*Abstract*

*This project introduces SourceForge to the WPI community. SourceForge is a secure, centralized solution for optimizing and managing distributed project development. To substantiate its introduction, a vigorous feasibility study was embarked on. Based on the survey, it was clearly evident that SourceForge should be introduced to the WPI community so that projects could be efficiently managed, instead of using poorly-designed consolidating software.*

*In view of this, clear-cut procedures and videos are produced to guide individuals in the usage of SourceForge.*
