantage of. A lender can easily set a borrower up for failure by offering them a predatory mortgage loan that the borrower is unaware can be renegotiated according to Massachusetts law. Borrowers may be inclined to give up their entire case once they default on their mortgage payments, believing it is their fault that they were not able to keep up with payments. In reality, a borrower who fights all the way to court gives the court a chance to evaluate the predatory lender and win the property back.

## 2.3 Organizations That Fight Foreclosure

This section discusses a few organizations that work to combat the foreclosure crisis, predatory lending, and illegal foreclosures. We also comment on specific organizations in Massachusetts.

### *National and Regional Organizations*

The 2008 housing crisis caused a spike in foreclosures as housing prices plummeted, resulting in mortgages being worth much more than the values of homes (Emmons, 2021). Over 3.1 million Americans have faced foreclosure since the beginning of this crisis, warranting the use of federal and non-profit programs to ease the conditions of the crisis (Christie, 2009).

Some of these programs are organized or sponsored by the federal government. (Bratt, 2017) researched the effectiveness in various federal housing assistance programs and claims that most were ineffective, failing to help as many people as projected. Since government programs are aimed at reducing mortgages by voluntary loan modifications that reduce the interest or principal amount of the loan, these programs reduce banks' profits from mortgages. This is what Bratt claims to be the largest problem with government programs: they ask banks to voluntarily reduce their profits to help with the ongoing effects of the 2008 mortgage crisis. The current government programs alone are not enough to address foreclosure.

There are also a few examples of nonprofit organizations working with financial institutions to provide loans to those facing foreclosure. One of these nonprofits is BlueHub Capital, an organization that works to prevent foreclosure in multiple states. It does this primarily through purchasing homes and selling them back to homeowners with a new mortgage. BlueHub Capital has "helped over 1,100 families avoid foreclosure while reducing their principal balances by about 30%, on average" (*BlueHub SUN*, 2021) through their BlueHub SUN program. Selling foreclosed homes to nonprofits instead of investors, banks, or hedge funds keeps homeowners in their homes and keeps properties from lying vacant.

There are many ways other nonprofits work to address the problem of foreclosure. Some provide legal advice from lawyers; others educate people about the process of foreclosure. Many grassroots organizations protest auctions to prevent foreclosed homes from being auctioned off, especially if the bank did not follow the steps necessary to auction the home (Khan, 2016).

Since the foreclosure process is complicated for borrowers who have no prior knowledge of the process, many predatory practices can happen during this process. This means that borrowers need someone to assist them. MAAPL is one Massachusetts organization working to help people in need by providing victims with legal advice and helping reclaim foreclosed homes, among other activities. MAAPL was founded by City Life / Vida Urbana (CL/VU), The Association of Community Organizations for Reform Now (ACORN), and the Green-Rainbow Party assisted by Boston City Councilor Chuck Turner to combat the foreclosure crisis in 2007 before the housing crisis of 2008 (*MAAPL History*, 2012). MAAPL has become a center for activist groups, legal representation, and other non-profit organizations fighting foreclosure and evictions in Massachusetts. It has lobbied for policy changes to increase the rights of tenants and has bought back hundreds of homes (*MAAPL History*, 2012).

### *Foreclosure Data in Massachusetts*

It is largely recognized that foreclosure and eviction are common problems, but the statistics are difficult to find. (Porton, Gromis, & Desmond, 2020) claim that many surveys to assess the crisis are too targeted in scope, either in demographics or location. Another obstacle is that the court case files are not standardized in format. Desmond et al.'s study on eviction court cases from 12 states found that roughly 22% of the court cases had some form of inaccuracies (vague, missing, or false information) (Porton et al., 2020). Many states

run eviction and foreclosures through state housing court. When Desmond et al. compiled information from multiple states to assess eviction across the United States, the records from different states contained variation in exact information and format (Porton et al., 2020). It is important to minimize inaccuracies because inaccuracy increases bias which can skew analysis (Porton et al., 2020).

Organizations and researchers increasingly make use of large datasets to track patterns. (Porton et al., 2020) proposed that data collection and analysis can be used to combat and isolate incidents of predatory lending and eviction.

Although the various registries of deeds across Massachusetts store foreclosure documents as public information, their websites can be difficult to work with. The websites limit the amount of data downloaded at a time to a maximum of 2000 documents. The websites also do not show all results that match the search criteria. Some registries charge \$1 per page downloaded, and as a result, cost becomes a barrier to aggregating data.

MAAPL is working on creating a database that contains all available Massachusetts foreclosure and eviction data from the 21 registries in Massachusetts since one does not exist (*MAAPL History*, 2012). This database will contain indexed data from the documents relevant to foreclosure from the various registries of deeds as well as file references to where the documents can be found. The analysis that MAAPL performs on the data can then be used to defend victims of predatory lending and illegal foreclosure, and promote legislation protecting homeowners against these problems (Riley et al., 2020). The analysis of this data would also allow for the filing of lawsuits against perpetrators of illegal foreclosure and predatory lending.

## 2.4 Previous Work on MAAPL’s Database

This section discusses MAAPL’s current data system, what a previous research group accomplished, and where work is left to be done. We explain the need to expand on current methods of interacting with the system and a framework to do so, keeping in mind the initial user groups and stakeholders. Finally, we will discuss what principles are useful to evaluate system interfaces.

A 2020 study (Riley et al., 2020) conducted in collaboration with MAAPL resulted in an initial proof of concept for a database design, and mainly involved gathering related information in public records about foreclosures. The research group then contacted local municipalities and registries of deeds to obtain relevant data from 2014 to 2020 on foreclosure cases. The technical aspects of their work involved designing a relational database<sup>§§</sup> to effectively store this data. They also developed a cleaning procedure\* to process the data before entering it into the database. Lastly, they developed a road-map for future work based on the needs of the MAAPL organization. The road-map is a combination of their iterative design suggestions and the defined needs of the data system based on MAAPL’s goals.

The existing work completed by the previous research group affiliated with MAAPL on its database focused heavily on the design and implementation of a structure to hold data. However, a database requires more than just the actual data storage structure to be

---

<sup>§§</sup>A type of database that stores information and how the information relates to other information stored in the database

\*A procedure to systematically remove errors in data when putting it into a database or when performing analysis

useful. The database requires a larger system architecture\*where the database fits in as one single, but important component. Such a system must be designed around the intended user base, meaning MAAPL will have to adopt a formal development strategy for long-term development and system sustainability. A development plan will not only enhance the quality of MAAPL's system, but make it easier for future projects to get to work with a minimal learning curve.

Many modern databases run on some form of Structured Query Language (SQL)<sup>†</sup>. This language makes use of specific query requests to perform a variety of tasks on a collection of data. A person who has no prior coding experience will struggle to interact with a SQL database if they do not understand the language and syntax needed to make requests to the database. In order to extract or input the information they want they must first learn the structure of SQL. As a result of this, public SQL databases make use of a front-end interface. This interface masks the inner workings of the system with intuitive visual choices, making it easy for non-technical users to interact with the database.

---

\*A structure (akin to a house) that must not only have individual working components, but must take into consideration how they operate as a unit

<sup>†</sup>A programming language designed to manage variable amounts of data in an organized way

## 3 Methodology

Our goal was to further develop MAAPL’s data management system and overall data management plan. In order to execute this goal, we created four objectives:

1. Evaluate the current data management system
2. Collect data from various registries of deeds
3. Implement changes to the data management system
4. Generate an ongoing plan for the development of the data management system

In this chapter, we explain how we modified the data management system through the use of these four objectives.

### 3.1 Evaluate the Current Data Management System

The purpose of this objective was to assess the state of MAAPL’s current data management system. By doing this, we were able to better decide on the needs of the system and the priorities of different components. In this objective, we address the following research questions:

1. Who are the stakeholders, and what are their overall needs from the system?
2. How does the system compare to industry best practices and the ten heuristics\* for human-centered design<sup>†</sup>?
3. What are the strengths of the current system, and what needs to be changed?

Before starting any kind of analysis, we identified and interviewed the key stakeholders of the data system. Although the concerns of users entering data were a large focus of our project, we also had to consider the wider scope of the data system’s purpose. This process consisted of discussions with MAAPL liaisons Grace Ross, the organizer of MAAPL; Scott Jiusto, a MAAPL collaborator; and Steve Florida, a MAAPL IT volunteer. During these discussions, we talked about the overall goals of the system, examples of users, and prototypes of the system.

We also used materials from the previous study that created a database proof of concept for MAAPL (Riley et al., 2020) to further assess the overall needs of the data management system. These materials included a Future Development Guide and Guides for Public Data Collection. By reviewing these documents, we were able to see what the previous research team had in mind for the development of the database after the conclusion of their work.

---

\*Approach to a problem that gets accurate enough feedback in a short-term project (*Heuristics - Definition and examples*, n.d.)

<sup>†</sup>A design philosophy in which the ease of user accessibility is the primary consideration.

### 3.2 Collect Data from Various Registries of Deeds

Before implementing the data management system, we first had to assess the data that should be included in the system. From our discussions with stakeholders, we discovered that the database created by a previous research group was not as comprehensive as MAAPL intended it to be. Many documents that were of interest to MAAPL were not included in the previous database, such as mortgage deeds and assignments of mortgage, and needed to be added. MAAPL also wanted data from 2004 to present, whereas the previous research group requested data from 2014 to present. Additionally, many registries of deeds did not respond to the previous research group's data request (Riley et al., 2020).

Worcester County, Hampden County, and Plymouth County were of special interest to MAAPL because of their history with the 2008 housing crisis. Worcester is the largest county in Massachusetts (by land area) and also among the most impacted by the crisis. Hampden County contains Springfield, which was hit particularly hard. Finally, Plymouth County was selected as it was the overall hardest hit county in Massachusetts. MAAPL believes that the effects of the 2008 crisis on Plymouth are often overlooked as there is no major city in Plymouth. MAAPL also wanted a geographically diverse spread of data, since the economies across the state vary depending on location. Dukes County and Nantucket County were targets as they are small islands with unique local economies. We decided to reach out to all 21 registries in Massachusetts because it would not be significantly harder to contact 21 registries compared to contacting the few that MAAPL showed preference towards.

Since we reached out to 21 registries of deeds, we created an email script to request the data of interest. In order to create this script, we first referenced an email script created by a previous research team (Riley et al., 2020). Using this script as well as help from Grace Ross, we created a list of specific documents to request from each registry of deeds. This list of documents is shown below with additional annotations.

1. **Foreclosure Deed:** documents who purchased the home; usually is directly followed by Affidavit of Sale and Advertisement.
2. **Affidavit of Sale and Advertisement:** usually attached to a Foreclosure Deed; proof the lender followed the law requiring a home to be advertised in the local newspaper for three consecutive weeks, and documentation of the auction.
3. **Certificate of Entry and Possession Notice:** certifies that a home has been entered by a bank representative without contest, which means the home is 'foreclosed by entry'.
4. **Power of Attorney:** document that grants one party the power of attorney of the other. In a broad sense, this means that the grantee can sign documents on behalf of the grantor.
5. **Mortgage:** a type of loan, with documentation (the mortgage and the note) created when a person buys a house by borrowing money from a lender; details the terms of how the borrower repays the lender.
6. **Assignment of Mortgage:** documents a transfer of documents, in this case a mortgage and note, between two parties.

7. **Affidavit:** written and signed sworn statement of fact by a party; several different types may be filed during a foreclosure, i.e. swearing that the foreclosing mortgagee possesses the mortgagor’s note
8. **Petition, Order of Notice, Complaint:** several types may be filed during a foreclosure; a Notice to Cure starts the foreclosure process by alerting a homeowner they are in default; a Complaint or Order of Notice is filed in Land Court which requests the military status of the defendant.
9. **Pooled Mortgage:** data stored by the Securities and Exchange Commission which contains information about how mortgages are bought and sold as loans.
10. **Tax Assessment Records:** home valuation records stored by town assessor’s offices.

After researching Massachusetts Public Records Request Law and consulting with an IT employee from a registry of deeds, we created a concisely structured email script (Appendix A) to request data from each registry (*A Guide to the Massachusetts Public Records Law*, n.d.). This script includes specific language which complies with Massachusetts Public Records Request Law so that registries were legally required to respond to our requests within 10 business days with whether or not they could fulfil the request, and an estimated time to fulfill the request (*A Guide to the Massachusetts Public Records Law*, n.d.).

### 3.3 Implement Changes to the Data Management System

Before our work began, MAAPL’s data system consisted of a database structure and some preliminary code written in Python\*, a popular programming language, to input data into the system. While a previous research group produced a proof-of-concept database structure, this structure required further development and revision—such as a user interface—so that non-technical users can interact with it. In this section, we propose a design philosophy for the long-term collaboration between MAAPL and system developers.

#### *Database Development*

The database structure was revised to account for all documents of interest discussed in the previous section. The previous research group did not request Mortgages, Assignments of Mortgages, Orders of Notice, and Affidavits related to foreclosure from the registries of deeds. For all documents, many new data points were identified as important for legal analysis which had to be added to the database structure. Additionally, indexed data from registries of deeds does not necessarily include all of the data that is relevant to legal analysis. For example, there is a large difference between “for value” and “for value paid” legally in these foreclosure documents. The registries of deeds do not include this distinction in their indexed data. In the future, volunteers from MAAPL will use documentation created by our team to manually input these fields. Additionally, for a court case, the specific documents referenced by the database must be provided as evidence. As a result, we created space in each database table to link the indexed data to the actual images of the documents by including a field that contained the name of the file in the storage system we created.

The database was created in MySQL, an open-source Structured Query Language (SQL)<sup>†</sup>. To load data into the database, we created Python scripts to generate SQL statements from

\*A widely used programming language that emphasizes readability of code.

†A programming language designed to manage variable amounts of data in an organized way.

the Excel spreadsheets of data provided to us by the registries. These scripts automate the process of adding the data from the registries to the database. SQL insert statements are uniformly structured with key words followed by the data points in order. Our script extracted the data line by line from the Excel spreadsheet, reordered it to match the database table order, and added blanks where the data did not exist in the spreadsheet. The script created one line of SQL code for each line in the spreadsheet. After the script generated the code necessary to add the data from the spreadsheet, we ran the code to add the data to the database. We were unable to do this for every registry since it required tailoring a different script to each format of indexed data the registries provided.

### *User Interface*

We approached our work in creating a user interface using an iterative design framework. This framework involves assembling and iteratively updating a list of priorities for both the system and the larger project road-map.

In our framework, the system is thought of as a puzzle with many connected pieces, or components. Typically, software projects follow the “software development life-cycle.” In this process, the software requirements are identified, the software is completely designed, then completely implemented, then tested. This also means each software component is created at the same time. This is a very linear process. A shortcoming of this approach is if anything is redesigned, the process goes back to square one.

Instead, we took a more iterative approach. Over the course of development, each component was designed as simply as possible and was thoroughly documented. Over time, each piece became more detailed. This way if demands grow for new features, or a component needs to be changed, changing one piece does not affect the usability\* of others. Frameworks with similar approaches are widely used amongst professional developers and result in stable† systems that can more readily change hands between developers.

In our version of this system, the work completed by (Riley et al., 2020) was modified to new requirements and fits in as one component of a larger system. We built not only the database, but a user interface to perform most typical database interactions such as data entry‡ and searching. We built simple, well-documented system structures that can be modular§, scalable¶, and sustainable||. This not only resulted in system organization that can easily scale with new developments, but also resulted in a reduced learning curve for future developers (such as student project teams and volunteers).

From the information available to us, the initial proof of concept database was hosted locally on the personal computers of the previous researchers. The majority of our development of this system architecture involved updating the database and implementing a web development framework\*\*. We used the Django framework††—an intermediate-level framework written in Python—to facilitate our design and implementation of the database’s user interface.

---

\*A metric for how easy or difficult it is to use an object for its intended purpose.

†Can handle change; Well understood system; Consistently operates as expected

‡The act of putting data into a location, in our context a database.

§Easy to modify; Easy to change.

¶Easy to expand upon; Easy to fit increased demand

||Requires little maintenance on completed parts; Has a clear path of development or method of maintaining.

\*\*For all intents and purposes, the same as Web Application Framework

††A popular open-source web framework that helps assemble large applications.

Our team prioritized implementing the database structure into a larger web application framework\* and writing drivers, which communicate between the database and the user interface. Our next priority was building out an interface to make data entry as easy as possible. Ideally, users could upload Excel files directly to the database, and in the absence of an optical character recognition system<sup>†</sup> capable of automating document intake, there is an entry form for volunteers to manually add data to the database.

### *Practices to Guide System Development*

While our development was guided by information from the stakeholders of the system, we also utilized common metrics to guide the design of our system to ensure it is useful. Some metrics used to guide the system development included documentation of code and object-oriented principles of design<sup>‡</sup>. Additionally, we used Nielsen’s ten usability heuristics for user interface design to inform our construction of the interface. These heuristics were first developed in 1994, and have become industry rules-of-thumb for human-computer interaction (Langmajer, 2020) (in Research-Based User Experience, 2020). The ten heuristics are:

1. Visibility of system status
2. Match between system and the real world
3. User control and freedom
4. Consistency and standards
5. Error prevention
6. Recognition rather than recall
7. Flexibility and efficiency of use
8. Aesthetic and minimalist design
9. Help recognizing, diagnosing, and recovering from errors
10. Help and documentation (in Research-Based User Experience, 2020)

These heuristics helped us address problems that stakeholders and users may not recognize are present in the system. For example, one of the ten heuristics is “help recognizing, diagnosing, and recovering from errors.” In order to evaluate the system through this heuristic, we used the database and asked ourselves related questions like ‘If data is entered incorrectly, can the system recognize the error?’ and ‘Does the system alert the user if data is entered incorrectly?’. Then, we judged whether the database addresses this heuristic well, or if it still needs improvement in that area. By doing so, we were able to better gauge the compatibility of our interface with the average stakeholder such as a MAAPL volunteer, and record specific areas where future developers can advance system development. Since one of

---

\*A development framework with the intent of making it easy to develop web applications.

<sup>†</sup>A system that is programmed to recognize characters in images or PDF documents with the intent of transcribing that information into computer readable text.

<sup>‡</sup>Principles of design used when making effective programs in Object Oriented languages like Python.

our project goals is to improve the sustainability of the data management system, using development guidelines to assess the system—rather than just opinions of stakeholders—helped to standardize the system. This standardization and adherence to general practices will make it easier for future developers to further work on and improve the system.

### 3.4 Generate an Ongoing Plan for Development of the Data Management System

While developing the overall data management system, we also created a plan to continue advancing the system. Our team assessed what the system still needs, such as an analysis component. We created a priority list of work left to be done, and the technical knowledge needed to complete it. This objective was guided by the following questions:

1. What improvement tasks can we accomplish during our project, and what are the highest-priority tasks for future development groups?
2. How do we leave an effective code base to build on?
3. How do we use documentation to ensure that the system works without our direct involvement after the project is completed?

As is mentioned in Section 3.1, we created a list of the data system’s existing functions so we can see which aspects of the system need adjustment and which aspects can be left as-is. This list helped our team categorize which aspects of the system needed attention first during our project, and which tasks could be left for future development. Additionally, we commented on each element of the list with some suggestions and resources for future development.

Documentation was one of the most critical aspects of our project. We created documentation by commenting our code, creating user guides (Appendix C and D), and writing a future development guide (Appendix B). Commenting our code is intended to make the code easier for future technical developers to understand. The user guides provide directions on how to use our user interface and how to interact with the database. The future development guide assembles relevant information to various development projects, which is intended to reduce the amount of training and preparation time.

In order to ensure the sustainability of the data system, our team worked towards establishing relationships with various Massachusetts registries of deeds. In doing this, our team hopes that MAAPL has the ability to collect relevant information and documents that the database needs.

## 4 Project Outcomes

In this chapter we present the results of our data collection efforts, an overview of the software we created to hold the centralized data, and a description of the interface we implemented to access the data easily. We also identify remaining gaps and challenges where future improvements can be made.

### 4.1 Data Collection from Registries of Deeds

We collected data from 12 of the 21 Massachusetts registries of deeds. This section will contain a summary of the data we received, and some of our recommendations for future data acquisition.

#### *Results*

After sending our email to each registry of deeds, we were met with varying degrees of success. Some registries responded to our request saying that they could not fulfill it due to time, personnel, technology, or other constraints. Other registries sent us data within a week, and the rest were able to complete our request within 2-3 weeks. We were also contacted by a consultant to the Secretary of the Commonwealth's Registry of Deeds division, who aided us in gathering data from nine registries. Table 2 describes our results in detail.

MAAPL was focused primarily on receiving data from the Northern Worcester Registry of Deeds, Worcester Registry of Deeds, Hampden Registry of Deeds, and Plymouth Registry of Deeds, as these counties were hit particularly hard by the 2008 housing crisis. We received indexed data from two of these registries (Worcester North and Worcester South) and images of documents from one of those registries (Worcester North). In addition, we received data from 10 other registries, and images from Nantucket and Dukes.

Table 2: Results of Public Records Request

Registry	Indexed Data Received?	Document Images Received?	Details
Barnstable	No	No	N/A
Berkshire Middle	Yes	No	Received all indexed data from Secretary of the Commonwealth contractor
Berkshire North	Yes	No	
Berkshire South	Yes	No	
Bristol Fall River	No	No	N/A
Bristol North	Yes	Yes	Received data on USB, Not indexed
Bristol South	No	No	N/A
Dukes	Yes	Yes	Received indexed data and images, images indexed in spreadsheet
Essex North	No	No	N/A
Essex South	No	No	Communicated with this registry, due to extenuating circumstances was not able to fulfill request
Franklin	Yes	No	Data from Secretary of the Commonwealth contractor
Hampden	No	No	N/A
Hampshire	Yes	No	Data from Secretary of the Commonwealth contractor
Middlesex North	Yes	No	
Middlesex South	Yes	No	
Nantucket	Yes	Yes	Received indexed data and images, images indexed in spreadsheet
Norfolk	No	No	N/A
Plymouth	No	No	Gave access to downloading data through website, but the downloads were inefficient and pdfs instead of spreadsheets
Suffolk	Yes	No	Data from Secretary of the Commonwealth contractor
Worcester South	Yes	No	Received labeled indexed data in csv, it was entered into the database
Worcester North	Yes	Yes	Received indexed data (unlabeled), put images of documents on an external hard drive

### Challenges

Although we gathered a lot of data from most of the registries, we ran into many challenges. The biggest challenge we faced was receiving extremely varied types of data. While we requested indexed data as well as the documents associated with this data, only two registries were able to provide us with images of the documents. The different database formats

of each registry also proved to be a challenge, as some registries had no problem looking up data for us and sending everything we requested in spreadsheet form, while others were only able to provide us with some of the requested documents in nonstandard file formats. Another difficulty with these requests was the sheer size of the data, so we needed to mail a USB or set up a Google Drive folder to acquire data from some registries. Overall, we never got exactly what we wanted. Some registries were not able to properly sort through the data types in their database, so they sent us far more data than we had requested. Other registries did not index all of the documents we requested, and could only send us some data from a few of the documents we requested.

