

Acknowledgements

The work described in this report would have not been possible without the contributions of Venkatesh Raghavan, Ph.D. candidate at WPI. I would like to acknowledge his important contributions to this research and thank him for all the help provided.

I would also like to thank my advisor, Prof. Elke Rundensteiner, for her constant encouragement, great support and immense help throughout the MQP. The MQP could not have been successful without her mentoring, technical contributions and expertise in this area. I am also thankful for all the opportunities that she has made available to me through this research.

I would like to express my deepest gratitude towards my parents and brother who have stood by me all the time and encouraged me to follow my dreams. I attribute all my achievements to them. I also thank Ashutosh for his understanding and steady support.

Lastly, I'd like to thank WPI, CRA-W, GHC and SIGMOD for giving me numerous opportunities to present this research at various avenues and to take the research to the next level.

Sincerely,

Manasi Vartak