## 4.2 Construction and Implementation of the Database

Data is useless without context. The database we created not only holds data we gathered from the registries of deeds, but also associates the documents together to provide context. This section discusses the structure and implementation of the database.

### *Database Structure*

The database is structured to hold data from the following documents, which are stored in registries of deeds unless otherwise specified:

1. **Foreclosure Deed:** documents who purchased the home; usually is directly followed by Affidavit of Sale and Advertisement.
2. **Affidavit of Sale and Advertisement:** usually attached to a Foreclosure Deed; proof the lender followed the law requiring a home to be advertised in the local newspaper for three consecutive weeks, and documentation of the auction.
3. **Certificate of Entry and Possession Notice:** certifies that a home has been entered by a bank representative without contest, which means the home is ‘foreclosed by entry’.
4. **Power of Attorney:** document that grants one party the power of attorney of the other. In a broad sense, this means that the grantee can sign documents on behalf of the grantor.
5. **Mortgage:** a type of loan, with documentation (the mortgage and the note) created when a person buys a house by borrowing money from a lender; details the terms of how the borrower repays the lender.
6. **Assignment of Mortgage:** documents a transfer of documents, in this case a mortgage and note, between two parties.
7. **Affidavit:** written and signed sworn statement of fact by a party; several different types may be filed during a foreclosure, i.e. swearing that the foreclosing mortgagee possesses the mortgagor’s note
8. **Petition, Order of Notice, Complaint:** several types may be filed during a foreclosure; a Notice to Cure starts the foreclosure process by alerting a homeowner they are in default; a Complaint or Order of Notice is filed in Land Court which requests the military status of the defendant.

9. **Pooled Mortgage:** data stored by the Securities and Exchange Commission which contains information about how mortgages are bought and sold as loans.
10. **Tax Assessment Records:** home valuation records stored by town assessor's offices.

The database is a relational database. This means that it associates different pieces of information across different database tables. The database is structured to associate all tables to a specific mortgage, as can be seen in Figure 3. Each mortgage has a mortgage ID generated from the book, page, document number, and registry it is stored in. All other document tables have a column that stores the mortgage ID of the related mortgage. As a result, all documents related to the same foreclosure contain the same mortgage ID.

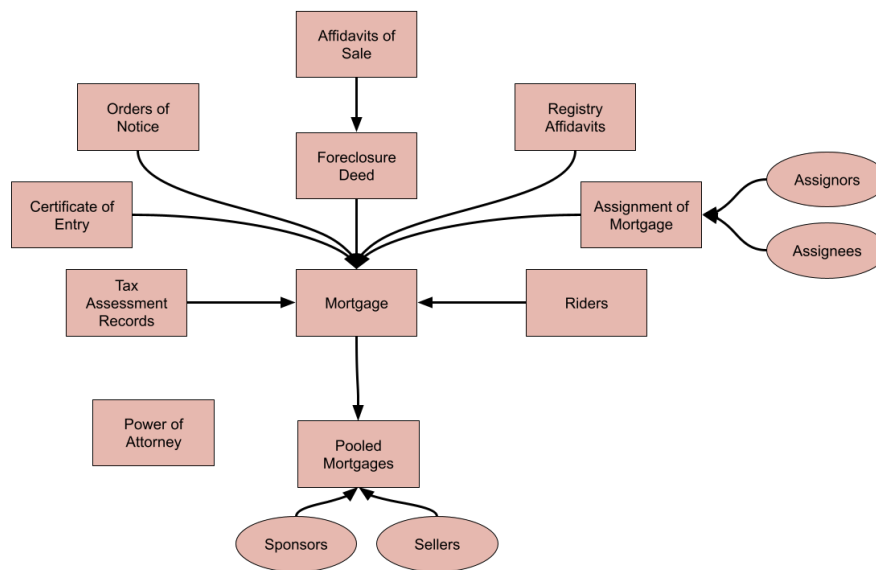

Figure 3: Simplified Entity Relationship Diagram (ERD)

Databases are formatted so that each row in a table is one object. For example, one row in the mortgage table is one unique mortgage. Each column is a particular piece of information, such as the ID of the mortgage. This ID is generated from the book, page, document number, and registry the document is assigned by the registry of deeds. The combination of these data points is enough to uniquely identify each mortgage. For other tables to refer to a specific mortgage, they have a column that stores the ID of the related mortgage. This is represented in the simplified Entity Relationship Diagram (ERD) as arrows pointing from a given table to the mortgage table. Power of Attorney documents are not related to any specific document because the associated grantors and grantees can be banks or people involved in any of the documents. If the Power of Attorney table contained references to specific tables, there would have to be multiple versions of power of attorney—bank to bank, bank to person, person to person, etc. Since it is simpler to have one Power of Attorney table, the people and banks involved in Power of Attorney documents must be cross-referenced against the associated documents by users.

### ***Database Implementation***

The database was implemented using MySQL, an open-source Structured Query Language (SQL)\*. The database is hosted on a server that the user-interface interacts with, which keeps the database backed up in a secondary location. In Appendix D, a detailed breakdown of the database structure can be viewed. The tables contain a combination of data points from the indexed data and data points regarding specific information in the document. Each document is given either a book and page number or a document number in the registry of deeds. There are two types of land in Massachusetts: recorded land, which comprises a majority of Massachusetts, and registered land, which has more regulations. A document with a book and page number is a document regarding recorded land, and a document with a document number is a document regarding registered land.

The data that we received from different registries was not uniformly structured, and needed to be cleaned before it could be entered into the database. There are two main ways the data is structured: having each document be represented by one row in the spreadsheet, or having one row per party involved in a document. For example, one mortgage that had two mortgagors and one lender would either have one row in the spreadsheet, or three rows: one row for each mortgagor and one row for the bank.

There are some gaps in the data we were able to load into the database. As previously discussed, many fields of the database contain information that is not indexed by the registries, such as how many times the word “assigned” was mentioned in the advertisements in Affidavits of Sale. As a result, when we loaded data into the database from the indexed data from the registries of deeds, many fields were left blank. Another limitation of the database is the amount of extraneous data provided by the registries. The data provided by each registry contained all Power of Attorney documents and Mortgages generated from 2004 to the time our request was processed, not just the Power of Attorney documents or mortgages related to foreclosure cases. Some registries also sent data containing additional documents not in our request. This required our team to filter out extraneous data before entering data into the database.

Since each registry structured their indexed data differently, we were unable to put all of the data we received into the database. This is because entering it will require writing scripts for each document type and for each registry. The database currently contains

---

\*A programming language designed to manage variable amounts of data in an organized way.

Worcester South’s data, as it was the largest and most thoroughly labeled data we received. Its inclusion added over 100,000 entries to the database.

### 4.3 The User Interface for Search and Data Entry

The graphical user-interface, written using Django—a Python web framework—allows users to interact with the database without using SQL, streamlining the procedure of obtaining or entering information. This component is crucial in considering the types of users the system will have, such as MAAPL volunteers doing manual data entry.

#### *Search*

One of the main functions of the user-facing front-end application is searching the database. Figure 4 depicts the search form that allows users to filter through foreclosure-related data.

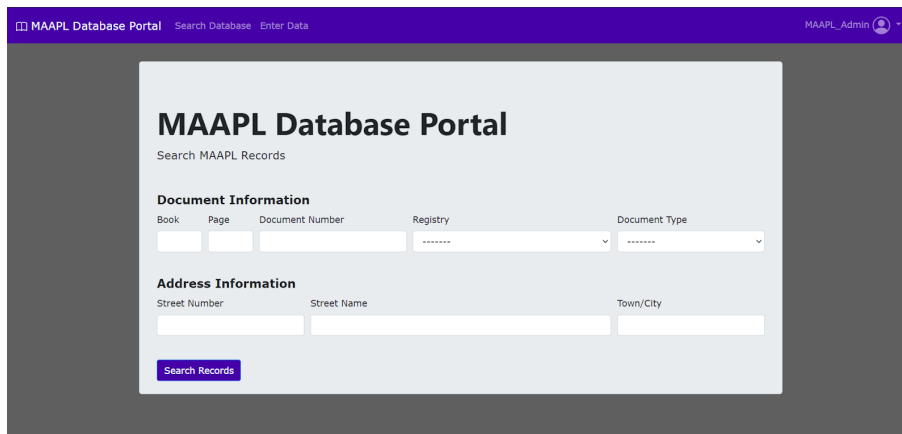

The image shows a web browser window displaying the MAAPL Database Portal. The page has a purple header with navigation links for 'Search Database' and 'Enter Data', and a user profile for 'MAAPL\_Admin'. The main content area is white and features the title 'MAAPL Database Portal' and the subtitle 'Search MAAPL Records'. Below this, there are two sections: 'Document Information' and 'Address Information'. The 'Document Information' section includes input fields for 'Book', 'Page', 'Document Number', 'Registry' (with a dropdown menu), and 'Document Type' (with a dropdown menu). The 'Address Information' section includes input fields for 'Street Number', 'Street Name', and 'Town/City'. A purple 'Search Records' button is located at the bottom left of the form area.

Figure 4: Image of the search system on the user interface.

The search function accepts common traits among documents in order to filter through the various sets of data within the database. This makes it easier for the user to do a wide search of all the relevant information, allowing them to be as specific as they need to be. Results appear tabulated by document type on the results page. This process makes it much easier for a user to search and find data quickly. The search feature also utilizes an ‘export to csv’ feature to enable analysis of the data. This feature creates a Comma Separated Value file format (.csv), a common file format that can be easily read by other applications (such as Excel) and used for analysis.

#### *Data Entry*

Normally a user would have to write SQL insert statements to enter items into a database. Likewise, a user would also have to write SQL query statements to retrieve items from a database. We aimed to reduce this complexity by utilizing interactive forms to handle data input and output. These forms do not require any prior knowledge of the SQL language, nor our system on the part of the user. Using these forms, one can easily input data into

the database. One of these forms is pictured below in Figure 5. In this form each of the different fields that can be entered into the database are labeled. For the types of data that require specific entry, like the registry that the document is from, there is a dropdown menu for the selection with multiple choices so a user does not have to worry about specific spelling.

Figure 5: Image from the data entry interface.

### *User Accounts*

The system makes use of an authentication system for user accounts. This feature will allow MAAPL to restrict access to critical aspects of the database to only those who are system administrators. The authentication system also enables MAAPL to create administrator accounts to manage the system. Making use of accounts also means that volunteers must sign in to access any feature on the database, even non-administrator features.

## 4.4 Documentation

This section describes a number of different types of documentation created to help others interact with the database and continue working on it:

- **Annotated foreclosure documents** can help users and system developers by highlighting where pertinent information can be found in the documents requested from registries of deeds
- **The future development guide** explains what parts of the system need to be improved or added
- **The database documentation** details each piece of data stored in the database, along with an explanation of how the database works with the front end
- **User manuals** assist anyone using our system in the current state and for developers interacting with the code directly.

**Annotated Documents**

Based on assistance from Grace Ross, we annotated several foreclosure-related documents. These documents, shown in Appendix F, will assist future users of the database who are manually inputting data into the database from foreclosure documents. Each field of data is highlighted and clearly labelled in each document, so users who are not familiar with foreclosure documents will be able to quickly recognize what needs to be recorded. An excerpt of an annotated Complaint document is shown below in Figure 6, where fields of data such as “case number” are clearly highlighted and labeled. Besides assisting future users, these annotated documents can also be used by MAAPL to help clients read their foreclosure documents, or by future developers to better understand the organization of the database.

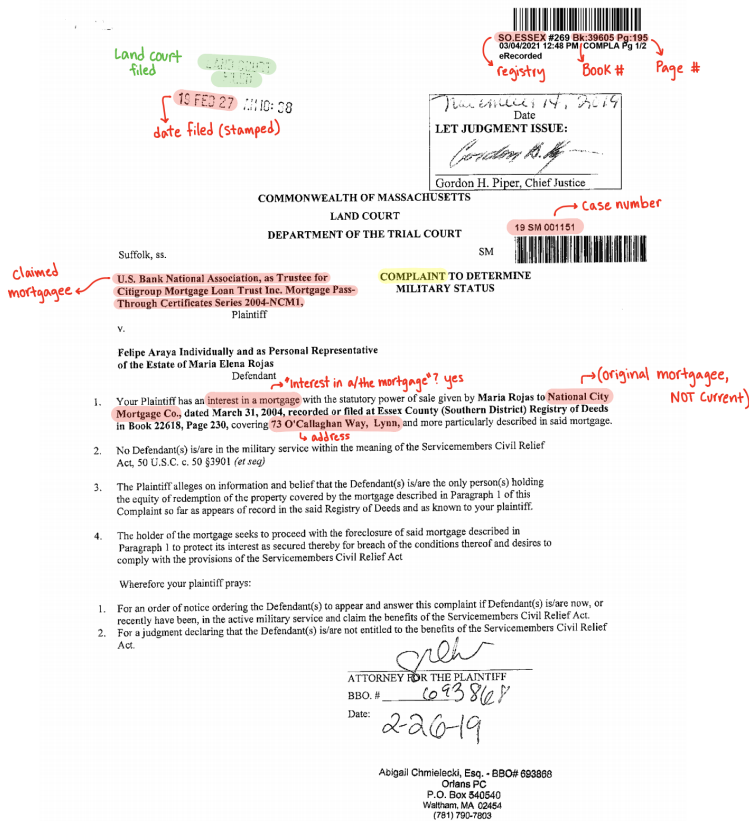

Figure 6: Excerpt from an annotated complaint document.

### *Database Documentation*

This document explains the thought process behind the implementation of the database, and detailed descriptions of the fields in the database. It contains simplified Entity Relationship Diagrams, highlighting specific tables in the database and how they connect. It also documents our assumptions made in the structure of the database. For example, one assumption made in our database is that book, page, and document number combinations are unique to each registry. Therefore, the unique identifier for documents is a combination of book, page, document number, and registry.

### *User Manual*

We created a user manual for MAAPL volunteers to understand how to interact with the data management system. The manual contains a guide explaining all of the features in the front-end user interface, what they do, and how to use them. Instructions include creating an account, searching the database, and entering data into the database.

### *Documented Code*

We are leaving code documentation for future developers as well as learning resources that we utilized in developing the system. This includes documentation not only of our user interface, but the database code and scripts used to populate the database. Full documentation on the code will be available at the Github repository we have used to develop the system.

## 5 Recommendations

We viewed our work as a starting point for many future projects. Therefore, it was important to us to create a comprehensive set of recommendations. This chapter details some of the specific recommendations we have for future developers and MAAPL, varying from technical modifications to the database to data acquisition strategies.

### 5.1 Future Development Guide

We created a Future Development Guide (Appendix B) with recommendations for the further development of the system, which we summarize here:

1. **Data Collection:** Automate data collection either by implementing Optical Character Recognition Software or scraping the websites of registries of deeds.
2. **Front End Updates:** Add functionality to the user interface, such as the ability to delete entries.
3. **Database Updates:** Add more documents, fields, and tables to the database as needed to fill gaps identified by our team and stakeholders.
4. **File System Implementation:** Implement the file hierarchy designed on the permanent server and connect file references to the database.
5. **Security and Account Management:** Ensure that the front end is secure and user accounts have different permission levels that are strongly enforced. This is a prerequisite before the front end can be made public and linked to other features such as a case intake form.
6. **Bug Fixes & Code Refactoring:** Address any major bugs, inefficiencies, or deficiencies in the system. There does not need to be a dedicated effort for this, but future developers should be cognizant of addressing major issues and refactoring the system to improve performance and readability.
7. **Data Cleaning:** Create a process to filter out extraneous data and standardize the format of the indexed data received from the registries of deeds.
8. **Data Entry:** Create more scripts to enter data in bulk from the registries of deeds into the database.
9. **Legal Analysis:** Tangential to the work on the data system itself, we recommend analysis be completed on the needs of legal analysts who will make use of this database. Work should be completed on identifying the legal process, designing an analysis pipeline, and ultimately implementing or finding an appropriate application to serve those needs.

The future development guide was created to provide MAAPL and future developers with suggested tasks to ensure the success and longevity of its new data system. This guide is intended to be read by any person regardless of technical skill or detailed understanding of foreclosure, and will reduce the learning curve for future developers. In addition, it compartmentalizes and organizes all future work into smaller, manageable projects that can operate simultaneously or individually.

## 5.2 Server Recommendations

The database is currently hosted using WPI resources. It is our recommendation that a more permanent server solution be found. From our discussions with key stakeholders and our own analysis, it appears a custom server is the preferred solution.

The first option we considered was the Amazon Web Services: Relational Database Services. The minimum price is \$0.017 per hour which totals out to about \$12.24 per month (Services, 2007). The minimum requirements were deemed appropriate for the database we created, and at first, this seemed like a good option. However, MAAPL wants the database to be stored “in-house” so any form of online computation or storage would not be feasible.

The next possible idea was using a server rack like those found on server farms. This seemed promising as each server in a server rack costs about \$100 to \$250 on Amazon. MAAPL could also add or remove servers as they see fit. The problems with this option are:

1. The server rack would have a lot of parts
2. Ventilation and cooling cost money
3. In-Rack\*, Room Level†, or both types of fire suppression systems may be required (Control Fire Systems, 2018; Robin, 2020).

Due to the long term costs associated with the creation and upkeep of a mounted server rack, as well as the necessity of outside help to set up and calibrate the server rack, we believe that a server rack would not be the best option.

Our recommendation is a custom server. A custom server can be thought of as a very powerful desktop computer with high computing, processing power, and storage without high graphical computation capabilities. Looking at the custom server company Puget Systems, we found that a lower end custom server is about \$1000-\$2000. An extremely high end custom server is about \$4000-\$5000. While this is a much higher cost compared to the other two options, it would be a one time purchase for potentially decades of computing capabilities. As a custom server is just one system, it would require little to no setup and calibration. It would also have lower costs compared to a rack-mount server while remaining physically in-house.

## 5.3 Data Request Recommendations

We recommend any future data requests be made directly to the Secretary of the Commonwealth’s office. Nine of the registries that sent indexed data did so through a contractor through the Secretary of the Commonwealth’s office. A few of the registries who did not send data because of a lack of IT resources suggested contacting the Secretary of the Commonwealth’s office instead. Contacting the Secretary of the Commonwealth’s office directly also presumably makes collecting the data easier as there should be one contact person and a bulk data hand-off.

---

\*fire suppression system within the server rack itself, flooding the rack with fire retardant foam or heat suppressing chemicals if needed

†fire suppression system installed in the same room as a server rack, which uses heat suppressing chemicals

## 6 Conclusions and Potential Impact

As discussed earlier, the foreclosure crisis is a widespread problem with a history rooted in racism. Organizations such as MAAPL try to help homeowners keep their homes and influence policy around lending and foreclosure. Consensus among historians suggests that in the history of policy change, successful movements require advocacy coalitions: grassroots movements of regular people volunteering their time to advocate for a cause (*The Advocacy Coalition Framework*, 2017). No one project, person, nor organization can address the crisis alone. This chapter reframes our work within the context of the foreclosure crisis.

### 6.1 Institutional and Organizational Power Disparities

As we have noted previously, regulations on mortgage lenders are comparatively weaker when compared to regulations on traditional banks. Additionally, the foreclosure process is non-judicial, complex and hard to combat on a case by case basis. To compound this disparity further, the most common victims of predatory lending and foreclosure are primarily Black and Latino people, who are additionally burdened by other systemic problems (Leffall, 2003).

Nonprofit organizations such as MAAPL run on the generosity of their volunteers with little to no backing from large institutions. Therefore, they are only as influential as the sum of their constituents. However, technology can help to facilitate communication and organization within these groups. MAAPL’s data system helps to level the playing field between MAAPL (and its constituent organizations) and the lenders it seeks to combat by expanding the reach and impact of MAAPL’s work.

### 6.2 Expanding the Toolbox

Organizations such as MAAPL are undertaking the lengthy, complicated process of attempting to gain restitution for those affected by the foreclosure crisis. The separate aspects of our project—the front-end, the database, the documentation, and the data collection operations—all aimed to address critical areas for improvement to enhance MAAPL’s organizational mission. Each component of the project was designed to assist MAAPL in a specific dimension of their work. In this section, we will tie our work back to its potential impact for MAAPL.

#### *Centralizing and Democratizing the Data*

In order to prosecute predatory lenders, MAAPL needs to prove in a court of law that some loans were predatory. This requires a significant amount of data and data analysis. Current database systems, web frameworks, and hosting technologies enable storage of the data and easy access for MAAPL’s analysis.

While foreclosure records such as the documents we collected are classified as public information, the process of obtaining this information was complicated, time consuming, and had a variety of positive and negative outcomes. By collecting relevant data from 2004 to the present, we have begun the process of increasing access to this information for MAAPL and other organizations like it. This centralization of information further reduces barriers to making change by removing the metaphorical “middle-man” that is the registry of deeds, enabling MAAPL to directly access and analyze information.

### *Bridging the Gap, Technical to Grassroots Volunteer*

The next crucial area where this work enhances MAAPL's power is in bridging the gap between the complexities of a large data management system and a general user about whom we cannot assume any level of technical experience. Collecting large amounts of foreclosure data within the state is of little use if there is no place to store it. Furthermore, this data is not useful if there is no easy way for anyone to access it. While information can be centralized, it is not democratized if people have no understanding of how to access it.

The user interface and documentation play key roles in breaking down this knowledge barrier which restricts access to essential information. The interface primarily serves the purpose of streamlining access to the wide variety of data we collected in the form of standardized intuitive search and data entry forms. The documentation was created to address any user who would be unfamiliar with these types of interfaces. The user interface and its documentation increase accessibility of the database to the average volunteer at MAAPL. This access increases the capacity of MAAPL volunteers who can use the database to chip away at disparities through data entry and analysis, resulting in more people making a larger overall impact.

### *Protecting and Nurturing the Project Development*

As stated before, grassroots organizing is notoriously difficult and can be very time intensive. The future development guide—contained in Appendix B—provides guidance for further progress on MAAPL's data management system. We designed the future development guide with the intent to assist MAAPL organizers' understanding of the system they are inheriting from our work and how to move forward with it. We hope that this guidance can help MAAPL work towards fully utilizing the database and taking every advantage provided by such a system.

## **6.3 The Long Fight**

As we have stated many times and indicated in our documentation, this work is one component of a larger project which requires many hands to accelerate its development. We have suggested improvements, modifications, and new features to the data system, as well as other efforts that would make use of the database without directly modifying the system. It is our hope that our work enables MAAPL to advance its capabilities in the long fight against predatory lending and illegal foreclosure.

# Appendix A: Registry Data Request Email

**Subject line:** Massachusetts Public Records Request for Research Project

Your Honorable Register [INSERT NAME HERE],

We are a student research team at Worcester Polytechnic Institute (WPI) contacting you to make a formal Massachusetts public records request for our research project. The focus of our research is to establish a data system that will enable analysis of foreclosure data and lending practices in Massachusetts. [Customization]

We are hoping that you can help or refer us to someone who can assist us with our request. We would need the data by the end of April. We are looking for documents relating to individual foreclosures of recorded and registered land, specifically:

- Foreclosure deeds, affidavit of sale, and related advertisements
- Possession (certificate of entry) notices
- Power of Attorney (Certificates of Appointment) related to the above documents
- Mortgage, assignments, and affidavits related to the above documents
- Petitions/Orders of notice or complaints related to the above documents

We would be grateful for this data in whatever form is available. We can provide a physical memory stick or hard drive for the data to be placed onto, or we could arrange to have it transferred via an online storage system (such as Dropbox or Google Drive), if that is preferable.

If you have any further questions or need clarification about this request, please feel free to contact us via phone or email (listed below). Additionally, our project advisors—WPI professors Dr. Rick Vaz, Dr. Chrys Demetry, and Dr. Scott Jiusto—are copied on this email if you want to contact them directly.

Thank you very much,  
WPI Foreclosure Data Team  
Keval Ashara, Sam Gould, Caitlin Kuzma, Patrick O'Mullan

# Appendix B: Future Development Guide

## MAAPL Data System Future Development Guide

Keval Ashara, Sam Gould,  
Caitlin Kuzma, Patrick O'Mullan

### OVERVIEW

This document is a guide to future development of the MAAPL data management system and serves as our primary source of recommendations. It outlines the path forward in development as we see it. We recommend several different projects to further development of the system. In this document, we first provide a brief overview of the topics you will find in the subsequent development guide. The description of the system is current as of May 2021. We describe the state of the system, different areas of potential development, and the recommended skill sets for each area of development.

### CURRENT STATE OF THE SYSTEM (EXCERPT FROM EXECUTIVE SUMMARY)

#### Introduction and Purpose

If one is at all familiar with predatory lending—the practice of lenders taking advantage of borrowers through hidden fees or subprime loan offers—they are likely to associate it with the 2008 financial crisis. In reality, predatory lending has been around for hundreds of years, and is still a major problem in the 21st century. Moreover, predatory lending is difficult to fight because its definition is highly contested and a great deal of evidence is needed to prove its presence. As one might imagine, predatory lending often leads to borrowers falling behind on payments and defaulting on their loans.

Predatory mortgage loans can lead to foreclosure, which is a long, complex, and confusing process. In Massachusetts, the foreclosure process is typically non-judicial, meaning that lenders and other foreclosing mortgagees self-regulate the process outside of the state court system. Although the process mainly relies on the good faith of parties such as banks, there are many documents filed during the process—such as Affidavits—which attempt to prevent illegalities. However, exploitation of the process is still possible, and due to the complex nature of foreclosure, is difficult to address. In Massachusetts, there are 21 different regional registries of deeds where foreclosure documents are filed. Although each registry has a website where documents and data may be accessed, there is no centralized database which enables analysis of this publicly available data.

The Massachusetts Alliance Against Predatory Lending (MAAPL) is one organization that fights predatory lending and illegal foreclosures through activities such as protesting auctions, buying foreclosed homes, and spreading information about the foreclosure process. One of MAAPL's long term goals is to prosecute serial offenders of predatory lending and illegal foreclosure by analyzing Massachusetts foreclosure data. However, it's currently impossible to analyze all of this data because it is spread throughout the state and stored in the registries of deeds.

The goal of this work was to design and implement a user-friendly database for MAAPL to enable aggregation, research, and analysis of Massachusetts foreclosure data. In addition to creating the database, we collected foreclosure data from various Massachusetts registries of deeds. By continuing to collect and centralize this data, MAAPL hopes to perform analysis that will support court cases against serial predatory lenders and address illegal foreclosures in Massachusetts.

#### Methods and Outcomes

To advance MAAPL's work, we pursued the following objectives:

1. Evaluating the current data management system
2. Collecting data from various registries of deeds
3. Implementing changes to the data management system
4. Generating an ongoing plan for the development of the data management system

2021 Keval Ashara, Sam Gould,  
Caitlin Kuzma, Patrick O'Mullan

Before creating the database, we first took a look at the work done by a previous research group in collaboration with MAAPL, which helped to guide the design of our database. We also consulted with some stakeholders to get a sense of how the database will be used, and what MAAPL's long term vision for it is. Also during this time, MAAPL helped us create a list of documents of interest, shown below with their descriptions, to inform the creation of our data request to various registries of deeds and the organization of the database.

1. **Foreclosure Deed:** documents who purchased the home; usually is directly followed by Affidavit of Sale and Advertisement.
2. **Affidavit of Sale and Advertisement:** usually attached to a Foreclosure Deed; proof the lender followed the law requiring a home to be advertised in the local newspaper for three consecutive weeks, and documentation of the auction.
3. **Certificate of Entry and Possession Notice:** certifies that a home has been entered by a bank representative without contest, which means the home is 'foreclosed by entry'.
4. **Power of Attorney:** document that grants one party the power of attorney of the other. In a broad sense, this means that the grantee can sign documents on behalf of the grantor.
5. **Mortgage:** a type of loan, with documentation (the mortgage and the note) created when a person buys a house by borrowing money from a lender; details the terms of how the borrower repays the lender.
6. **Assignment of Mortgage:** documents a transfer of documents, in this case a mortgage and note, between two parties.
7. **Affidavit:** written and signed sworn statement of fact by a party; several different types may be filed during a foreclosure, i.e. swearing that the foreclosing mortgagee possesses the mortgagor's note
8. **Petition, Order of Notice, Complaint:** several types may be filed during a foreclosure; a Notice to Cure starts the foreclosure process by alerting a homeowner they are in default; a Complaint or Order of Notice is filed in Land Court which requests the military status of the defendant.
9. **Pooled Mortgage:** data stored by the Securities and Exchange Commission which contains information about how mortgages are bought and sold as loans.
10. **Tax Assessment Records:** home valuation records stored by town assessor's offices.

These documents can all be connected to predatory lending and foreclosure, because most of them are filed during the foreclosure process. Understanding the intricacies and content of the documents not only helped us acquire data, but also helped inform the structure and fields of the database.

#### **Data Collection**

We sent a public records request to all 21 registries of deeds across Massachusetts. We requested indexed data and documents related to the foreclosure documents listed above from 2004 to the time our request was processed.

In total, we received indexed data from 57% of the registries and documents from 19% of the registries. The two most common reasons given for not providing the data requested were a lack of IT resources, and that the registries' websites would allow us to manually get the data ourselves. However, the websites for the registries of deeds limit downloads to a maximum of 2000 documents at a time, and our requests covered hundreds of thousands of documents in total.

#### **Database**

To store the data from the documents deemed important to the foreclosure process, we created a database. This database, shown in Figure 1, was designed to relate most documents to the mortgage referenced in the document. Each mortgage has an ID comprised of unique identifiers: book, page, document number, and registry. Since each foreclosure case is associated with a mortgage, this unique ID for mortgages can be used as the ID of the foreclosure. This system allows for multiple foreclosures at the same address, as there are instances of that happening in the data we received.

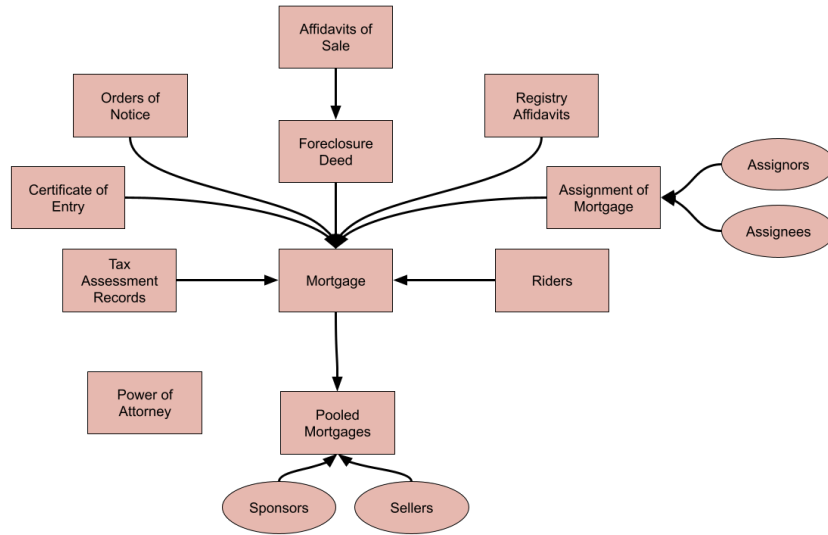

Figure 1: Simplified Entity Relationship Diagram (ERD)

**File System**

In order to tie the indexed foreclosure information to the corresponding pdf documents, a file access hierarchy was designed so that individuals searching the database can directly access the relevant files relating to a foreclosure. A file system, depicted in Figure 2, was chosen instead of utilizing MySQL's pdf storage feature to ensure higher system performance.

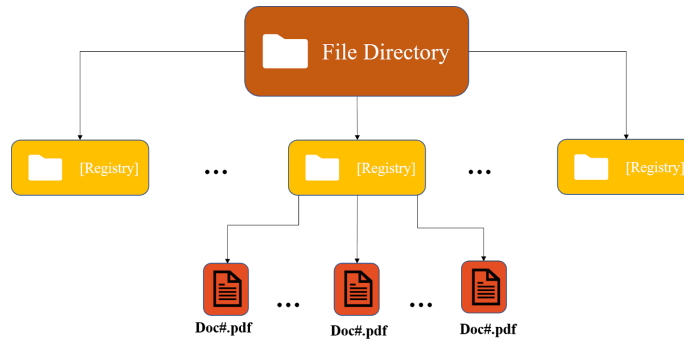

Figure 2: Proposed File access hierarchy for document access through the database.

**User Interface**

A user interface was created to serve as a "portal" to the database and can be connected to a remote server where data is stored. Included in this interface is a form for searching the database based on certain fields of interest and a form for entering data into the database. Additionally, first steps were taken in implementing an automated data entry system for bulk file uploads. These features minimize the required technical knowledge of an individual using the data system and streamlines the frequent processes one might use the database for. The "portal" also contains a feature to export data from the database into a Comma Separated Value file format (.csv) for analysts to use in their research.

Figure 3: Image of the search system on the user interface.

### PROJECT AREA: DATA COLLECTION

There are many gaps in the data acquired as of writing this guide. In total, 12 registries of deeds sent indexed data in CSV's and only four registries of deeds supplied the associated document images. Out of the four registries that sent the document images, only two associated the images to the indexed data. The indexed data also does not contain all data points of interest. Additionally, data about securitized trusts and pooled mortgages from the Securities and Exchange Commission (SEC) and assessed values of homes from town assessor's offices is missing from the database. A dedicated effort to adding data to the database would enable better analysis of the foreclosure data. There are many avenues to pursue to collect more data for the database.

**Recommended Skills:** Varying skills are needed depending on approach. For OCR and web scraping, developers will need technical skills. However, when collecting data from other sources, there is more flexibility in methods.

## Areas for Work

### Implement Optical Character Recognition

#### Motivation

Pulling the data directly from the document images can lead to much more detailed database entries. There is an abundance of data that is on each document of interest to MAAPL that is not indexed, such as handwritten notes. This could also be used to associate document images to the indexed data in the database.

#### Information

Steve Florida is working on implementing Textract to input data into the database. Future developers will have to decide if they would rather use the Textract key-value interface or full raw text. Either way, this also involves translating the Textract output into SQL insert statements to add data to the database.

**Implement Web-Scraping to Pull Data and Documents From the Registry Websites****Motivation**

Many registries did not send our team data, with the response that the data we are looking for is on their websites. Manually pulling the data of interest was deemed too time consuming.

**Information**

The registries of deeds have websites where the public can search for and view many documents stored at the registry of deeds. Most registries do not charge for this. Creating a web-scraping script would enable the collection of indexed data and document images from registries that did not provide them. This could also be used to get documents that are not currently in the database. Document images could be used for manual entry, or could be put through OCR software as described in the previous project.

**Collect Data From Other Data Sources****Motivation**

As of May 2021, the database contains data that was indexed by the registries of deeds. Data from the SEC and town assessor's offices is also important for analysis. Additional data from the registries of deeds from where our team's data ended to present for future developers would also be of use.

**Information**

Future developers should make data requests from the various sources identified. They should make use of the Freedom of Information Act, as the data we are interested in is public information. In our References section is a good guide to public records law in Massachusetts by Secretary of the Commonwealth William Galvin

(<https://www.sec.state.ma.us/pre/prepdf/guide.pdf>).

**PROJECT AREA: TECHNICAL FRONT-END IMPROVEMENTS**

The data system has a user interface that allows users to input data to the database, search data, and export data, but it has many limits. As of May 2021, there is no ability to update or delete existing records in the database. There are other limits to the functionality of the system that should be addressed. Adding more functionality would enable further and more varied use of the database. This project involves adding functions or aspects to the user interface that were identified as good future additions.

**Recommended Skills:** experience with HTML, CSS, JavaScript, Python, and the Django Framework.

**Areas for Work****Address Missing Functionality in the Interface****Motivation**

There are identified missing functionalities in the front-end interface that need to be addressed in future work.

**Information**

The missing functionalities include:

- Ability to edit entries
- Ability to review manual data entry before submitting
- Ability to delete entries
- Ability to only grab selected entries for csv download
- Ability to connect documents together
  1. Reference mortgages by looking up a mortgage from any document
  2. Reference foreclosure deed from affidavit of sale or vice versa
- Ability to view all assignors & assignees from an assignment
- Ability to view all sellers & sponsors from a pooled mortgage

**Add New Aspects to the Interface****Motivation**

Part of MAAPL's goal for this system is to open it to the public allowing searches of state-wide foreclosure data as well as assisting victims of predatory lending and foreclosure with their case intake form.

**Information**

- Integration of MAAPL's case intake form
  - \* This may require implementing or finishing MAAPL's case intake form. This would involve creating relations in the database to associate the case entry form to other data in the database.
- Creating public website and connecting to database
  - \* This requires cyber-security improvements, because the system as it stands is not ready to be public-facing.

- Connect the files to the database application This requires the file system holding the document images to be implemented.
- \* Each document in the database has a field called “FileName” that can be used to store the location of the file in MAAPL’s storage system. Two functions could be added to the user interface to connect the file system:
  1. Create the ability to view the pdf from the user interface search results. This could be by clicking on the “FileName” field or having a “view file” button that opens the pdf.
  2. Create the ability that when the “download” button is pressed, the user can also download a .zip file containing all the documents that are in the .csv file.

**PROJECT AREA: USABILITY IMPROVEMENTS TO USER INTERFACE**

We initially intended to run user trials on our system. However, the scope of the project became too large. As a result, we had to try to construct an interface that would allow input and searches, but we were unable to obtain any constructive feedback.

**Recommended Skills:** experience with HTML, CSS, JavaScript, Python, and the Django Framework.

**User Study to Revise User Interface****Motivation**

The system needs to be as easy as possible for several key stakeholders: MAAPL volunteers, who are uploading the data either manually or in bulk; legal analysts, who will be searching for data and extracting it; and (eventually) victims of predatory lending looking to obtain resources to fight foreclosure.

**Information**

1. Conduct user studies on the existing interface
  - We recommend getting MAAPL volunteers from a variety of backgrounds, such as some potential legal analysts and volunteers who might do data entry. We also recommend a combination of think-alouds and surveys. The think-alouds can provide in-depth information, but usually are run with about 5 volunteers. Surveys can be applied more broadly, but rarely give detailed feedback.
2. Note difficulties users have and feedback from user studies
3. Make quality of life improvements based on user feedback as well as our following suggestions:
  - Make the first tabulated table appear automatically
  - Find a different way to navigate the tabs instead of a scrolling bar, having two becomes confusing
  - Add a search bar for key words in the data search.

**PROJECT AREA: DATABASE UPDATES**

The data system has a database that can store foreclosure data. Different shortcomings and missing information in the database have been identified, but we were unable to address this due to time restrictions.

**Recommended Skills:** We recommend experience in Structured Query Language (SQL). In particular, experience in MySQL is preferred, but it is likely that knowledge of other SQL languages will be transferable.

**Address Missing Database Information****Motivation**

The following is a list of all identified missing pieces of the database, whether that be documents, specific fields, or tables to relate different entities. In addition to adding the following pieces, the database could be optimized, and more constraints and triggers could be added, such as a trigger that updates other tables when an entry is deleted.

**Information**

- Missing Documents
  - \* Other types of Assignments may be of interest to add to the database, i.e. Assignment of Bid, Conditional Assignment of Leases and Rents (which is attached to the mortgage)
- Missing Fields
  - \* General fields that apply to multiple tables
    - Every time an authority document is referenced, the registry should also be recorded. We made the assumption that the authority document would be in the same registry as the document where it is referenced, but we discovered this is not true of all authority documents, adding authority document fields to lots of things. There may also be multiple authority documents referenced in a given document (see below).
    - Document ID
      1. This would make it easier to reference other documents in the future. This would also give every document an ID, which would standardize the documents.
  - \* Foreclosure Deed
    - Mortgagors
    - Original mortgagee
    - Current mortgagee
  - \* Affidavit of Sale
    - Buyer
    - Assignment data in advertisement
  - \* Power of Attorney
    - Authority document
  - \* Registry Affidavit
    - Mortgagee
    - Title of affiant
  - \* Tax Assessment
    - Address
  - \* Assignment of Mortgage
    - Signer organization/employer

- Missing Tables

- \* Comment Table

- MAAPL suggested every document should have a comments section, our idea to implement this is to store a comments table that stores the ID or book, page, document number, registry of the document along with comments. This way there's not a large field that is usually empty in every document.

- \* Authority Document Table

- Add the ability to have multiple authority documents

**PROJECT AREA: INTEGRATING THE FILE SYSTEM**

Implement the file hierarchy designed on the permanent server and connect file references to the database. There are two main parts to this file system. First, all document images should be in the same format. We have chosen pdfs.

**Recommended Skills:** A general understanding of file systems in modern computers. This area of work would pair well with "Technical Front-End Improvements". We recommend this area is completed tangentially with another project area.

**Create the file system**

- Convert all document images to pdfs
  - Many documents received from the registries of deeds were in the ".tiff" file format. Many files were also named in such a way that they couldn't be opened by many computers (for example 0078.001.tiff was read as a ".001" file format by Windows computers, which is not an image format). We created a script to get rid of the periods from file names, and compile all images of a document into a single pdf when possible.
- Implement the file structure as intended
  - We created a draft of the file structure for MAAPL's use. This structure should be implemented on MAAPL's server so that the documents are standardized and in the same place.

**PROJECT AREA: SECURITY AND ACCOUNT MANAGEMENT**

There will need to be a more dedicated effort into ensuring the front end is secure. This involves making sure that user account generation is restricted to users that have approval from MAAPI, user accounts have different permission levels that are strongly enforced, and generally improving the system's security so that the application can be public facing. This is a prerequisite before the front-end can be made public and linked to other features such as a case intake form.

**Recommended Skills:** Previous experience in computer networks, cyber-security, server systems, Python and the Django Framework are highly recommended for this project.

**Some different ways we believe accounts can be restricted**

- Secure the account system
  - Some different ways we believe accounts can be restricted:
    1. Two-factor authentication
    2. Restrict to valid MAAPL emails
      - \* This means only allowing people to create accounts with emails through MAAPL's email system. Additionally, people should have to confirm their account through an email to that email address.
    3. Restrict the ability to add new accounts to system admins
- Restrict certain actions to certain types of accounts
  - Different ideas for restrictions
    - \* Public accounts are allowed to search and download, but not edit the database in any way
    - \* Restrict deletion to higher-level accounts
- Generally secure the system before making the system public

**PROJECT AREA: BUG FIXES AND CODE REFACTORING**

Time should be taken by future developers to address any major bugs, inefficiencies, or deficiencies in the system. There need not be a dedicated effort for this, but future developers should be cognizant of addressing major issues and refactoring the system to improve performance and readability.

**Recommended Skills:** General computer science experience, especially in Python or other object-oriented languages, the Django Framework, and to a lesser extent HTML, CSS, and JavaScript are recommended.

**Areas for Work**

- Refactor the code
  - There is a lot of repetition between different classes and objects. Applying object-oriented techniques of abstraction and inheritance would reduce repetition. This is a good idea because making a change in repeated code has to be repeated in every place the code repeats.
- Refactor queries to make code more readable and more efficient
- Identify, document, and attempt to fix any bugs encountered during development

**PROJECT AREA: DATA CLEANING**

Create a process to filter out extraneous data and standardize the format of the indexed data received from the registries of deeds. Many registries gave extraneous data, such as death certificates, that our database does not hold. Cleaning the data provided by the registries can make data entry simpler.

**Recommended Skills:** Experience with a scripting language such as Python.

**Suggested filtering and cleaning**

- Delete or otherwise filter out unneeded document types
  - Many registries have slightly different ways of labeling the documents. Additionally, there may be typos in the document labels, so be sure to account for those
- Locate and delete apostrophes or other problematic symbols if needed
- Delete or otherwise filter out documents that do not have enough identifying information
  - Some foreclosure documents do not have enough data to put into the database. For example, some foreclosure deeds don't have an address listed.
- Delete or otherwise filter out repeated entries
  - Usually due to typos, sometimes a registry will have multiple entries for the same document. For example, there were two entries for a foreclosure deed, one had the full address and one was missing the street number. Another example is sometimes there are typos for different parties involved. One mortgage had two entries because each entry had a slightly different spelling of the mortgagor's last name.

**PROJECT AREA: DATA ENTRY**

Create more scripts to bulk enter data from the registries of deeds into the database. We created scripts to convert the indexed data from the Worcester Registry of Deeds into SQL insert statements. There is one script for each type of document in the database. These scripts can be used as a basis to create scripts to enter data from registries.

**Recommended Skills:** Experience with a scripting language such as Python.

**Areas for Work**

**Limits of Current Script**

- Power of attorney has just the first grantor and grantee since the script exploded exponentially
- Assignments might label more than just assignment of mortgage, all go to assignment
- Complaints might label more than the complaints we care about, all are inserted into our complaint/order of notice table

**Edit the scripts to pull data from a different format**

- Must account for the different column names

**PROJECT AREA: LEGAL ANALYSIS**

The overarching goal of creating the data management system is to enable legal analysis. To conduct legal analysis, first the needs of legal analysts should be identified. This effort also involves research into the legal process of prosecuting illegal foreclosure. The goal is to create an analysis pipeline of the data, whether that is through creating an application or analysis process.

**Recommended Skills:** Good research skills, communication skills, and documentation skills are highly recommended for this project.

**Build an Application Based on Pipeline Established in Previous Avenue**

**Recommended Skills:** Coding experience, especially in building applications

Predicted workflow of application

1. Takes exported csv from user interface as input
2. Runs analysis on the data
  - We expect designing this analysis will require input from legal analysts, along with research
3. Flag important statistics
4. Display information in graphics and tables
  - Some ideas of graphics to display:
    - \* Integrate with GIS to show the suspicious cases on a map, with different demographic information
    - \* Statistics deemed important to legal analysis

**Develop an Analysis Pipeline for Legal Experts**

- Evaluate legal needs from stakeholders
- Design a pipeline for analysis to be constructed
  - This could be instructions explaining how to run the analysis, an Excel function that receives data and does calculations, or any other format deemed appropriate
- Create a recommended future development guide for an application or refinement of the pipeline

# Appendix C: User Guide

## Contents

<b>Purpose and Scope of this Guide</b>	<b>1</b>
<b>1 Users</b>	<b>3</b>
1.1 Accounts & Registration . . . . .	3
1.2 Profile Page . . . . .	6
<b>2 Searches</b>	<b>8</b>
2.1 The Search Form . . . . .	8
2.1.1 Extra Fields involved with Mortgage . . . . .	10

2.2.1 Filtering Searches . . . . .	12
2.2.2 Exporting Data to CSV File Format . . . . .	13
<b>3 Data Entry</b>	<b>15</b>
3.1 The Data Entry Form . . . . .	15

## Purpose and Scope of this Guide

This guide is designed to introduce the novel MAAPL data system at a level that can be easily understood by a user of any technical background. Since this guide will not go into heavy technical detail, it will almost entirely focus on the user interface and its features. Volunteers should reference this guide when they encounter any confusion while trying to make use of the system.

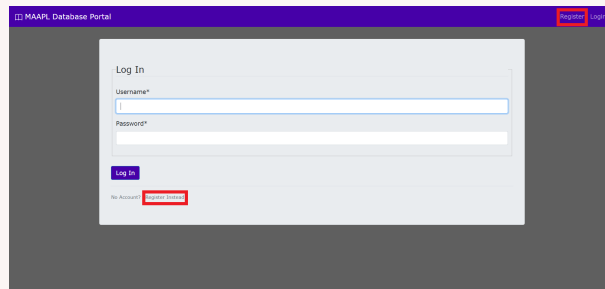

# 1 Users

## 1.1 Accounts & Registration

The MAAPL database portal requires a user to have an account in order to query data from and input data to the database. When first accessing the portal, users will be prompted to log-in. New users should click register to create their accounts. All accounts are linked to a profile where a user can customize and update their information <sup>1</sup>. We will discuss the profile page in more detail later. Below are instructions for creating an account with the MAAPL database portal.

### Registering for a MAAPL Account

Step 1: Navigate to the MAAPL database portal. You should be prompted to log in immediately. You should select one of the two options prompting you to register pictured below.

<sup>1</sup>This was included for the purpose of potentially creating a forum for MAAPL volunteers and staff to update one another on information.

Step 2: Once you have navigated to the registration page, you will be prompted to enter a username, an email, a password, and to confirm that password. All fields are required for creating an account. An example of the register page is depicted below.

**If your information is invalid, the form will indicate to you what information is incorrect so you do not have to guess.**

MAAPL Database Portal Register Login

Register Volunteer Account

Username\*

MAAPL\_Volunteer

Required: 100 characters or fewer. Letters, digits and @/./\_/-/! only.

Email\*

MAAPL\_Volunteer@MAAPL.org

Password\*

\*\*\*\*\*

- Your password can't be too similar to your other personal information.
- Your password must contain at least 8 characters.
- Your password can't be a commonly used password.
- Your password can't be entirely numeric.

Password confirmation\*

\*\*\*\*\*

Enter the same password as before, for verification.

Register

Step 3: Upon successful registration, you will be redirected to the log-in page with a notification that you have successfully registered. At this point you can log-in with your new account information.

MAAPL Database Portal Register Login

MAAPL\_Volunteer has registered with the portal!

Log In

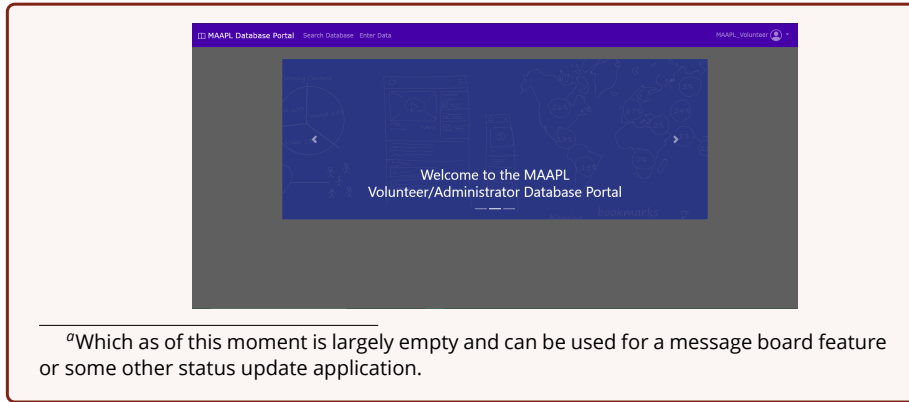

Username\*

Password\*

Log In

No Account? Register Instead

Step 4: Once logged in you should be redirected to the landing page <sup>a</sup> From this point you are registered with the portal and have the ability to log-in/log-out, alter your profile and account settings, search the database, and enter new data.

---

## 1.2 Profile Page

---

This section will familiarize the user with the aspects of the user profile.

### What is The User Profile?

The user profile is a feature attached to each user's account that provides them a page where they can customize several fields.

- Profile Picture
- Username
- Email

**As of this time there is no option for a user to alter their password. The MAAPL IT will need to establish a password recovery system email. It is unclear if this feature will be complete by the time a user reads this manual.**

### User Profile Form

MAAPL\_Volunteer  
MAAPL\_Volunteer@maapl.org

Profile Information

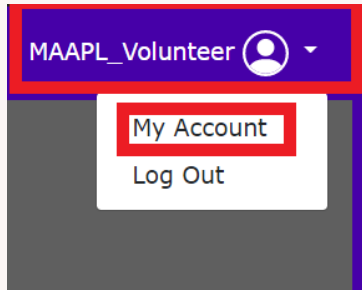

Username\*  
MAAPL\_Volunteer  
Required. 150 characters or fewer. Letters, digits and @/./+/-/\_ only.

Email\*  
MAAPL\_Volunteer@maapl.org

Image\*  
Currently: default.jpg  
Change:  
 No file chosen

### Accessing the Profile Page

Step 1: Observe the top right corner of the website on the navigation bar that displays your username. Click on this and a dropdown menu will appear. Select the "My Account" option.

Step 2: From here you will arrive at your personal profile page. Refer to the diagram below in order to understand the layout and fields.

## 2 Searches

### 2.1 The Search Form

---

This section will familiarize the user with the search function. The search form enables users of the MAAPL portal to search and filter specific information located inside the database.

#### What Can I Search?

Users can search the following documents currently available in the database.

- Foreclosure Deed
- Affidavit of Sale and Advertisement
- Certificate of Entry and Possession Notice
- Power of Attorney
- Mortgage and Mortgage Riders
- Assignment of Mortgage
- Affidavit
- Petition, Order of Notice, Complaint
- Pooled Mortgage
- Tax Assessment Records

**Search Form**

**MAAPL Database Portal**  
Search MAAPL Records

**Document Information**

Book Page Document Number Registry Document Type

**Address Information**

Street Number Street Name Town/City

Search Records

### Finding and Using the Search Form

Step 1: Look at the navigation bar, Next to the "MAAPL Database Portal" title, there is an option to search the database, select that option.

Step 2: Once you have navigated to the search page, you should see the search form pictured above in the "Search Form" figure. Below you will see a list of all fields followed by an explanation.

- Book Number (TEXT FIELD): The book number of interest.
- Page Number (TEXT FIELD): The page number of interest.
- Document Number (TEXT FIELD): The number of the document of interest.
- Registry (DROP-DOWN MENU): The registry the data came from.
- Document Type (DROP-DOWN MENU): The type of foreclosure-related document.

- Street Number (TEXT FIELD): The street number for a foreclosed building.
- Street Name (TEXT FIELD): The street name for locations of foreclosures.
- Town/City (TEXT FIELD): The town or city the user wants to search documents in.

**If any of these terms are unclear to you, please refer to the annotated documents for clarification.**

### 2.1.1 Extra Fields Involved with Mortgage

The system also has specialized fields that appear when searching for a mortgage specifically. In order to access these fields, a user needs to select the Mortgage document from the "Document Type" dropdown. After this is selected, a new set of fields will appear.

#### Mortgage Search Form

The screenshot shows the MAAPL Database Portal search interface. At the top, it says "MAAPL Database Portal" and "Search MAAPL Records". Below this, there are two main sections: "Document Information" and "Address Information".

**Document Information:** This section contains fields for "Book", "Page", "Document Number", "Registry", and "Document Type". The "Document Type" dropdown menu is currently set to "Mortgage".

**Address Information:** This section contains fields for "Street Number", "Street Name", and "Town/City". Below these are three dropdown menus: "Start Date Year(Range)" (with a range slider), "FHA?", "Checkboxes?", and "Paragraph C?".

**Mortgagor and Lender:** At the bottom, there are four sets of input fields for names. The first two are for "Mortgagor" and "Mortgagor (Second)", each with "First Name", "Last Name", and "MI" fields. The last two are for "Mortgagee" and "Lender", each with "First Name", "Last Name/Compan", and "MI" fields.

A "Search Records" button is located at the bottom left of the form area.

---

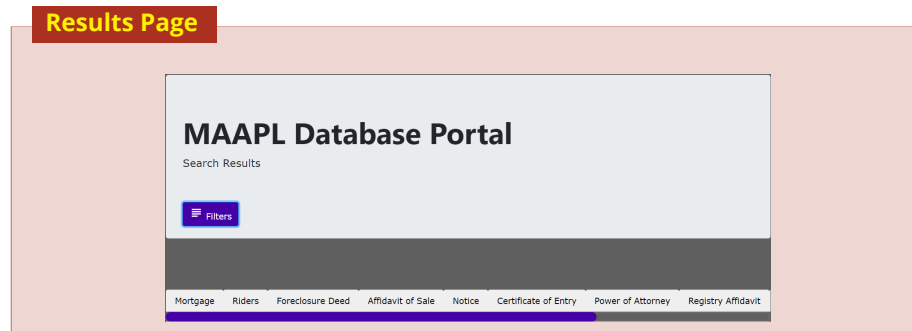

The additional fields included in the expanded search form for mortgages are:

- Mortgage Start Year (RANGE SLIDER): Starting year of the mortgage.
- FHA? (DROP-DOWN Y/N): Has federal housing assistance loan.
- Checkboxes? (DROP-DOWN Y/N): If there are checkboxes checked off on the mortgage (usually indicating riders).
- Paragraph C? (DROP-DOWN Y/N): Indicates if MERS is the Mortgagee.
- Mortgagor (3-TEXT FIELD): Name (First, M.I., Last) of the mortgagor.
- Mortgagor (Second) (3-TEXT FIELD): Name (First, M.I., Last) of the second mortgagor.
- Mortgagee (3-TEXT FIELD): Name (First, M.I., Last/Company Name) of the mortgagee. Sometimes an individual is the mortgagee and other times it is an institution or company, in the second case, only provide the company name in the last-name field (leaving the first and middle initial fields blank).
- Lender (3-TEXT FIELD): Name (First, M.I., Last/Company Name) of the mortgagee. Sometimes an individual is the lender and other times it is an institution or company, in the second case, only provide the company name in the last-name field (leaving the first and middle initial fields blank).

**If any of these terms are unclear to you, please refer to the annotated documents for clarification.**

## 2.2 The Results Page

This section will familiarize the user with the results page. The results page is displayed immediately after a search. It contains a list of tabulated results separated by document type. Users can select the filter button to further refine their search. Each table also has an export to csv option for extracting data from the database.

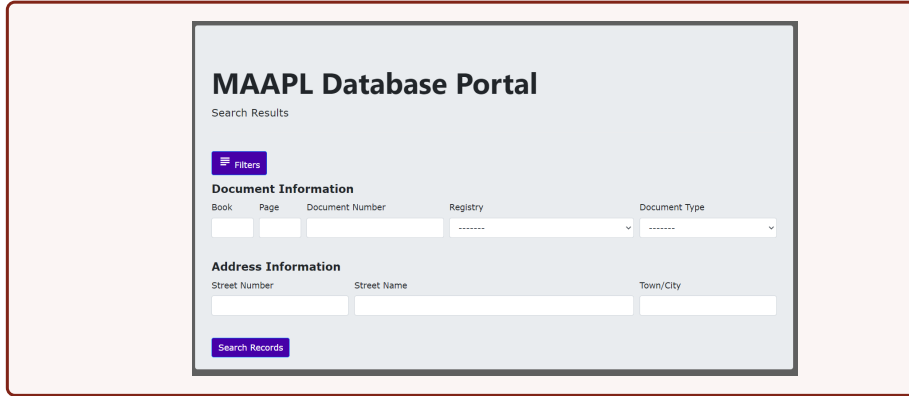

### 2.2.1 Filtering Searches

Searches can be filtered by selecting the "Filter" button located on the results page. Once selected the search filters will appear with your previous search filters, allowing you to modify your search further.

### Filtering a Search

Step 1: Select the "Filter" button pictured below.

Step 2: Notice the menu drop down, select fields as you normally would in a regular search and click search.

### 2.2.2 Exporting Data to CSV File Format

Once a user has narrowed down their results to their liking, they are able to export their results into a comma separated value (CSV) document<sup>1</sup> for further analysis. As of this version of the interface, results can only be downloaded by document type. So a download must be initiated for each document of interest.

**Exporting Data to a CSV**

Step 1: From the results page, select a document tab of interest.

Step 2: Once a tab is selected and the results for that document type appear, scroll down to the bottom of the page until you encounter the download button, seen below.

<sup>1</sup>This is a commonly used document in data analysis as there are many tools build for it.

Step 3: Once you find the button and select it, a new tab will be opened to generate a download request, once the request is completed the tab will close and the download will begin. The example below uses the Chrome web browser. You should see a similar result for all modern browsers such as Safari, Firefox, Microsoft Edge, and Chrome.

0-0-102120- Worcester South	0	0	102120	700	OLD UNION TPK	LANCASTER	Worcester South	Oct. 30, 2014	—
0-0-102187- Worcester South	0	0	102187	61	BROOKDALE CIR	SHREWSBURY	Worcester South	Oct. 30, 2014	—
0-0-102368- Worcester South	0	0	102368	33	WHITE CT	CLINTON	Worcester South	Aug. 27, 2012	—
0-0-102423- Worcester South	0	0	102423	84-90	FRONT ST	WINCHENDON	Worcester South	Oct. 30, 2014	—

Step 4: You should be able to repeat this for any document type you are interested in by simply selecting another tab (Step 1) and repeating the process.

## 3 Data Entry

### 3.1 The Data Entry Form

---

As it stands, the only ways to enter data into the database for volunteers is manually by looking at documents and typing in the relevant information<sup>1</sup>.

#### What Can I Enter to the Database?

Users can enter manually any of the following documents into the database.

- Foreclosure Deed
- Affidavit of Sale and Advertisement
- Certificate of Entry and Possession Notice
- Power of Attorney
- Mortgage (with corresponding Riders)
- Assignment of Mortgage
- Affidavit
- Petition, Order of Notice, Complaint
- Pooled Mortgage
- Tax Assessment Records

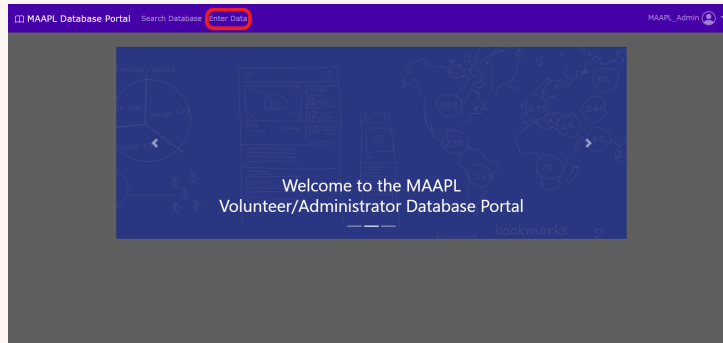

---

<sup>1</sup>Currently there is limited capacity to bulk upload entries to the database using scripts, however this has not yet been developed enough to implement in the front end for users.

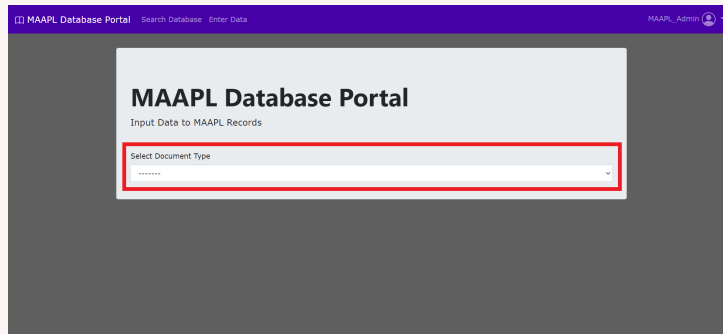

### Finding and Using the Enter Data Form

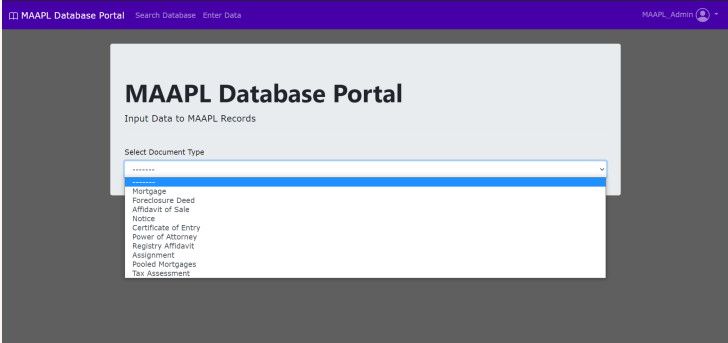

Step 1: From the Home page (or any page) select "Enter Data" on the navigation bar.

Step 2: Here you should arrive at the data entry page, which should by default look as pictured below. Observe the, initially blank, dropdown menu.

Step 3: Select the dropdown menu, a list of document types for entry should appear. Select one and a form with various fields should pop up. You may select the document of interest for data entry.

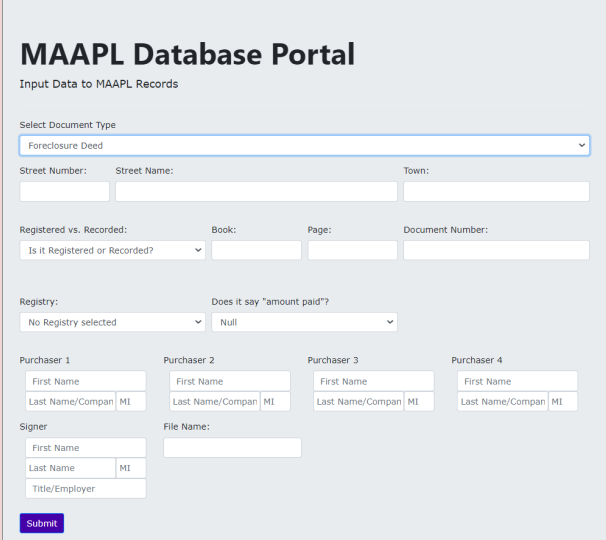

**MAAPL Database Portal**  
Input Data to MAAPL Records

Select Document Type

- Mortgage
- Foreclosure Deed
- Affidavit of Sale
- Notice
- Certificate of Entry
- Power of Attorney
- Registry Affidavit
- Assignment
- Pooled Mortgages
- Tax Assessment

**Refer to the annotated documents to understand the various fields and where to find them in the pdf files.**

**An Example: Foreclosure Entry Form**

**MAAPL Database Portal**  
Input Data to MAAPL Records

Select Document Type  
Foreclosure Deed

Street Number:  Street Name:  Town:

Registered vs. Recorded: Book: Page: Document Number:  
Is it Registered or Recorded?

Registry: Does it say "amount paid"?  
No Registry selected  Null

Purchaser 1: First Name  Last Name/Compan MI   
Purchaser 2: First Name  Last Name/Compan MI   
Purchaser 3: First Name  Last Name/Compan MI

2021

# Appendix D: Database Explanation

## Database Explanation

### Overview

This document explains the structure of the database created for a 2021 research project at WPI in coordination with MAAPL. The database was created using MySQL. The code is an appendix in the same report as this document. The code that generates the insert statements to the database is also an appendix in that report. In this document, we will first discuss our assumptions, then we will describe the structure in relation to the documents that contain the relevant information.

The database was designed to have the mortgage deed table be the central table to relate documents. We assume that each foreclosure is related to one mortgage, and that each mortgage has one foreclosure associated with it. We make this assumption because we assume that a foreclosure ends in three ways: the homeowner renegotiates the mortgage, the homeowner catches up on payments, or the foreclosure process ends with the house being sold. If the homeowner renegotiates the mortgage, a new mortgage document will be entered into the registry of deeds. If a homeowner catches up on payments, it should mean there are not duplicate documents from the same time period. If a foreclosure process ends with the house being sold, then there is a new mortgage associated with the property. We cannot assume that the address is enough to distinguish mortgages since there are cases in which there are more than one foreclosure at a property in the timeframe our database covers.

We chose to store names as one string because according to the indexing standards of Massachusetts, registries are to store the names of parties as last name or company, first name, and middle initial. Many registries index this data as one field. We decided our database would store the names as one field. Some registries store first name, middle initial, and last name, but other registries store them in the format "last name, first name middle initial". Since it is simpler to format the separate names into one field, we decided to store our names as one field.

Figure 1 shows the simplified entity-relationship diagram (ERD). We created a simplified ERD and this document because the database structure is too complex to show in an ERD as the previous research team created (McCarthy et. al, 2020). The arrows represent foreign key references. The tables that are referenced by other tables have IDs, all calculated as follows: "book-page-document number-registry". This was the simplest way to store the foreign key references in other tables. The arrow points from the table referencing the foreign key to the table containing the field referenced.

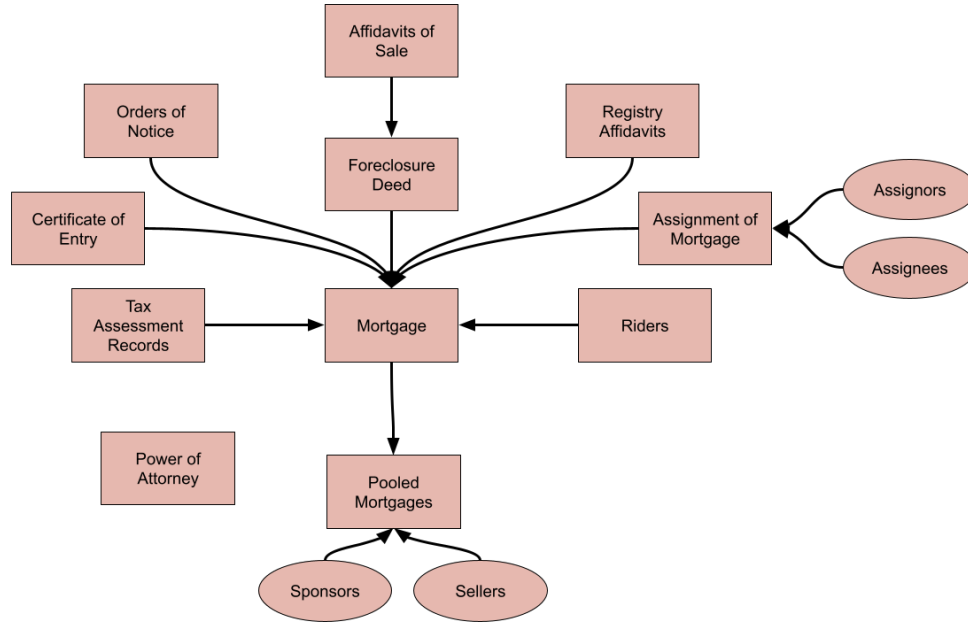

Figure 1: Simplified Entity-Relationship Diagram

As shown in the diagram, most tables are not referenced by other tables. That means that section of the database can be changed without affecting the rest of the database. For example, the Notice table only references the Mortgage table and nothing references the Notice table. That means it can be easily changed without changing the rest of the database. We decided on this structure not only because foreclosures can be identified by mortgages, but also so that pieces of the database that we did not fill could be updated by future groups.

We decided to keep track of the registries and not just the towns because it would be useful to sort by registry to see if there are any patterns in the data received by registry. Not every registry indexes all the same data. For example, Duker provided images of all files. They indexed the file names of the images along with the rest of the data provided. However, Middlesex North did not provide images of the data, so the file names for Middlesex North are blank.

The affidavit of sale is usually in the same pdf as the foreclosure deed. We decided to separate them into two different tables because they are two different forms included in the same packet. Additionally, the affidavits of sale had the most data points out of any of the tables

in the database. The advertisements of the auction are included in the affidavit of sale because the advertisements did not contain enough relevant information to warrant a separate table.

There are also tables for assignors, assignees, sellers, and sponsors as shown in Figure 1. These tables exist because there is a variable number of assignors and assignees in each assignment, and a variable number of sellers and sponsors in each pooled mortgages document. Since these relationships can be classified as a many-to-one relationship, these relationships have tables that contain the name of the assignor, assignee, seller, or sponsor, and the primary key of the associated table.

Feedback from our sponsors has revealed shortcomings of the database. For example, authority documents. Some documents have two authority documents, but the database only has space for one authority document per affidavit or assignment of mortgage document. Additionally, we made the assumption that the authority document would be in the same registry as the document referencing it. We have since found examples of documents where the authority document is recorded in a different registry. A field for the registry of the authority document should be added in the future to account for this.

Another improvement to the database our sponsors expressed interest in was adding a comments field to every table. We believe it makes more sense to have a “comments” table that stores the ID of a document and the comments associated with the document. This way, there is not a large character field on every table that is largely kept blank.

## Legend

Mortgage ID	Any fields highlighted in this color refer to the ID of a mortgage, both in the mortgage table and as a reference to a mortgage from a different table
Pool ID	Any fields highlighted in this color refer to the ID of a pooled mortgages document, both in the pooled mortgage table and as a reference to a pooled mortgage from a different table (sellers to pool and sponsors to pool)
Assignment ID	Any fields highlighted in this color refer to the ID of an assignment, both in the assignment table and as a reference to an assignment from a different table (assignee to assign and assignor to assign)
Foreclosure Deed ID	Any fields highlighted in this color refer to the ID of a foreclosure deed, both in the foreclosure deed table and as a reference to a foreclosure from the affidavit of sale table

## Mortgage

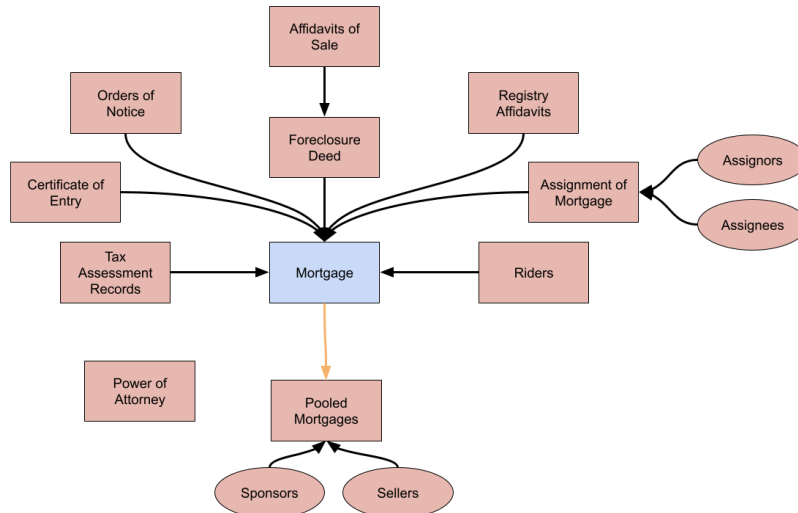

Figure 2: Simplified ERD highlighting Mortgage

- **Mortgage Table Fields**
  - ID - character string
    - Primary key, calculated from book and page or document number, registry
    - Book and page or recorded, document number for registered
    - We calculate this so less repeated information stored in other tables
  - PoolID - character string
    - ID from pooled mortgages
  - Book - integer
    - Book number from the registry
  - Page - integer
    - Page number from the registry
  - DocNum - integer
    - Document number from the registry
  - StreetNum - character string
    - (in case it's unit x or 12b or something along those lines)
  - StreetName - character string
    - "Main St Apt 20" part of the address
  - Town - character string
    - Town part of the address
  - Registry - character string
    - Registry the document is from

- StartDate - date
  - Start date of the mortgage
  - Date signed
- MatureDate - date
  - Date the mortgage must be paid back by
- Borrower1 - character string
  - Format: last first middle
  - This is the format that the registries store the data
- Borrower2 - character string
  - Format: last first middle
- Mortgagee - character string
  - Usually for MERS
  - Format: last first mi
- Lender - character string
  - The bank that is involved in the mortgage
  - Format: last first mi
- LenderDescription - character string
  - I.e. ““Lender” is a California **Corporation** organized and existing under the laws of **California**” -> important info is category (corporation) and state (california)
- Amount - decimal number
  - Amount the mortgage is for
- MIN - character string
  - Character string because there's dashes in it
  - MIN number associated with mortgage, MERS
- FHAbox - character flag
  - This is a y/n/NULL
  - “is there an FHA box under “mortgage” line?”
- OtherMortgage
  - ID of the other mortgage
  - second mortgage with the same origination date
  - This is a foreign key reference to a different mortgage
- ParaC
  - This is a y/n/NULL
  - “is there a paragraph c?”
- Sus
  - This is a y/n/NULL
  - A flag for whether or not a mortgage is suspicious as laid out in a document Grace Ross provided
  - NULL means assessment/analysis has yet to be run
- Checkboxes
  - This is a y/n/NULL
  - “are any of the checkboxes on the second page checked off?”
  - Checkboxes indicate different riders which may apply to the mortgage

- Comments
  - Handwritten notes on document
- Standard - character
  - This is a y/n/NULL
  - Y if 'Fannie Mae/Freddie Mac UNIFORM INSTRUMENT' on the bottom/in footnote
- FileName - character string
  - Name of the file(s) that contain the images of the document
- RegVRec - int
  - 0 for registered
  - 1 for recorded

## Mortgage Riders

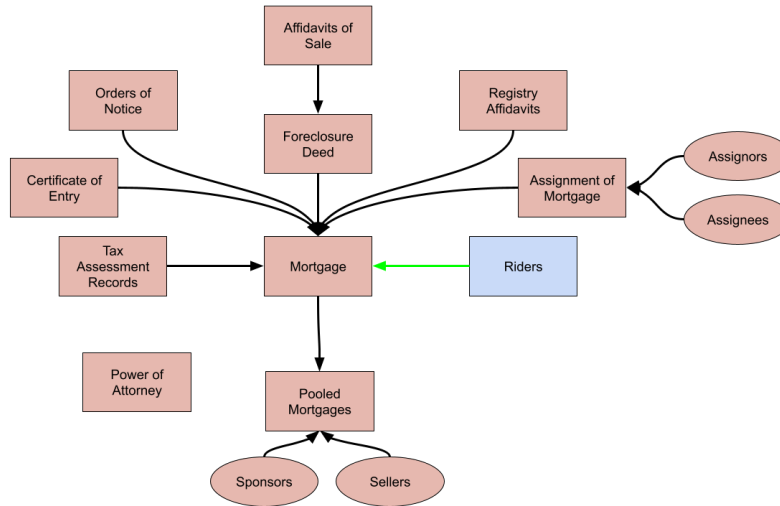

Figure 3: Simplified ERD highlighting Mortgage Riders

- **Riders Table Fields**
  - **MortID - character string**
    - Part of primary key
    - Primary key of the mortgage that the rider is associated with
  - Title - character string
    - Part of primary key
  - Amount - decimal amount
    - Amount of payment in case of balloon rider
    - Amount of pre-pay penalty in case of adjustable rider
  - ChangeFreq - decimal amount
    - In case of adjustable rate
    - Frequency of percent change
    - Unit: months
  - StartRate - decimal amount
    - In case of adjustable rate
    - Starting interest rate
    - Stored as 1.5 if percent is 1.5%
  - SecondRate - decimal amount
    - In case of adjustable rate
    - Max interest rate
    - Stored as 1.5 if percent is 1.5%

- InitChangeRate - decimal amount
  - In case of adjustable rate
  - Initial change rate
  - Stored as 1.5 if percent is 1.5%
- InitChangeDate - date
  - In case of adjustable rate
  - Date of the first change in rate
- InterestOnly - character
  - y/n/NULL
  - "Interest only option?"
- PickAPay - character
  - y/n/NULL
  - If yes for interest only, is there a pick-a-pay option?
- NegAmor - character
  - y/n/NULL
  - Negative Amortization?

## Home Valuation Data

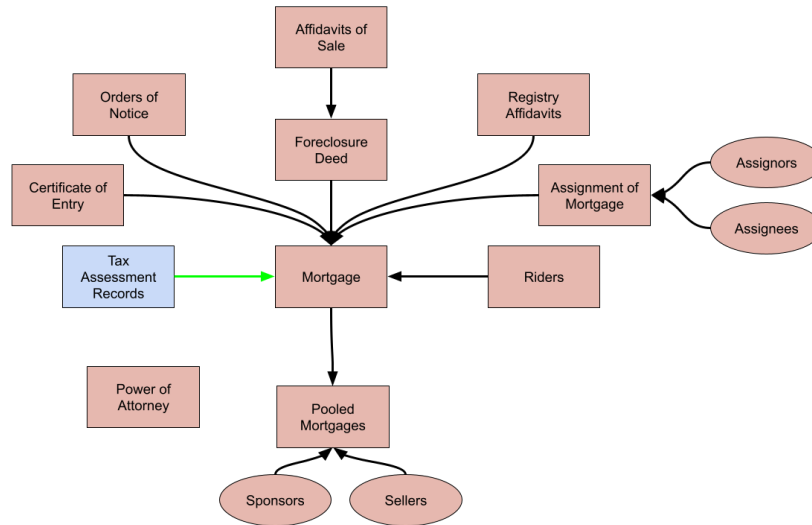

Figure 4: Simplified ERD highlighting Tax Assessment Records

- TaxAssessment Table Fields
  - MortID - character string
    - Primary key
    - ID of associated mortgage
  - Year1Prev - integer
    - 1 year pre mortgage date, ie. 2008
  - Year1PrevVal - decimal amount
    - Value of house one year prior
  - Year2Prev - integer
    - 2 years prior to mortgage
  - Year2PrevVal - decimal amount
    - Value of the house one year prior
  - Year3Prev - integer
    - 3 years prior to the mortgage
  - Year3PrevVal - decimal amount
    - Value of the house 3 years prior

## Power Of Attorney

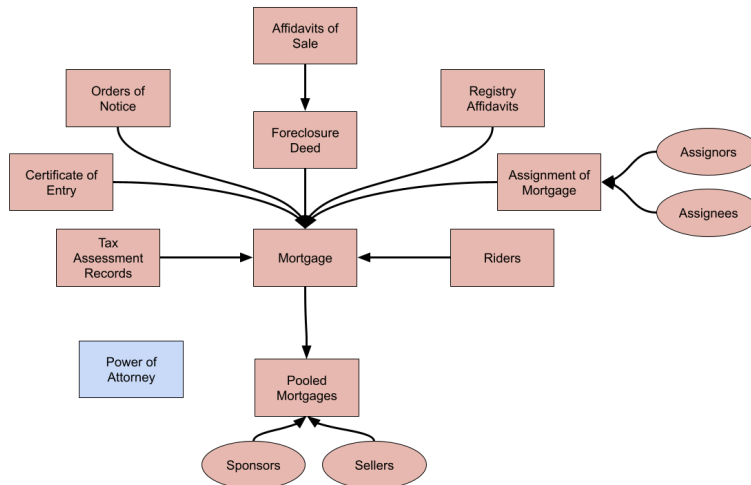

Figure 5: Simplified ERD highlighting Power of Attorney

- PowerOfAttorney
  - DateOfSig - date
    - Part of primary key
  - GrantorOfPoA - character string
    - Part of primary key
    - Format: last first middle if person, otherwise company name
    - First grantor listed
  - GrantorTitle - character string
    - Title of the grantor
  - IndividWPoA - character string
    - "Individual with Power of Attorney"
    - Part of primary key
    - Format: last first middle if person, otherwise company name
    - First grantee listed
  - NumGrantor - integer
    - Number of grantors on doc
  - NumGrantee - integer
    - Number of grantees on doc
  - LocaleOfSig - character string
    - Address it was signed in relation to
    - Should probably split into different pieces
  - FileName - character string
    - Name of the file(s) that contain the images of the document

## Pooled Mortgage

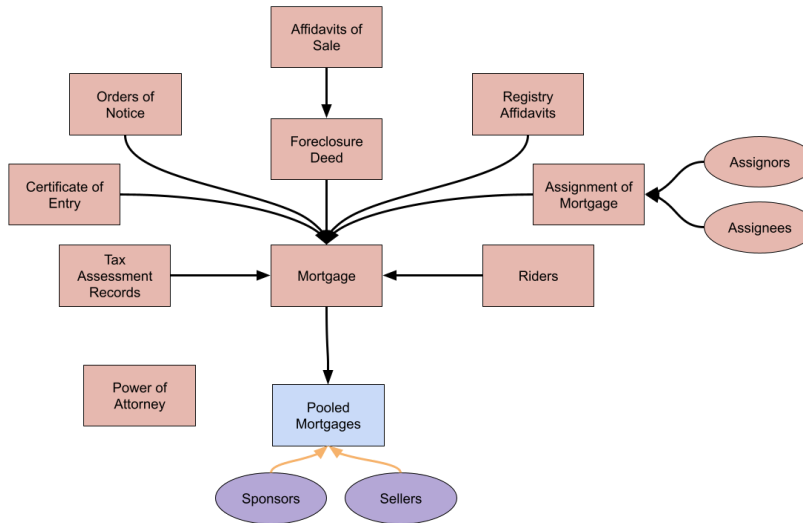

Figure 6: Simplified ERD highlighting Pooled Mortgages

- **PooledMortgages**
  - ID - character string
    - Unique generated ID
    - Primary key
  - StartDate - date
    - Start date of the document
  - CloseDate - date
    - Closing date of the document
  - GovState - character string
    - Governing law state
  - Trustee - character string
    - Name of the trustee
    - Format: last first mi
  - SubDate - date
    - Substitution date
    - When they set up a pool they are supposed to get the mortgages in between the cut off date and the closing date. However, they are allowed an amount of substitution mortgages that they can substitute for a mortgage that's in there. A lot will have a date (usually 24 months later) where after that date they can't make any more substitutions

- MasterServicer - character string
  - Name of the master servicer
  - Format: last first mi
- Lender - character string
  - Name of lender
  - Format: last first mi
- Depositor - character string
  - Name of depositor
  - Format: last first mi
- DeposWarranty - character flag
  - This is a y/n/NULL
  - “depositor warranty?”
- ReqNoteEndorse - character flag
  - This is a y/n/NULL
  - “required for note endorsement?”
- DeposStateReg - character flag
  - This is a y/n/NULL
  - “must depositor be registered in the state of the mortgage?”
- SusWording - character flag
  - This is a y/n/NULL
  - Mentions “predatory”, “subprime”, “high cost”, or “hoepa”?
  
- SellersToPool
  - PoolID - character string
    - ID from pooled mortgages
    - Part of Primary Key
  - SellerName - character string
    - Format: last first middle
    - Part of Primary Key
  
- SponsorsToPool
  - PoolID - character string
    - ID from pooled mortgages
    - Part of Primary Key
  - SponsorName - character string
    - Format: last first middle
    - Part of Primary Key

## Assignment of Mortgage

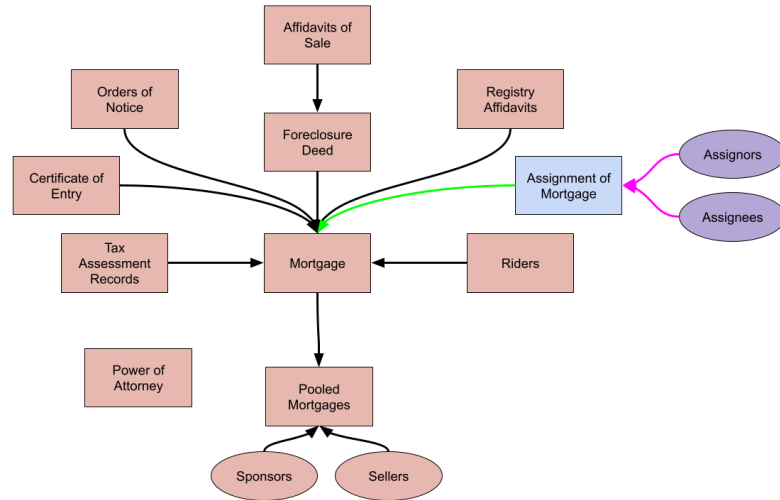

Figure 7: Simplified ERD highlighting Assignment

- **Assignment of Mortgage**
  - ID - character string
    - Primary key
    - Calculated from book, page, document number, registry
    - Format: book-page-docnum-registry
  - MortID - character string
    - ID of mortgage that the foreclosure involves
  - Book - integer
    - Book number from registry
  - Page - integer
    - Page number from registry
  - DocNum - integer
    - Document Number from registry
  - Registry - integer
    - Registry where this data is stored
  - SignerName - character string
    - Name of the person that signed the assignment
    - Format: last first mi
  - SignerTitle - character string
    - Title of the signer

- SignerAttInFact - character
  - This is a y/n/NULL
  - “is signer attorney in fact?”
- EntityNom - character string
  - MERS as “entity nominee for” \_\_\_\_\_
- Note - character
  - This is a y/n/NULL
  - Was it assigned with the note?
- ForValue - character
  - This is a y/n/NULL
  - “for value or for consideration?”
- Value - dec
  - The amount of the “for value” value
- MarkedConfirm - character
  - This is a y/n/NULL
  - “marked confirmatory?”
- Beneficiary - character string
  - Party named beneficiary of assignment
  - Format: last first mi
- NotaryName - character string
  - Name of the notary
  - Format: last first mi
- NotaryCounty - character string
  - County of notarization
- NotaryState - character string
  - State of notarization
- DateSigned - date
  - Date that the assignment was signed
- AssignMortgage- character
  - This is a y/n/NULL
  - “assigning the mortgage?”
- BenInterest - character
  - This is a y/n/NULL
  - “all beneficial interest?”
- AuthBook - integer
  - Book number of the authority document
- AuthPage - integer
  - Page number of the authority document
- AuthDocNum - integer
  - Document Number of the authority document
- FileName - character string
  - Name of the file(s) that contain the images of the document

- RegVRec - int
  - 0 for registered
  - 1 for recorded
  
- AssigneeToAssign
  - ID - character string
    - Assignment ID
    - Part of Primary Key
  - Assignee - character string
    - Name of assignee
    - Format: last first mi
    - Part of Primary Key
  
- AssignorToAssign
  - ID - character string
    - Assignment ID
    - Part of Primary Key
  - Assignor - character string
    - Name of assignor
    - Format: last first mi
    - Part of Primary Key

## Registry Affidavits

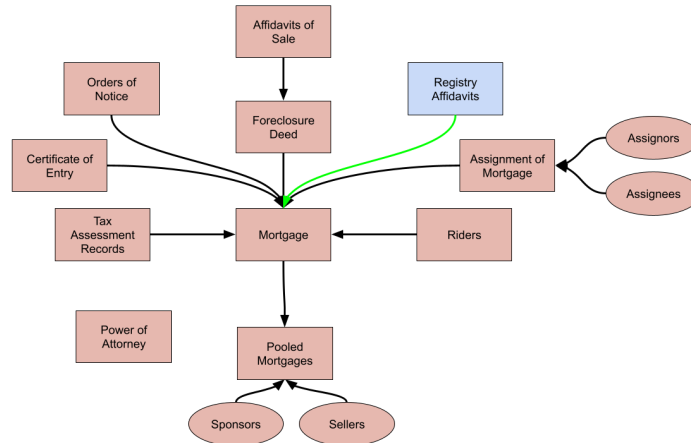

Figure 8: Simplified ERD highlighting Registry Affidavits

- **RegAffidavit**
  - **MortID - character string**
    - ID of mortgage that the foreclosure involves
  - Book - integer
    - Part of primary key
    - Book number from registry
  - Page - integer
    - Part of primary key
    - Page number from registry
  - DocNum - integer
    - Part of primary key
    - Document number from registry
  - Reg - character sting
    - Part of primary key
    - Registry
  - StreetNum - character string
    - Character string to account for cases like “12b”
  - StreetName - character string
    - “Main St Apt 2” portion of address
  - Town - character string
    - Town portion of address
  - NotaryName - character string
    - Format: last first mi
  - NotaryCounty - character string
    - County of notarization

- NotaryState - character string
  - State of notarization
- AffiantName - character string
  - Format: last first mi
- AffiantOrg - character string
  - Organization the affiant is apart of
  - Is this a bank representative? For what bank?
- AuthBook - integer
  - Book number of the authority document
- AuthPage - integer
  - Page number of the authority document
- AuthDocNum - integer
  - Document Number of the authority document
- Follow35B - character
  - This is a y/n/NULL
  - Is affiant swearing to compliance with Mass General Laws Chapter 244 Section 35B? -> Claims loan offered?
- Follow35C - character
  - This is a y/n/NULL
  - Is affiant swearing to compliance with Mass General Laws Chapter 244 Section 35C?" -> Mortgagee claims note?
- MortgageeNote - character
  - This is a y/n/NULL
  - "Is the affiant swearing that mortgagee holds the note?"
- OrigNote - character
  - This is a y/n/NULL
  - "is the affiant swearing to see the original note?"
- OrgServicer - character
  - This is a y/n/NULL
  - "is the affiant organization the servicer?"
- PersonalKnowledge - character string
  - Personal knowledge entered by anyone in MAAPL
- LawyerCert - character
  - y/n/NULL
  - Whether or not a lawyer certified this
- Type - character string
  - Type of registry affidavit
  - eaton/pinti/35B
- FileName - character string
  - Name of the file(s) that contain the images of the document
- RegVRec - int
  - 0 for registered
  - 1 for recorded

## Foreclosure Deed

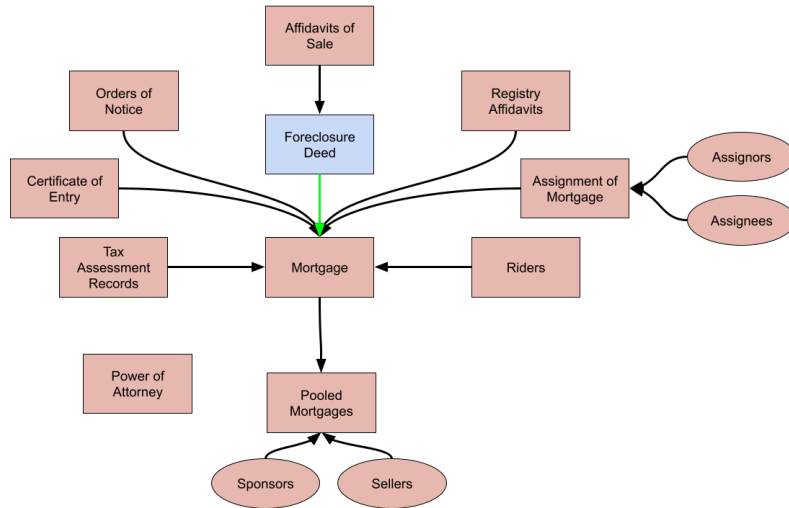

Figure 9: Simplified ERD highlighting Foreclosure Deed

- **ForeclosureDeed**
  - ID - character string
    - Primary key
    - calculated from book, page, document number, registry
  - MortID - character string
    - ID of associated mortgage
  - Book - integer
    - Book number from registry
  - Page - integer
    - Page number from registry
  - DocNum - integer
    - Document Number from registry
  - Registry - character string
    - Registry where this data is stored
  - StreetNum - character string
    - Character string to account for cases like “12b”
  - StreetName - character string
    - “Main St Apt 2” portion of address
  - Town - character string
    - Town portion of address

- Lender - character string
  - The current holder of the mortgage/seller associated with the foreclosure, typically the lender
- SignerName - character string
  - Format: last first mi
- SignerTitle - character string
  - Title of the signer, such as attorney or vice president
  - Also includes the organization of the signer
- Paid - character
  - This is y/n/NULL
  - Does it say “amount paid”?
- Purchaser1 - character string
  - Name of purchaser
  - Format: last first mi
- Purchaser2 - character string
  - Name of purchaser
  - Format: last first mi
- Purchaser3 - character string
  - Name of purchaser
  - Format: last first mi
- Purchaser4 - character string
  - Name of purchaser
  - Format: last first mi
- FileName - character string
  - Name of the file(s) that contain the images of the document
- RegVRec - int
  - 0 for registered
  - 1 for recorded

## Affidavit of Sale

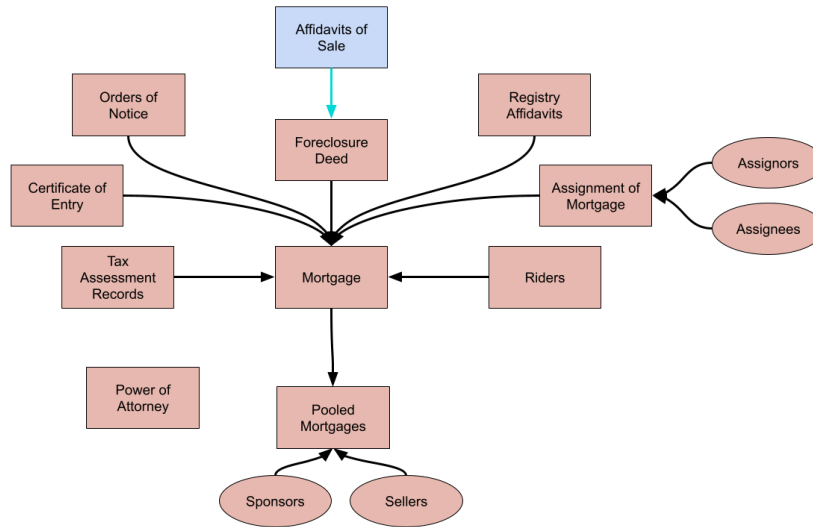

Figure 10: Simplified ERD highlighting Affidavits of Sale

- AffidavitOfSale
  - DeedID - character string
    - ID from foreclosure deed
    - Part of primary key
  - Book - integer
    - Book number from registry
    - Part of primary key
  - Page - integer
    - Page number from registry
    - Part of primary key
  - DocNum - integer
    - Document Number from registry
    - Part of primary key
  - Registry - character string
    - Registry where this data is stored
    - Part of primary key
  - StreetNum - character string
    - Character string to account for cases like “12b”
  - StreetName - character string
    - “Main St Apt 2” portion of address

- Town - character string
  - Town portion of address
- AuctioneerName - character string
  - Format: last first mi
  - Name of the auctioneer
- AuctioneerLicense - character string
  - License number of the auctioneer
- AuctionDate - date
  - Date of the auction
- AffiantName - character string
  - Format: last first mi
  - Name of affiant, person signing the document
- AffiantLawFirm - character string
  - Law firm of the affiant, person signing the document
- DateSigned - date
  - Date the affiant signed the document
- ForecloseLawFirm - character string
  - Law firm foreclosing the property
- Consideration - decimal number
  - Amount the property sold for
- MortgageeOnRec - character string
  - Mortgagee on record
  - Format: last first mi
- NotaryName - character string
  - Format: last first mi
  - Name of notary
- NotaryCounty - character string
  - County of notarization
- NotaryState - character string
  - Abbreviation (ie MA,NH)
- OriginalMortgagee - character string
  - Original mortgagee
  - Format: last first mi
- HighBid - character
  - This is a y/n/NULL
  - Whether or not the purchaser was the highest bidder
- Postponements - integer
  - Number of times the auction was postponed
- FirstAdDate - date
  - First advertisement date
- NewspaperName - character string
  - Name of the newspaper the advertisements were in
- NumMentions - integer
  - number of times “assigned” is mentioned in ad

- AuthBook - integer
  - Book number of the authority document
- AuthPage - integer
  - Page number of the authority document
- AuthDocNum - integer
  - Document Number of the authority document

## Orders of Notice, Petitions, Complaints

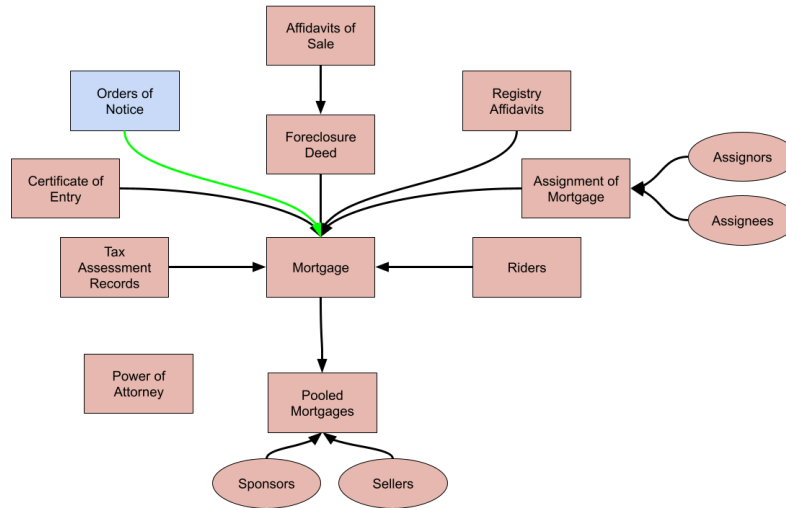

Figure 11: Simplified ERD highlighting Orders of Notice

- Notice
  - MortID - character string
    - ID from associated mortgage
  - Book - integer
    - Book number from the registry
    - Part of primary key
  - Page - integer
    - Page number from the registry
    - Part of primary key
  - DocNum - integer
    - Document number from the registry
    - Part of primary key
  - Registry - character string
    - Registry document is from
    - Part of primary key
  - StreetNum - character string
    - Character string to account for cases like “12b”
  - StreetName - character string
    - “Main St Apt 2” portion of address
  - Town - character string
    - Town portion of address

- DateEntered - date
  - Date entered into the registry
- CaseNum - character string
  - Number of the case in land court, i.e. "19 SM 001151" (may only be present on complaints)
- InterestInMort - character
  - This is a y/n/NULL
  - "does it say interest in the mortgage?"
- ClaimedMortgagee - character string
  - Mortgagee on the mortgage (person or company)
  - Format: last first mi

## Purpose

While the main purpose of these documents is to inform MAAPL database users manually entering data from foreclosure documents, these documents may also be helpful to MAAPL IT volunteers and database developers, or people currently going through the foreclosure process.

The documents are annotated with the following colors:

- Red: highlights and annotates data of interest for data entry (or other purposes)
- Yellow: highlights document titles
- Green: indicates additional notes, such as language that may suggest a certain section of interest or data point
- Blue: indicates the word “assigned” in advertisements
- Orange: indicates assignor/assignee pairs in advertisements

**Disclaimer:** These documents were not annotated by nor have been reviewed by an attorney. These documents do not contain legal advice, and are for informational purposes only.

## Annotated Documents with Additional Notes

Following is a collection of one example of each of the following types of foreclosure document: Complaint, Power of Attorney, Certificate of Appointment (Power of Attorney), Affidavit, Certificate of Entry, Assignment of Mortgage, Foreclosure Deed, Affidavit of Sale, Advertisement, and a Mortgage with riders.

While these documents are unrelated, they are ordered the way that a registry of deeds may receive them in. Additionally, these documents are fairly standard examples of the types of foreclosure documents located in each registry of deeds. However, there are many different versions of these documents, so the green highlight provides extra information about where to find data of interest. For example, while the Book Number of a document is not always located in the top right corner of a document, it can be found easily by looking for “Bk:”.

Case number

claimed mortgagee

Suffolk, ss.

SM

U.S. Bank National Association, as Trustee for  
Citigroup Mortgage Loan Trust Inc. Mortgage Pass-  
Through Certificates Series 2004-NCM1,  
Plaintiff

COMPLAINT TO DETERMINE  
MILITARY STATUS

v.

Felipe Araya Individually and as Personal Representative  
of the Estate of Maria Elena Rojas  
Defendant

\*Interest in a/the mortgage? yes

(original mortgagee,  
NOT current)

- Your Plaintiff has an interest in a mortgage with the statutory power of sale given by Maria Rojas to National City Mortgage Co., dated March 31, 2004, recorded or filed at Essex County (Southern District) Registry of Deeds in Book 22618, Page 230, covering 73 O'Callaghan Way, Lynn, and more particularly described in said mortgage.  
↳ address
- No Defendant(s) is/are in the military service within the meaning of the Servicemembers Civil Relief Act, 50 U.S.C. c. 50 §3901 (*et seq*)
- The Plaintiff alleges on information and belief that the Defendant(s) is/are the only person(s) holding the equity of redemption of the property covered by the mortgage described in Paragraph 1 of this Complaint so far as appears of record in the said Registry of Deeds and as known to your plaintiff.
- The holder of the mortgage seeks to proceed with the foreclosure of said mortgage described in Paragraph 1 to protect its interest as secured thereby for breach of the conditions thereof and desires to comply with the provisions of the Servicemembers Civil Relief Act

Wherefore your plaintiff prays:

- For an order of notice ordering the Defendant(s) to appear and answer this complaint if Defendant(s) is/are now, or recently have been, in the active military service and claim the benefits of the Servicemembers Civil Relief Act.
- For a judgment declaring that the Defendant(s) is/are not entitled to the benefits of the Servicemembers Civil Relief Act.

Power of Attorney

POWER OF ATTORNEY

grantor 1

grantee 1

KNOW ALL MEN BY THESE PRESENTS, that U.S. Bank National Association, as Trustee for Citigroup Mortgage Loan Trust Inc. Mortgage Pass-Through Certificates Series 2004-NCM1, with an address of c/o PHH Mortgage Corporation successor by merger to Ocwen Loan Servicing, LLC 1661 Worthington Road, Suite 100, West Palm Beach, FL 33409 does hereby constitute and appoint Orleans PC, with an address of PO Box 540540, Waltham, MA 02454, and each of its officers, directors, employees, agents and/or assigns, its true and lawful attorney-in-fact for it and in its name, place and stead, (the "Law Firm") (1) to take any and all steps which are customary and reasonably necessary to the commencement and completion of judicial and nonjudicial foreclosure proceedings, including making peaceable and unopposed entry on the premises described in the mortgage, for the purposes of foreclosing the mortgage, bidding on its behalf at the foreclosure sale and executing a Memorandum of Sale in connection therewith; (2) to make, execute, acknowledge and deliver all contracts, orders, assignments of bid, foreclosure deed(s) and affidavit(s), proofs of claim and court pleadings; (3) to convey the property described in such mortgage, including executing, acknowledging and delivering the deed and any other instrument or document customary and reasonably necessary to accomplish such conveyance and (4) to make, execute, acknowledge and deliver any other certificates, writings, assurances and other instruments, including receiving and endorsing any checks on its behalf which may be required in connection with any of the foregoing.

The rights, powers and authority of said attorney-in-fact herein granted shall commence and be in full force and effect as the date hereof until the filing at the Registry District of the Land Court or the recording with the Registry of Deeds in which the Power of Attorney is filed or recorded as applicable of a revocation of authority under this Power of Attorney relative to the Law Firm, while hereby ratifying and confirming any and all of the enumerated actions herein, taken by the Law Firm prior to the date hereof. Any party dealing in good faith with the Law Firm shall be entitled to rely upon a photostatic copy of this instrument and upon the statement or certificate of the Law Firm that this Power of Attorney is still in force and effect, has not been revoked and that the party acting hereunder as an officer, director, employee, agent or assignee of the Law Firm has been duly authorized by the undersigned and by the Law Firm. No party dealing with the Law Firm shall be required to look to the application of anything paid or transferred to it nor shall any person dealing with the Law Firm be required to determine the existence of any facts justifying the exercise by the Law Firm of the authority granted pursuant hereto.

AFFIDAVIT PURSUANT TO M.G.L. Ch. 244, §§ 35B and 35C

Property Address: 42 Kinnicut Road aka Kinnicut Road, Worcester, MA 01602

Mortgage: Nancy Aharon-Georgevich and Thomas Georgevich to Mortgage Electronic Registration Systems, Inc. as nominee for, People's Choice Home Loan, Inc., its successors and assigns, dated May 4, 2006 recorded at Worcester County Registry of Deeds in Book 38912, Page 1 on May 5, 2006.

The mortgage was assigned to U.S. Bank National Association, as trustee for Structured Asset Securities Corporation Mortgage Pass-Through Certificates, Series 2006-BC2 on May 17, 2012 by assignment recorded at Worcester County Registry of Deeds in Book 49004, Page 366 on May 22, 2012.

Foreclosing Mortgage: U.S. Bank National Association, as trustee for Structured Asset Securities Corporation Mortgage Pass-Through Certificates, Series 2006-BC2

The undersigned, Kishia Givens under oath deposes and says as follows:

Property Address: 42 Kinnicut Road aka Kinnicut Road, Worcester, MA 01602

1. I am an officer of Wells Fargo Bank, N.A. ("Wells Fargo"), where I hold the office of Vice President Loan Documentation. Wells Fargo is a duly authorized agent for U.S. Bank National Association, as trustee for Structured Asset Securities Corporation Mortgage Pass-Through Certificates, Series 2006-BC2 and the loan servicer for the mortgage referenced above.

Personal Knowledge? talk to an advocate before answering

2. In the regular performance of my job functions, I am familiar with business records maintained by Wells Fargo for the purpose of servicing mortgage loans. These records (which include data compilations, electronically imaged documents and others) are made at or near the time by, or from information provided by, persons with knowledge of the activity and transactions reflected in such records, and are kept in the course of business activity conducted regularly by Wells Fargo. It is the regular practice of Wells Fargo mortgage servicing business to make these records. As a result of my review of the business records, I have acquired personal knowledge of the matters stated herein.

3. Based upon my review of the business records of Wells Fargo, I certify that:

- a. [X] Wells Fargo complied with MGL Ch. 244 § 35B. -> claims loan offered? yes (claims ch 34B complied with?)
[ ] MGL Ch.244 § 35B is not applicable to the above mortgage. Wells Fargo did not send notice pursuant to MGL Ch. 244 § 35B because notice was sent to the borrower pursuant to MGL Ch. 244 § 35A prior to August 3, 2012.
[ ] M.G.L.ch.244, § 35B is not applicable because the loan is not a "certain mortgage loan" as the property securing the mortgage debt is not occupied by the obligor.

- b. On this date, U.S. Bank National Association, as trustee for Structured Asset Securities Corporation Mortgage Pass-Through Certificates, Series 2006-BC2 is the holder of the promissory note secured by the above mortgage. -> mortgage claims note? yes
[ ] the authorized agent of the holder of said promissory note for purposes of, amongst other things, foreclosing said mortgage on behalf of said note holder. (associated with MGL Ch. 244 § 35C)

Signed under the pains and penalties of perjury this 13th day of December, 2016.

#### DEFINITIONS

Words used in multiple sections of this document are defined below and other words are defined in Sections 3, 11, 13, 18, 20 and 21. Certain rules regarding the usage of words used in this document are also provided in Section 16.

(A) "Security Instrument" means this document, which is dated AUGUST 8, 2006, together with all Riders to this document. *date of the mortgage document = start date*

(B) "Borrower" is TERRI A. MAYES-KING AND ALTON KING, JR., WIFE AND HUSBAND  
*mortgagor(s) mortgagor 1 mortgagor 2*

Paragraph C/  
 MERS Borrower is the mortgagor under this Security Instrument.  
 (C) "MERS" is Mortgage Electronic Registration Systems, Inc. MERS is a separate corporation that is acting solely as a nominee for Lender and Lender's successors and assigns. MERS is the mortgagee under this Security Instrument. MERS is organized and existing under the laws of Delaware, and has an address and telephone number of P.O. Box 2026, Flint, MI 48501-2026, tel. (888) 679-MERS. *mortgagee*

(D) "Lender" is COMMUNITY LENDING INCORPORATED → lender

Lender is a CALIFORNIA CORPORATION organized and existing under the laws of CALIFORNIA (corp, california)  
 Lender's address is 610 JARVIS DRIVE, SUITE 200, MORGAN HILL, CALIFORNIA 95037 *description of lender*

(E) "Note" means the promissory note signed by Borrower and dated AUGUST 8, 2006  
 The Note states that Borrower owes Lender ONE MILLION AND 00/100 Dollars (U.S. \$ 1,000,000.00) plus interest. *amount of mortgage*

Borrower has promised to pay this debt in regular Periodic Payments and to pay the debt in full not later than SEPTEMBER 1, 2036. *mature date* *end date = mature date*

(F) "Property" means the property that is described below under the heading "Transfer of Rights in the Property."

(G) "Loan" means the debt evidenced by the Note, plus interest, any prepayment charges and late charges due under the Note, and all sums due under this Security Instrument, plus interest.

Borrower Initials: *dmk akj*

 Form 3022 01/01 Page 1 of 13 *www.docmagic.com*

*look for this banner at the bottom of the page* *fannie / freddie form? yes*

(H) "Riders" means all Riders to this Security Instrument that are executed by Borrower. The following Riders are to be executed by Borrower [check box as applicable]:

checkboxes checked? yes  
any riders? yes

<input checked="" type="checkbox"/> Adjustable Rate Rider	<input type="checkbox"/> Planned Unit Development Rider
<input type="checkbox"/> Balloon Rider	<input type="checkbox"/> Biweekly Payment Rider
<input type="checkbox"/> 1-4 Family Rider	<input type="checkbox"/> Second Home Rider
<input type="checkbox"/> Condominium Rider	<input type="checkbox"/> Other(s) [specify]

(I) "Applicable Law" means all controlling applicable federal, state and local statutes, regulations, ordinances and administrative rules and orders (that have the effect of law) as well as all applicable final, non-appealable judicial opinions.

(J) "Community Association Dues, Fees, and Assessments" means all dues, fees, assessments and other charges that are imposed on Borrower or the Property by a condominium association, homeowners association or similar organization.

(K) "Electronic Funds Transfer" means any transfer of funds, other than a transaction originated by check, draft, or similar paper instrument, which is initiated through an electronic terminal, telephonic instrument, computer, or magnetic tape so as to order, instruct, or authorize a financial institution to debit or credit an account. Such term includes, but is not limited to, point-of-sale transfers, automated teller machine transactions, transfers initiated by telephone, wire transfers, and automated clearinghouse transfers.

(L) "Escrow Items" means those items that are described in Section 3.

(M) "Miscellaneous Proceeds" means any compensation, settlement, award of damages, or proceeds paid by any third party (other than insurance proceeds paid under the coverages described in Section 5) for: (i) damage to, or destruction of, the Property; (ii) condemnation or other taking of all or any part of the Property; (iii) conveyance in lieu of condemnation; or (iv) misrepresentations of, or omissions as to, the value and/or condition of the Property.

(N) "Mortgage Insurance" means insurance protecting Lender against the nonpayment of, or default on, the Loan.

(O) "Periodic Payment" means the regularly scheduled amount due for (i) principal and interest under the Note, plus (ii) any amounts under Section 3 of this Security Instrument.

(P) "RESPA" means the Real Estate Settlement Procedures Act (12 U.S.C. §2601 et seq.) and its implementing regulation, Regulation X (24 C.F.R. Part 3500), as they might be amended from time to time, or any additional or successor legislation or regulation that governs the same subject matter. As used in this Security Instrument, "RESPA" refers to all requirements and restrictions that are imposed in regard to a "federally related mortgage loan" even if the Loan does not qualify as a "federally related mortgage loan" under RESPA.

(Q) "Successor in Interest of Borrower" means any party that has taken title to the Property, whether or not that party has assumed Borrower's obligations under the Note and/or this Security Instrument.

**TRANSFER OF RIGHTS IN THE PROPERTY**

This Security Instrument secures to Lender: (i) the repayment of the Loan, and all renewals, extensions and modifications of the Note; and (ii) the performance of Borrower's covenants and agreements under this Security Instrument and the Note. For this purpose, Borrower does hereby mortgage, grant and convey to MERS (solely as nominee for Lender and Lender's successors and assigns) and to the successors and assigns of MERS, with power of sale, the following described property located in the

entitled to collect all expenses incurred in pursuing the remedies provided in this Section 22, including, but not limited to, reasonable attorneys' fees and costs of title evidence.

If Lender invokes the STATUTORY POWER OF SALE, Lender shall mail a copy of a notice of sale to Borrower, and to other persons prescribed by Applicable Law, in the manner provided by Applicable Law. Lender shall publish the notice of sale, and the Property shall be sold in the manner prescribed by Applicable Law. Lender or its designee may purchase the Property at any sale. The proceeds of the sale shall be applied in the following order: (a) to all expenses of the sale, including, but not limited to, reasonable attorneys' fees; (b) to all sums secured by this Security Instrument; and (c) any excess to the person or persons legally entitled to it.

23. Release. Upon payment of all sums secured by this Security Instrument, Lender shall discharge this Security Instrument. Borrower shall pay any recordation costs. Lender may charge Borrower a fee for releasing this Security Instrument, but only if the fee is paid to a third party for services rendered and the charging of the fee is permitted under Applicable Law.

24. Waivers. Borrower waives all rights of homestead exemption in the Property and relinquishes all rights of curtesy and dower in the Property.

BY SIGNING BELOW, Borrower accepts and agrees to the terms and covenants contained in this Security Instrument and in any Rider executed by Borrower and recorded with it.

**ADJUSTABLE RATE RIDER**

(PayOption 11th District Cost of Funds Index - Payment Caps)

THIS ADJUSTABLE RATE RIDER is made this 8th day of AUGUST 2006, and is incorporated into and shall be deemed to amend and supplement the Mortgage, Deed of Trust, or Security Deed (the "Security Instrument") of the same date given by the undersigned ("Borrower") to secure Borrower's Adjustable Rate Note (the "Note") to COMMUNITY LENDING, INCORPORATED, A CALIFORNIA CORPORATION ("Lender") of the same date and covering the property described in the Security Instrument and located at:

49 MEMERY LANE, LONGMEADOW, MASSACHUSETTS 01106  
[Property Address]

**THE NOTE CONTAINS PROVISIONS THAT WILL CHANGE THE INTEREST RATE AND THE MONTHLY PAYMENT. THERE MAY BE A LIMIT ON THE AMOUNT THAT THE MONTHLY PAYMENT CAN INCREASE OR DECREASE. THE PRINCIPAL AMOUNT TO REPAY COULD BE GREATER THAN THE AMOUNT ORIGINALLY BORROWED, BUT NOT MORE THAN THE MAXIMUM LIMIT STATED IN THE NOTE.**

**ADDITIONAL COVENANTS:** In addition to the covenants and agreements made in the Security Instrument, Borrower and Lender further covenant and agrees as follows:

**A. INTEREST RATE AND MONTHLY PAYMENT CHANGES**

The Note provides for changes in the interest rate and the monthly payments, as follows:

**2. INTEREST**

*Initial Interest Rate*

**(A) Interest Rate**

Interest will be charged on unpaid Principal until the full amount of Principal has been paid. I will pay interest at a yearly rate of 1.000%. The interest rate I will pay may change.

The interest rate required by this Section 2 is the rate I will pay both before and after any default described in Section 7(B) of the Note.

**(B) Interest Rate Change Dates**

The interest rate I will pay may change on the 1st day of OCTOBER 2006, and on that day every month thereafter. Each date on which my interest rate could change is called an "Interest Rate Change Date." The new rate of interest will become effective on each Interest Rate Change Date. The interest rate may change monthly, but the monthly payment is recalculated in accordance with Section 3.

*Initial change date*

*change rate: 1 (month)*

**(C) Index**

Beginning with the first Interest Rate Change Date, my adjustable interest rate will be based on an Index. The "Index" is the monthly weighted average cost of savings, borrowings and advances

Borrower Initials: *AMS AKT*

PayOption COFI ARM Rider

FE-5314 (0511)

of members of the Federal Home Loan Bank of San Francisco (the "Bank"), as made available by the Bank. The most recent Index figure available as of the date 15 days before each Interest Rate Change Date is called the "Current Index".

If the Index is no longer available, the Note Holder will choose a new index that is based upon comparable information. The Note Holder will give me notice of this choice.

**(D) Calculation of Interest Rate Changes**

Before each Interest Rate Change Date, the Note Holder will calculate my new interest rate by adding FOUR AND 150/1000 percentage point(s) 4.150 % ("Margin") to the Current Index. The Note Holder will then round the result of this addition to the nearest one-eighth of one percentage point (0.125%). This rounded amount will be my new interest rate until the next Interest Rate Change Date. My interest will never be greater than 9.950 %. Beginning with the first Interest Rate Change Date, my interest rate will never be lower than the Margin.

Initial change rate

highest rate

**3. PAYMENTS**

**(A) Time and Place of Payments**

I will make a payment every month.

I will make my monthly payments on the 1st day of each month beginning on OCTOBER 1, 2006 . I will make these payments every month until I have paid all the Principal and Interest and any other charges described below that I may owe under this Note. Each monthly payment will be applied as of its scheduled due date and will be applied to interest before Principal. If, on SEPTEMBER 1, 2036, I still owe amounts under this Note, I will pay those amounts in full on that date, which is called the "Maturity Date."

I will make my monthly payments at 610 JARVIS DRIVE, SUITE 200, MORGAN HILL, CALIFORNIA 95037 or at a different place if required by the Note Holder.

Balloon payment rider (unknown amount)

substantial payment at end of life of loan

**(B) Amount of My Initial Monthly Payments**

Each of my initial monthly payments until the first Payment Change Date will be in the amount of U.S.\$ 3,216.40 unless adjusted under Section 3 (F).

**(C) Payment Change Dates**

My monthly payment may change as required by Section 3(D) below beginning on the 1st day of OCTOBER, 2007 , and on that day every 12th month thereafter. Each of these dates is called a "Payment Change Date." My monthly payment also will change at any time Section 3(F) or 3(G) below requires me to pay a different monthly payment. The "Minimum Payment" is the minimum amount Note Holder will accept for my monthly payment which is determined at the last Payment Change Date or as provided in Section 3(F) or 3(G) below. If the Minimum Payment is not sufficient to cover the amount of the interest due then negative amortization will occur.

negative amortization? yes

I will pay the amount of my new Minimum Payment each month beginning on each Payment Change Date or as provided in Section 3(F) or 3(G) below.

Borrower Initials: dmk AKJ

PayOption COFI ARM Rider  
FE-5314 (0511)

Bk 16119 Pg 18 #72286

**(D) Calculation of Monthly Payment Changes**

At least 30 days before each Payment Change Date, the Note Holder will calculate the amount of the monthly payment that would be sufficient to repay the unpaid Principal that I am expected to owe at the Payment Change Date in full on the maturity date in substantially equal payments at the interest rate effective during the month preceding the Payment Change Date. The result of this calculation is called the "Full Payment." Unless Section 3(F) or 3(G) apply, the amount of my new monthly payment effective on a Payment Change Date, will not increase by more than 7.5% of my prior monthly payment. This 7.5% limitation is called the "Payment Cap." This Payment Cap applies only to the Principal and Interest payment and does not apply to any escrow payments Lender may require under the Security Instrument. The Note Holder will apply the Payment Cap by taking the amount of my Minimum Payment due the month preceding the Payment Change Date and multiplying it by the number 1.075. The result of this calculation is called the "Limited Payment." Unless Section 3(F) or 3(G) below requires me to pay a different amount, my new Minimum Payment will be the lesser of the Limited Payment and the Full Payment. I also have the option to pay the Full Payment for my monthly payment.

**(E) Additions to My Unpaid Principal**

Since my monthly payment amount changes less frequently than the interest rate, and since the monthly payment is subject to the payment limitations described in Section 3 (D), my Minimum Payment could be less than or greater than the amount of the interest portion of the monthly payment that would be sufficient to repay the unpaid Principal I owe at the monthly payment date in full on the Maturity Date in substantially equal payments. For each month that my monthly payment is less than the interest portion, the Note Holder will subtract the amount of my monthly payment from the amount of the interest portion and will add the difference to my unpaid Principal, and interest will accrue on the amount of this difference at the interest rate required by Section 2. For each month that the monthly payment is greater than the interest portion, the Note Holder will apply the payment as provided in Section 3 (A).

**(F) Limit on My Unpaid Principal; Increased Monthly Payment**

My unpaid Principal can never exceed the Maximum Limit equal to ONE HUNDRED FIFTEEN AND 000/1000 percent (115.000%) of the Principal amount I originally borrowed. My unpaid Principal could exceed that Maximum Limit due to Minimum Payments and interest rate increases. In that event, on the date that my paying my monthly payment would cause me to exceed that limit, I will instead pay a new monthly payment. This means that my monthly payment may change more frequently than annually and such payment changes will not be limited by the 7.5% Payment Cap. The new Minimum Payment will be in an amount that would be sufficient to repay my then unpaid Principal in full on the Maturity Date in substantially equal payments at the current interest rate.

**(G) Required Full Payment**

On the 5<sup>th</sup> Payment Change Date and on each succeeding fifth Payment Change Date thereafter, I will begin paying the Full Payment as my Minimum Payment until my monthly payment changes again. I also will begin paying the Full Payment as my Minimum Payment on the final Payment Change Date.

Borrower Initials: omh AKJ

PayOption COFI ARM Rider

FE-5314 (0511)

Page 3 of 5

**(H) Payment Options**

After the first Interest Rate Change Date, Lender may provide me with up to three (3) additional payment options that are **greater** than the Minimum Payment, which are called "Payment Options." I may be given the following Payment Options:

Interest only option? yes  
Pick a pay? No

- (i) **Interest Only Payment:** the amount that would pay the interest portion of the monthly payment at the current interest rate. The Principal balance will not be decreased by this Payment Option and it is only available if the interest portion exceeds the Minimum Payment.
- (ii) **Fully Amortized Payment:** the amount necessary to pay the loan off (Principal and Interest) at the Maturity Date in substantially equal payments.
- (iii) **15 Year Amortized Payment:** the amount necessary to pay the loan off (Principal and Interest) within a fifteen (15) year term from the first payment due date in substantially equal payments. This monthly payment amount is calculated on the assumption that the current rate will remain in effect for the remaining term.

These Payment Options are only applicable if they are greater than the Minimum Payment.

**B. TRANSFER OF THE PROPERTY OR A BENEFICIAL INTEREST IN BORROWER**

Section 18 of the Security Instrument entitled "Transfer of the Property or a Beneficial Interest in Borrower" is amended to read as follows:

**Transfer of the Property or a Beneficial Interest in Borrower.** As used in this Section 18, "Interest in the Property" means any legal or beneficial interest in the Property, including, but not limited to, those beneficial interests transferred in a bond for deed, contract for deed, installment sales contract or escrow agreement, the intent of which is the transfer of title by Borrower at a future date to a purchaser.

If all or any part of the Property or any Interest in the Property is sold or transferred (or if Borrower is not a natural person and a beneficial interest in Borrower is sold or transferred) without Lender's prior written consent, Lender may require immediate payment in full of all sums secured by this Security Instrument. However, this option shall not be exercised by Lender if such exercise is prohibited by Applicable Law. Lender also shall not exercise this option if: (a) Borrower causes to be submitted to Lender information required by Lender to evaluate the intended transferee as if a new loan were being made to the transferee; and (b) Lender reasonably determines that Lender's security will not be impaired by the loan assumption and that the risk of a breach of any covenant or agreement in this Security Instrument is acceptable to Lender.

To the extent permitted by Applicable Law, Lender may charge a reasonable fee as a condition to Lender's consent to the loan assumption. Lender may also require the transferee to sign an assumption agreement that is acceptable to Lender and that

Borrower Initials:           jms AKJ          

PayOption COFI ARM Rider  
FE-5314 (0511)

Bk 16119 Pg 20 #72286

obligates the transferee to keep all the promises and agreements made in the Note and in this Security Instrument. Borrower will continue to be obligated under the Note and this Security Instrument unless Lender releases Borrower in writing.

If Lender exercises the option to require immediate payment in full, Lender shall give Borrower notice of acceleration. The notice shall provide a period of not less than 30 days from the date the notice is given in accordance with Section 15 within which Borrower must pay all sums secured by this Security Instrument. If Borrower fails to pay these sums prior to the expiration of this period, Lender may invoke any remedies permitted by this Security Instrument without further notice or demand on Borrower.

BY SIGNING BELOW, Borrower accepts and agrees to the terms and covenants contained in this Adjustable Rate Rider.

## Additional Document Examples

The following documents are additional examples of Affidavits, Assignments of Mortgage, and two examples of full suites of foreclosure documents. These examples lack the additional green notes, but have important information highlighted and annotated in red.

## Affidavits

The previous section containing documents with additional notes has an example of a 35B&35C Affidavit. This section contains examples of 35B, Pinti, and Eaton/Pinti Affidavits.

Some information about different types of affidavits:

- 35B: refers to Massachusetts General Law Chapter 244, Section 35B. Generally, the affiant swears that the requirements of 35B have been complied with, or that 35B is not applicable. 35B requires that a notice of the right to pursue a mortgage loan modification is sent to the borrower.
- 35C/Eaton/Note: refers to Massachusetts General Law Chapter 244, Section 35C. Generally, the affiant is swearing that the foreclosing mortgagee possesses the note or is the authorized agent of the holder of the note.
- Pinti: generally, states that the affiant swears that 1) the notice of default required under the terms of the foreclosure mortgage was sent by a specified time, or 2) that all notices were made in compliance with terms of the mortgage.
- 35B&35C: refers to Massachusetts General Law Chapter 244, Sections 35B and 35C. As listed above, 35B relates to the notice of the right of the borrower to pursue a mortgage loan modification. Likewise, 35C relates to the possession of the note by the foreclosing mortgagee.

**Mortgage:** Mortgage from Keith W. McKenzie and Paulette McKenzie to Option One Mortgage Corporation, a California Corporation, dated January 15, 2004 and recorded with the Worcester County (Worcester) Registry of Deeds at Book 32681, Page 225, assigned to HSBC Bank USA, National Association, as trustee for ACE Securities Corp. Home Equity Loan Trust, Series 2004-OP1 Asset Backed Pass-Through Certificates by assignment recorded in said Registry of Deeds in Book 45773, Page 244.

**Foreclosing Mortgagee:** HSBC Bank USA, National Association, as trustee for ACE Securities Corp. Home Equity Loan Trust, Series 2004-OP1 Asset Backed Pass-Through Certificates

The undersigned, Marjorie Timmerman, having personal knowledge of the facts herein stated, under oath deposes and says as follows:

- I am:
  - An officer or employee of Foreclosing Mortgagee, where I hold the office of \_\_\_\_\_
  - An officer or employee of a duly authorized agent of Foreclosing Mortgagee.
- In my capacity as Contract Management Coordinator (title), I am familiar with the business records of Ocwen Loan Servicing, LLC as they relate to servicing of the Mortgage Loan which is the subject of this affidavit. Ocwen Loan Servicing, LLC's records are reliable because they are kept in the ordinary course of business by persons who have a business duty to make such records. The records are made at or near the occurrence of events so recorded. To the extent records related to the loan come from another entity, those records were received by Ocwen Loan Servicing, LLC in the ordinary course of its servicing business, have been incorporated into and maintained as part of Ocwen Loan Servicing, LLC's business records, and have been relied on by Ocwen Loan Servicing, LLC. It is the regular practice of Ocwen Loan Servicing, LLC in its mortgage servicing business to make and maintain these records. I have personal knowledge of the facts set forth in this affidavit based upon my review of Ocwen Loan Servicing, LLC's business records maintained in connection with the Mortgage and the related Mortgage loan account whose repayment the Mortgage secures.
- Based upon my review of the business records of Ocwen Loan Servicing, LLC, I certify that:
  - The requirements of M.G.L. c.244 sec.35B have been complied with.
  - G.L. C244 Section 35B is not applicable to the above mortgage. (loan was not offered)

← affiant

The undersigned, Diana L. Shaner, having personal knowledge of the facts herein stated, under oath deposes and says as follows:

- 1. I am an officer or employee of Rushmore Loan Management Services, LLC , a duly authorized agent of Foreclosing Mortgagee, where I hold the office or title of Assistant Secretary.

→ affiant organization is servicer? yes

Rushmore Loan Management Services, LLC is the current servicer of the above-referenced mortgage loan.

- 2. In the regular course of my job responsibilities, I am familiar with Rushmore Loan Management Services, LLC 's business processes and procedures and the methods by which Rushmore Loan Management Services, LLC 's business records are made and maintained. I have acquired personal knowledge of the information contained in this affidavit as a result of my review of Rushmore Loan Management Services, LLC 's business records pertaining to the above-referenced mortgage, which include data compilations, electronically imaged documents, and servicing and loan payment histories.

Bk: 59260 Pg: 329

affiant saw original? No  
 claims loan offered? No  
 mortgagee claims note? No } N/A to pinti

These records are reliable because they are made at or near the time of the activity and transactions reflected in the records, by or from information transmitted by persons with knowledge of the activity and transactions, and are kept in the course of Rushmore Loan Management Services, LLC 's regularly conducted business activities. To the extent records related to the loan come from another entity, those records have been integrated into and are now a part of Rushmore Loan Management Services, LLC 's business records maintained in the ordinary course, and have been relied on by Rushmore Loan Management Services, LLC . It is the regular practice of Rushmore Loan Management Services, LLC to make and maintain these records as part of its mortgage servicing obligations and operations.

3. Based upon my review of the business records of Rushmore Loan Management Services, LLC , I certify that prior to the date when the notices were mailed and published pursuant to M.G.L. Chapter 244, Section 14: [Check One]

- Notice(s) of Default to Mortgagor(s) has/have been given by the then holder of the note secured by said mortgage or its duly authorized agent in strict compliance with the terms and conditions precedent in the mortgage to acceleration and sale contained in the mortgage;
- Notice(s) of Default to Mortgagor(s) were not required to comply strictly with the notice requirements set forth in the mortgage because the notices were sent on or before July 17, 2015;
- The mortgage contains no notice requirements.

mortgagee

Foreclosure Sale Date: June 18, 2019

affiant

The undersigned, Bertha Vanessa Acosta, having personal knowledge of the facts herein stated, under oath deposes and says as follows:

personal knowledge? talk to an advocate before answering

affiant organization is servicer? yes

- I am a Document Control Officer, of Select Portfolio Servicing, Inc. ("SPS") attorney-in-fact and duly authorized agent for The Bank of New York Mellon, f/k/a, the Bank of New York as Trustee, on behalf of the registered holders of Alternative Loan Trust 2005-66, Mortgage Pass-Through Certificates, Series 2005-66, the Foreclosing Mortgagee.
- As a mortgage servicer, SPS collects payments from borrowers and maintains up-to-date electronic records concerning the loans it services in its electronic record-keeping system. I have access to SPS's business records, including the business records for and relating to the subject loan. I make this affidavit based upon my review of those records relating to the Borrower(s)'s loan and from my own personal knowledge of how the records are kept and maintained. The loan records are maintained by SPS in the course of its regularly conducted business activities and are made at or near the time of the event, by or from information transmitted by a person with personal knowledge. It is the regular practice to keep such records in the ordinary course of a regularly conducted business activity.
- To the extent that the business records of the loan in this matter were created by a prior servicer, the prior servicer's records for the loan were integrated and boarded into SPS's systems, such that the prior servicer's records concerning the loan are now part of SPS's business records. SPS maintains quality control and verification procedures as part of the boarding process to ensure the accuracy of the boarded records. It is the regular practice of SPS to integrate prior servicers' records into SPS's business records, and to rely upon the accuracy of those boarded records in providing its loan servicing functions. These prior servicer records are integrated and relied upon by SPS as part of SPS's business records.
- Based upon my review of SPS's business records, I certify that as of the date when the Notice of Sale relating to the above-referenced mortgage were mailed and published and up to and including the foreclosure sale date, The Bank of New York Mellon, f/k/a, the Bank of New York as Trustee, on behalf of the registered holders of Alternative Loan Trust 2005-66, Mortgage Pass-Through Certificates, Series 2005-66 was

mortgagee claims note? yes

- the holder of the promissory note secured by the above-referenced mortgage.
- the authorized agent of the holder of the promissory note secured by the above-referenced mortgage.

claims loan offered? No  
(N/A to this type of affidavit)

5. Based upon my review of SPS's business records, I certify that prior to mailing the Notices of Sale:

- The Notice(s) of Default to Mortgagor(s) were sent in strict compliance with the terms and conditions precedent in the mortgage to acceleration and sale. I further certify:
  - a. The Notice(s) was mailed to the Mortgagor(s) on August 22, 2016 and specified the default.
  - b. The Notice(s) specified the action required to cure the default.
  - c. The Notice(s) specified a date, not less than 30 days from the date of Notice being mailed to the Borrower, by which the default must be cured.
  - d. The Notice(s) informed the Mortgagor(s) that failure to cure the default on or before the date specified in the Notice may result in acceleration of the sums secured by the Mortgage and sale of the property secured by the Mortgage.
  - e. The Notice(s) informed the Mortgagor(s) of the right to reinstate after acceleration and the right to bring a court action to assert the non-existence of a default or other defense to acceleration and sale.
  - f. The Notice(s) informed the Mortgagor(s) that if the default is not cured on or before the date specified in the notice, the Lender at its option may require immediate payment in full of all sums secured by the Mortgage without further demand and may invoke the Statutory Power of Sale and any other remedies permitted by Applicable Law. The Notice further informed the Lender shall be entitled to collect all expenses incurred in pursuing the remedies provided above, including but not limited to reasonable attorneys' fees and costs of title evidence.
    - The Notice(s) of Default to Mortgagor(s) pursuant to the terms and conditions precedent in the mortgage to acceleration and sale was sent on or before July 17, 2015.
    - The mortgage contains no conditions precedent in the mortgage to acceleration and sale.

Signed under the pains and penalties of perjury this 16<sup>th</sup> day of July, 2019.

Plaintiff

**COMPLAINT TO DETERMINE MILITARY STATUS**

v.

**Felipe Araya Individually and as Personal Representative of the Estate of Maria Elena Rojas**  
Defendant

→ \*Interest in a/the mortgage\*? yes

→ (original mortgage, NOT current)

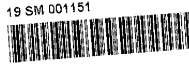

- Your Plaintiff has an interest in a mortgage with the statutory power of sale given by Maria Rojas to National City Mortgage Co., dated March 31, 2004, recorded or filed at Essex County (Southern District) Registry of Deeds in Book 22618, Page 230, covering 73 O'Callaghan Way, Lynn, and more particularly described in said mortgage.  
↳ address
- No Defendant(s) is/are in the military service within the meaning of the Servicemembers Civil Relief Act, 50 U.S.C. c. 50 §3901 (et seq)
- The Plaintiff alleges on information and belief that the Defendant(s) is/are the only person(s) holding the equity of redemption of the property covered by the mortgage described in Paragraph 1 of this Complaint so far as appears of record in the said Registry of Deeds and as known to your plaintiff.
- The holder of the mortgage seeks to proceed with the foreclosure of said mortgage described in Paragraph 1 to protect its interest as secured thereby for breach of the conditions thereof and desires to comply with the provisions of the Servicemembers Civil Relief Act

Wherefore your plaintiff prays:

- For an order of notice ordering the Defendant(s) to appear and answer this complaint if Defendant(s) is/are now, or recently have been, in the active military service and claim the benefits of the Servicemembers Civil Relief Act.
- For a judgment declaring that the Defendant(s) is/are not entitled to the benefits of the Servicemembers Civil Relief Act.

LIMITED POWER OF ATTORNEY

grantor 1 ← The trusts identified on the attached Schedule A (the "Trusts"), by and through U.S. Bank National Association, a national banking association organized and existing under the laws of the United States and having an office at 60 Livingston Avenue, EP-MN-WS3D, St. Paul, MN 55107, not in its individual capacity but solely as Trustee ("Trustee"), hereby constitutes and appoints NewRez LLC, f/k/a New Penn Financial, LLC, d/b/a Shellpoint Mortgage Servicing ("Servicer"), and in its name, aforesaid Attorney-In-Fact, by and through any officer appointed by the Board of Directors of Servicer, to execute and acknowledge in writing or by facsimile stamp all documents customarily and reasonably necessary and appropriate for the tasks described in the items (1) through (12) below; provided however, that (a) the documents described below may only be executed and delivered by such Attorneys-In-Fact if such documents are required or permitted under the terms of the related servicing agreements, (b) all actions taken by Servicer pursuant to this Limited Power of Attorney must be in accordance with Federal, State and local laws and procedures, as applicable and (c) no power is granted hereunder to take any action that would be either adverse to the interests of or be in the name of U.S. Bank National Association in its individual capacity. This Limited Power of Attorney is being issued in connection with Servicer's responsibilities to service certain mortgage loans (the "Loans") held by the Trustee. These Loans are secured by collateral comprised of mortgages, deeds of trust, deeds to secure debt and other forms of security instruments (collectively the "Security Instruments") encumbering any and all real and personal property delineated therein (the "Property") and the Notes secured thereby. Please refer to Schedule A attached hereto. → grantee 1

1. Demand, sue for, recover, collect and receive each and every sum of money, debt, account and interest (which now is, or hereafter shall become due and payable) belonging to or claimed by the Trustee, and to use or take any lawful means for recovery by legal process or otherwise, including but not limited to the substitution of trustee serving under a Deed of Trust, the preparation and issuance of statements of breach, notices of default, and/or notices of sale, accepting deeds in lieu of foreclosure, evicting (to the extent allowed by federal, state or local laws) foreclosing on the properties under the Security Instruments by judicial or non-judicial foreclosure, actions for temporary restraining orders, injunctions, appointments of receiver, suits for waste, fraud and any and all other tort, contractual or verifications in support thereof, as may be necessary or advisable in any bankruptcy action, state or federal suit or any other action.
2. Execute and/or file such documents and take such other action as is proper and necessary to defend the Trustee in litigation and to resolve any litigation where the Servicer has an

File Number: 2020-00003543 Seq: 5

Page 6 of 12

- obligation to defend the Trustee, including but not limited to dismissal, termination, cancellation, rescission and settlement.
3. Transact business of any kind regarding the Loans, as the Trustee's act and deed, to contract for, purchase, receive and take possession and evidence of title in and to the Property and/or to secure payment of a promissory note or performance of any obligation or agreement relating thereto.
  4. Execute, complete, indorse or file bonds, notes, mortgages, deeds of trust and other contracts, agreements and instruments regarding the borrowers and/or the Property, including but not limited to the execution of estoppel certificates, financing statements, continuation statements, releases, satisfactions, reconveyances, assignments, loan modification agreements, payment plans, waivers, consents, amendments, forbearance agreements, loan assumption agreements, subordination agreements, property adjustment agreements, management agreements, listing agreements, purchase and sale agreements, short sale transactions and other instruments pertaining to mortgages or deeds of trust, and execution of deeds and associated instruments, if any, conveying the Property, in the interest of the Trustee.
  5. Endorse on behalf of the undersigned all checks, drafts and/or other negotiable instruments made payable to the undersigned.
  6. Execute any document or perform any act in connection with the administration of any PMI policy or LPMI policy, hazard or other insurance claim relative to the Loans or related Property.
  7. Execute any document or perform any act described in items (3), (4), and (5) in connection with the termination of any Trust as necessary to transfer ownership of the affected Loans to the entity (or its designee or assignee) possessing the right to obtain ownership of the Loans.
  8. Subordinate the lien of a mortgage, deed of trust, or deed or other security instrument to secure debt (i) for the purpose of refinancing Loans, where applicable, or (ii) to an easement in favor of a public utility company or a government agency or unit with powers of eminent domain, including but not limited to the execution of partial satisfactions and releases and partial reconveyances reasonably required for such purpose, and the execution or requests to the trustees to accomplish the same.
  9. Convey the Property to the mortgage insurer, or close the title to the Property to be acquired as real estate owned, or convey title to real estate owned property ("REO Property").
  10. Execute and deliver any documentation with respect to the sale, maintenance, preservation, renovation, repair, demolition or other disposition, of REO Property acquired through a foreclosure or deed-in-lieu of foreclosure, including, without limitation: permits, remediation plans or agreements, certifications, compliance certificates, health and safety certifications, listing agreements; purchase and sale agreements; grant / limited or special warranty / quit claim deeds or any other deed, but not general warranty deeds, causing the transfer of title of the property to a party contracted to purchase same; escrow instructions; and any and all documents necessary to effect the transfer of REO Property.

File Number: 2020-00003543 Seq: 6

Page 7 of 12

11. Servicer has the power to execute additional limited powers of attorney and delegate the authority given to it by U.S. Bank National Association, as Trustee, under the applicable servicing agreements for the Trusts listed on Schedule A, attached.
12. To execute, record, file and/or deliver any and all documents of any kind for the purpose of fulfilling any servicing duties, including but not limited to those listed in subparagraphs (1) through (11), above, where Trustee's interest is designated, stated, characterized as or includes any reference to one or more of the following: "Indenture Trustee", "Owner Trustee", "Delaware Trustee", "Successor Trustee", "Successor in Interest", "Successor to", "Successor by Merger", "Trustee/Custodian", "Custodian/Trustee" or other similar designation.

Trustee also grants unto Servicer the full power and authority to correct ambiguities and errors in documents necessary to effect or undertake any of the items or powers set forth in items (1) to (12), above.

In addition to the indemnification provisions set forth in the applicable servicing agreements for the Trusts listed on Schedule A, attached, Servicer hereby agrees to indemnify and hold the Trustee, and its directors, officers, employees and agents harmless from and against any and all liabilities, obligations, losses, damages, penalties, actions, judgments, suits, costs, expenses or disbursements of any kind or nature whatsoever incurred by reason or result of the misuse of this Limited Power of Attorney by the Servicer. The foregoing indemnity shall survive the termination of this Limited Power of Attorney and the related servicing agreements or the earlier resignation or removal of the Trustee for the Trusts listed on Schedule A.

LIMITED POWER OF ATTORNEY

KNOW ALL MEN BY THESE PRESENTS, that pursuant to the authority granted under that certain limited power of attorney attached as Exhibit A (the "Limited POA"), NewRez LLC, f/k/a New Penn Financial, LLC, d/b/a Shellpoint Mortgage Servicing (the "Company"), in its capacity as Servicer, having a place of business at 75 Beattie Place, Suite 300, Greenville, SC 29601, does hereby further constitute and appoint PHH Mortgage Corporation successor by merger to Ocwen Loan Servicing LLC, a Delaware limited liability company ("PHH Mortgage"), having an office at 1661 Worthington Rd, Ste. 100, West Palm Beach, FL 33409, by and through its officers, its true and lawful Attorney-in-Fact, in its name, place and stead and for its benefit, in connection with the Subservicing Agreement, dated as of August 17, 2018, by and between New Penn Financial, LLC d/b/a Shellpoint Mortgage Servicing and Ocwen Loan Servicing, LLC, ("Agreement").

grantor 1

grantee 1

125c

Pursuant to the authority granted under the Limited POA, the Company hereby further grants its authority and power to execute any and all such instruments and to do and perform all and every act and thing necessary and proper to carry into effect the powers granted by or under this Limited Power of Attorney as fully as the undersigned might or could do under the Limited POA, and hereby does ratify and confirm all that PHH Mortgage shall lawfully do or cause to be done by authority hereof. The undersigned also grants unto said Attorney-in-fact, subject to the foregoing limitations, the full power and authority to correct minor ambiguities and errors in documents necessary to effect the above, for the purpose of performing all acts and executing all documents in the name of the Company necessary and incidental to the servicing of said loans, including but not limited to:

1. Foreclosing delinquent loans or discontinuing such foreclosure proceedings, including, but not limited to, the execution of notices of default, notices of sale, assignments of bids, and assignments of deficiency judgments, and appearing in the prosecuting bankruptcy proceedings;
2. Selling, transferring or otherwise disposing of real property acquired through foreclosure or otherwise, including, but not limited to, executing all contracts, agreements, deeds, assignments or other instruments necessary to effect such sale, transfer or disposition, and

2. receiving proceeds and endorsing checks made payable to the order of the Company from such proceedings;
3. Facilitation of an eviction according to the state law of occupants for properties;
4. Preparing, executing, and delivering satisfactions, cancellations, discharges, lost note instruments, or full or partial releases of lien, subordination agreements, modification agreements, assumption agreements, substitutions of trustees under deeds of trust, and UCC-3 Continuation Statements;
5. Endorsing promissory notes and executing assignments of mortgages, deeds of trust, deeds to secure debt, and other security instruments securing said promissory notes in connection with loans for which PHH Mortgage has received full payment of all outstanding amounts due on behalf of the Company;
6. Endorsing insurance proceeds checks and mortgage payment checks to the order of the Company; and
7. Any and all such other acts of any kind and nature whatsoever that are necessary and prudent to service the loans in accordance with the Agreement.

The Company further grants to PHH Mortgage full power and authority to do and perform all acts necessary for PHH Mortgage to carry into effect the power or powers granted by or under this Limited Power of Attorney as fully as the Company might or could do with the same validity as if all and every such act had been herein particularly stated, expressed and especially provided for, and hereby ratifies and confirms all that PHH Mortgage shall lawfully do by virtue of the powers and authority granted and contemplated hereby, and all that PHH Mortgage has previously done pursuant to or in connection with the Servicing Agreement or any Limited Power of Attorney previously granted by the Company to PHH Mortgage. This Limited Power of Attorney shall be in full force and effect as of July 11, 2019 until revoked or terminated by the Company.

Nothing herein shall give the attorney-in-fact hereunder the right or power to negotiate or settle any suit, counterclaim or action against the Company. The Company shall have no obligation to inspect or review any agreement or other document or item executed by the attorney-in-fact hereunder on behalf of the Company pursuant to this Limited Power of Attorney and as such, the attorney-in-fact hereunder expressly acknowledges that the Company is relying upon such attorney-in-fact to undertake any and all necessary procedures to confirm the accuracy of any such agreement, document or other item.

Third parties without actual notice may rely upon the exercise of the power granted under this Limited Power of Attorney, and may be satisfied that this Limited Power of Attorney has not been revoked by the Company, unless a revocation has been recorded in the public records of the jurisdiction where this Limited Power of Attorney has been recorded, or unless such third party has received actual written notice of a revocation.

The rights, powers and authority of said attorney-in-fact herein granted shall commence and be in full force and effect as the date hereof until the filing at the Registry District of the Land Court or the recording with the Registry of Deeds in which the Power of Attorney is filed or recorded as applicable of a revocation of authority under this Power of Attorney relative to the Law Firm, while hereby ratifying and confirming any and all of the enumerated actions herein, taken by the Law Firm prior to the date hereof. Any party dealing in good faith with the Law Firm shall be entitled to rely upon a photostatic copy of this instrument and upon the statement or certificate of the Law Firm that this Power of Attorney is still in force and effect, has not been revoked and that the party acting hereunder as an officer, director, employee, agent or assignee of the Law Firm has been duly authorized by the undersigned and by the Law Firm. No party dealing with the Law Firm shall be required to look to the application of anything paid or transferred to it nor shall any person dealing with the Law Firm be required to determine the existence of any facts justifying the exercise by the Law Firm of the authority granted pursuant hereto.

**Affidavit of Sale**

I, Julie Moran, Esq., Employee, Authorized Signatory, Real Property of Orlans PC, as attorney for U.S. Bank National Association, as Trustee for Citigroup Mortgage Loan Trust Inc. Mortgage Pass-Through Certificates Series 2004-NCM1 ("Lender") named in the foregoing deed, make oath and say that the principal, interest and other obligations mentioned in mortgage from above referred to were not paid or tendered or performed when due or prior to the sale, and that this office caused to be published on the 9th day of December, 2019, on the 16th day of December, 2019 and on the 23rd day of December, 2019, in the Lynn Daily Evening Item (The Daily Item), a newspaper with general circulation in Lynn, a copy of which is attached hereto as Exhibit A.

This office has complied with Chapter 244, Section 14 of Massachusetts General Laws, as amended, by mailing the required notices by certified mail, return receipt requested. This office has complied with 26 USC §7425 (c) by mailing the required notices to the IRS by certified mail, return receipt requested.

This office has complied with Chapter 209, Section 18.21A of Code of Massachusetts Regulations, as amended, by mailing the required certification and supporting documentation by certified mail, return receipt requested.

Pursuant to said notice at the time and place therein appointed, the Lender sold the mortgaged premises at public auction by Paulo Adams, a licensed auctioneer, of Towne Auction Company LLC, to the highest bidder Samuel Roman, with an address of 110 Grant Street, Lynn, MA 01904, for the sum of THREE HUNDRED NINE THOUSAND DOLLARS AND 00/100 (\$309,000.00) paid, being the highest bid made therefor at said auction.

Said bid was then assigned to Ever Zavala and Jose Argueta, as Tenants in Common, as evidenced by Assignment of Bid recorded herewith

**LEGALS**

**MORTGAGEE'S NOTICE OF SALE OF REAL ESTATE**

By writup and in execution of the Power of Sale contained in a certain Mortgage given by Maria Rojas to National City Mortgage Co., dated March 31, 2004 and recorded with the Essex County (Southern District) Registry of Deeds at Book 22618, Page 230, subsequently assigned to Downen Loan Servicing, LLC by PNC Bank, National Association, successor in interest to National City Real Estate Services, LLC, successor by merger to National City Mortgage, Inc., formerly known as National City Mortgage Co., by assignment recorded in said Essex County (Southern District) Registry of Deeds at Book 32691, Page 532, subsequently assigned to U.S. Bank National Association, as Trustee for Citigroup Mortgage Loan Trust, Inc. Mortgage Pass-Through Certificates Series 2004-NCM4, by Downen Loan Servicing, LLC by assignment recorded in said Essex County (Southern District) Registry of Deeds at Book 37147, Page 424 for breach of the conditions of said Mortgage and for the purpose of foreclosing same will be sold at Public Auction at 10:00 AM on December 16, 2019 at 73 O'Callaghan Way, Lynn, MA, at said premises described in said Mortgage, to wit:

The (and in Lynn, Essex County, Massachusetts, together with the buildings thereon, bounded and described as follows: SOUTHEASTERLY by O'Callaghan Way, shown on the plan hereinafter mentioned as Kippar Avenue, 50 feet; SOUTHERLY by land now or formerly of Pkw. 74.48 feet; SOUTHWESTERLY by Lot 14 of said plan, 88.84 feet; NORTHWESTERLY by Lots 15 and 16 on said plan, 73.34 feet and NORTHWESTERLY by Lot 25 on said plan, 116.78 feet, be all of said measurements more or less, of however otherwise bounded and described; being the premises shown as Lot 25 on a Plan of Land in Lynn, Massachusetts dated June 27, 1924, by John W. Parsons, Surveyor, recorded with Essex South District Deeds, Book 4052, Page 152, and containing 10,410 square feet of land according to said plan. Said premises are conveyed subject to the zoning ordinances of the City of Lynn. FOR TITLE REFERENCE SEE DEED RECORDED at Book 15983, Page 279.

The premises are to be sold subject to and with the benefit of all easements, restrictions, encroachments, building and zoning laws, liens, unpaid taxes, tax files, water bills, municipal liens and assessments, rights of tenants and parties in possession, and attorney's fees and costs.

**TERMS OF SALE:**  
A deposit of FIVE THOUSAND DOLLARS AND 00 CENTS (\$5,000.00) in the form of a certified check, bank treasurer's check or money order will be required to be delivered at or before the time the bid is offered. The successful bidder will be required to execute a Foreclosure Sale Agreement immediately after the close of the bidding. The balance of the purchase price shall be paid within thirty (30) days from the sale date in the form of a certified check, bank treasurer's check or other check satisfactory to Mortgagee's attorney. The Mortgagee reserves the right to bid at the sale, to reject any and all bids, to continue the sale and to amend the terms of the sale by written or oral announcement made before or during the foreclosure sale. If the sale is set aside for any reason, the Purchaser at the sale shall be entitled only to a return of the deposit paid. The purchaser shall have no further recourse against the Mortgagor, the Mortgagee or the Mortgagee's attorney. The description of the premises contained in said mortgage shall control in the event of an error in this publication. **TIME WILL BE OF THE ESSENCE.**

Other terms, if any, to be announced at the sale.

address

1. Your Plaintiff has an interest in a mortgage with the statutory power of sale given by John J. Hart to Mortgage Electronic Registration Systems, Inc. as nominee for Freedom Mortgage Corporation, dated September 24, 2008, recorded at Essex County (Southern District) Registry of Deeds in Book 28055, Page 221, covering 37 Murray Street, Lynn, and more particularly described in said mortgage. (original mortgagee, NOT Current)
2. No Defendant(s) is/are in the military service within the meaning of the Servicemembers Civil Relief Act, 50 U.S.C. App. § 3901 (et seq)
3. The Plaintiff alleges on information and belief that the Defendant(s) is/are the only person(s) holding the equity of redemption of the property covered by the mortgage described in Paragraph 1 of this Complaint so far as appears of record in the said Registry of Deeds and as known to your plaintiff.
4. The holder of the mortgage seeks to proceed with the foreclosure of said mortgage described in Paragraph 1 to protect its interest as secured thereby for breach of the conditions thereof and desires to comply with the provisions of the Servicemembers Civil Relief Act.

Wherefore your plaintiff prays:

Box 193

1. For an order of notice ordering the defendant(s) to appear and answer this complaint if defendant(s) is/are now, or recently have been, in the active military service and claim the benefits of the Servicemembers Civil Relief Act.
2. For a judgment declaring that the Defendant(s) is/are not entitled to the benefits of the Servicemembers Civil Relief Act.

CERTIFICATE OF ACKNOWLEDGMENT

State of California  
County of Orange

On July 2<sup>nd</sup>, 2019, before me, Kameron Thissell, Notary Public, personally appeared, Elizabeth A Ostermann, who proved to me on the basis of satisfactory evidence to be the person whose name is subscribed to the within instrument and acknowledged to me that she executed the same in her authorized capacity, and that by his signature on the instrument the person, or the entity upon behalf of which the person acted, executed the instrument.

I certify under PENALTY OF PERJURY under the laws of the State of California that the foregoing paragraph is true and correct.

WITNESS my hand and official seal.

Signature [Signature] (Seal)  
Kameron Thissell

- INSTRUCTIONS FOR COMPLETING THIS FORM**  
Any acknowledgment completed in California must contain verbiage exactly as appears above in the many sections on a separate acknowledgment form must be properly completed and attached to this document. The only exception is if a document is in the recorded records of California, in such instances, our observance acknowledgment verbiage as may be printed on such a document so long as the verbiage does not require the notary to do something that is illegal for a notary in California (i.e. certifying the authorized capacity of the signers). Please check the document carefully for proper verbiage wording and attach this form if required.
- State and County information must be the State and County where the document signer(s) personally appeared before the notary public for acknowledgment.
  - Date of notarization must be the date that the signer(s) personally appeared which must also be the same date the acknowledgment is completed.
  - The notary public must print his or her name as it appears within his or her commission followed by a comma and then your title (notary public).
  - Print the name(s) of document signer(s) who personally appear at the time of notarization.
  - Indicate the correct singular or plural form by crossing off incorrect forms (i.e. he/she/they is/are) by circling the correct form. Failure to correctly indicate this information may lead to rejection of document recording.
  - The notary seal impressions must be clear and photographically reproducible. Impressions must not cover text or lines. If seal impressions smudged, re-seal if a sufficient area remains; otherwise complete a different acknowledgment form.
  - Signature of the notary public must match the signature on file with the office of the county clerk.
    - Additional information is not required but could help to ensure this acknowledgment is not misused or attached to a different document.
    - ◊ Indicate title or type of attached document, number of pages and date.
    - ◊ Indicate the capacity claimed by the signer. If the claimed capacity is a corporate officer, indicate the title (i.e. CEO, CFO, Secretary).
  - Securely attach this document to the signed document

CHAPTER 183 SEC. 6 AS AMENDED BY CHAPTER 497 OF 1969

Every deed presented for record shall contain or have endorsed upon it the full name, residence and post office address of the grantee and a recital of the amount of the full consideration thereof in dollars or the nature of the other consideration thereof, if not delivered for a specific monetary sum. The full consideration shall mean the total price for the conveyance without deduction for any liens or encumbrances assumed by the grantee or remaining thereon. All such endorsements and recitals shall be recorded as part of the deed. Failure to comply with this section shall not affect the validity of any deed. No register of deeds shall accept a deed for recording unless it is in compliance with the requirements of this section.

A notary public or other officer completing this certificate verifies only the identity of the individual who signed the document, to which this certificate is attached, and not the truthfulness, accuracy, or validity of that document.
